## SAFETY INSTRUCTIONS

To prevent injury and property damage, follow these instructions during the installation and operation of the inverter.

Incorrect operation due to ignoring these instructions may cause harm or damage. The following symbols are used throughout the manual to highlight important information.

## DANGER

This symbol indicates death or serious injury can occur if you do not follow instructions.

WARNING
This symbol indicates the possibility of death or serious injury.

CAUTION
This symbol indicates the possibility of damage to the inverter or other components.

The meaning of each symbol in this manual and on your equipment is as follows.

This is the safety alert symbol.
Read and follow instructions carefully to avoid a dangerous situation.This symbol alerts the user to the presence of "dangerous voltage" inside the product that might cause bodily harm or electric shock.

This manual should be placed in a location where it can be accessed by users.

This manual should be given to the person who actually uses the inverter and is responsible for its maintenance.

## WARNING

- Do not remove the cover while power is applied or the unit is in operation.
Otherwise, electric shock could occur.
- Do not operate the inverter with the front cover removed. Otherwise, electric shock can occur due to the exposed terminals and bus bars.
- Do not remove the cover except for periodic inspections or wiring, even if the input power is not applied
Otherwise, electric shock can occur due to accessing capacitor banks
- Wiring and periodic inspections should be performed at least 10 minutes after disconnecting the input power and after checking the DC link voltage is discharged with a meter (below 30VDC).
Otherwise, electric shock could occur.
- Operate the switches with dry hands.

Otherwise, electric shock could occur.

- Do not use the cable when its insulating tube is damaged.

Otherwise, electric shock could occur.

- Do not subject the cables to scratches, excessive stress, heavy loads or pinching.
Otherwise, electric shock could occur.

## CAUTION

- Install the inverter on a non-flammable surface. Do not place flammable materials nearby.
Otherwise, fire could occur.
- Disconnect the input power if the inverter has been damaged

Otherwise, it could result in a secondary accident and fire

- Do not touch the inverter after shutting down or disconnecting it. It will remain hot for a couple of minutes.
Otherwise, bodily injuries such as skin-burn or damage could occur.
- Do not apply power to a damaged inverter or to an inverter with parts missing even if the installation is complete.
Otherwise, electric shock could occur.
- Do not allow lint, paper, wood chips, dust, metallic chips or other foreign material into the drive.
Otherwise, fire or accident could occur.

## OPERATING PRECAUTIONS

(1) Handling and installation

- The iP5A series inverter can be heavy. Lift according to the weight of the product. Use a hoist or crane to move and install the iP5A series inverter if necessary. Failure to do so may result in personal injury or damage to the inverter.
- Do not stack the inverter boxes higher than the number recommended.
- Install the inverter according to instructions specified in this manual.
- Do not open the cover during delivery.
- Do not place heavy items on the inverter.
- Check that the inverter mounting orientation is correct.
- Do not drop the inverter, or subject it to hard impact.
- Verify the ground impedance 100 ohm or less for 230 V Class inverters and 10 ohm or less for 460 V class inverters.
- Take protective measures against ESD (Electrostatic Discharge) before touching the pcb boards during inspection, installation or repair.
- The inverter is designed for use under the following environmental conditions:

|  | Ambient temp. | $-10 \sim 50{ }^{\circ} \mathrm{C}\left(14^{\circ} \mathrm{F} \sim 122^{\circ} \mathrm{F}\right)$ <br> Decrease $2 \%$ of rated current for every $1^{\circ} \mathrm{C}$ increase in above $40^{\circ} \mathrm{C}$. |
| :---: | :---: | :---: |
|  | Relative humidity | 90\% Relative Humidity or less (non-condensing) |
|  | Storage temp. | $-20 \sim 65{ }^{\circ} \mathrm{C}\left(-4^{\circ} \mathrm{F} \sim 149^{\circ} \mathrm{F}\right)$ |
|  | Location | Protected from corrosive gas, combustible gas, oil mist or dust (Pollution Degree 2 Environment) |
|  | Altitude, Vibration | Max. 1,000m (3,300ft) above sea level, Max. $5.9 \mathrm{~m} / \mathrm{sec}^{2}(0.6 \mathrm{G})$ or less |
|  | Atmospheric pressure | $70 \sim 106 \mathrm{kPa}$ (20.67 in $\mathrm{Hg} \sim 31.3$ in Hg ) |

(2) Wiring

- Do not connect power factor correction capacitors, surge suppressors, or RFI filter to the output of the inverter
- The connection orientation of the motor output cables $\mathrm{U}, \mathrm{V}, \mathrm{W}$ will affect the direction of rotation of the motor. Verify correct wiring before starting inverter.
- Incorrect terminal wiring could result in inverter and/or equipment damage.
- Reversing the polarity (+/-) of the terminals could damage the inverter.
- Only authorized personnel familiar with LS inverter should perform wiring and inspections.
- Always install the inverter before wiring. Otherwise, electric shock or bodily injury can occur.
(3) Trial run
- Check all parameters during operation. Parameter values might require adjustment depending on the application.
- Always apply voltage within the permissible range of each terminal as indicated in this
manual. Otherwise, inverter damage may result.
(4) Operation precautions
- When the Auto restart function is selected, the inverter will restart after a fault has occurred.
- The Stop key on the keypad can only be used to stop the inverter when keypad control is enabled. Install a separate emergency stop switch if necessary.
- If a fault reset is made with the run command and /or reference signal present, a sudden start will occur. Check that the run command and /or reference signal is turned off in advance of resetting any faults. Otherwise an accident could occur.
- Do not modify the inverter.
- Depending on the motor specifications and user ETH overload settings, the motor may not be protected by electronic thermal function of inverter.
- The operation of the inverter is intended to be controlled by either keypad command or control input signals. Do not use a magnetic contactor or any other device that routinely disconnects the inverter and reconnects the inverter to the input supply power for the purpose of starting and stopping the motor.
- A noise filter may be installed to reduce the effect of electromagnetic interference. Otherwise nearby electronic equipment may be affected.
- In cases with input voltage unbalances, install an AC input reactor.
- Power Factor capacitors and generators may become overheated and damaged due to harmonics created by the inverter.
- Use an insulation-rectified motor or take measures to suppress the micro surge voltage when driving 460 V class motor with inverter. A micro surge voltage attributable to wiring constant is generated at motor terminals, and may deteriorate insulation and damage motor.
- Before operating unit and prior to user programming, reset user parameters to default settings.
- The Inverter can be set to operate a motor at high-speeds. Verify the speed capability of motor and machinery prior to operating inverter.
- Holding torque is not produced when using the DC-Brake function. Install separate equipment when holding torque is required.
(5) Fault prevention precautions
- If required, provide a safety backup such as an emergency mechanical brake to prevent any hazardous conditions if the inverter fails during operation.
(6) Maintenance, inspection and parts replacement
- Do not megger (hi-pot or insulation resistance) test the power or control circuit of the inverter.
- Refer to Chapter 8 for periodic inspection and parts replacement details.
(7) Disposal
- Handle the inverter as an industrial waste when disposing of it.
(8) General instructions

Many of the diagrams and drawings in this instruction manual show the inverter without a cover. Prior to operating the unit, be sure to restore covers and circuit protection according to specifications.

## CHAPTER 1 - BASIC INFORMATION

Read and understand this manual before installing, operating or servicing this inverter. The inverter must be installed according to this manual. The following conventions are used to indicate safety messages in this manual Failure to heed these messages could result in serious or possibly even fatal injury or damage to the products or to related equipment and systems.

### 1.1 Inspection

- Remove the inverter from its packing and inspect its exterior for shipping damage. If damage is apparent notify the shipping agent and your LSIS sales representative.
- Remove the cover and inspect the inverter for any apparent damage or foreign objects. Ensure that all mounting hardware and terminal connection hardware is properly seated, securely fastened, and undamaged.
- Check the nameplate on the iP5A inverter. Verify that the inverter unit is the correct horsepower and input voltage for the application.

### 1.1.1 Inverter model number

The numbering system of the inverter is as shown below.

* UL Open type : UL Open type product must be mounted on the panel in a house
* UL Enclosed type 1 : UL Enclosed type 1 product can be mounted without the panel in a house

### 1.1.2 Installation

To operate the inverter reliably, install the inverter in a proper place with the correct direction and with the proper clearances.

### 1.1.3 Wiring

Connect the power supply, motor and operation signals (control signals) to the terminal block. Note that incorrect connection may damage the inverter and peripheral devices.

### 1.2 Basic configuration

The following devices are required to operate the inverter. Proper peripheral devices must be selected and correct connections made to ensure proper operation. An incorrectly applied or installed inverter can result in system malfunction or reduction in product life as well as component damage. You must read and understand this manual thoroughly before proceeding.
Use a power source with a voltage within the
permissible range of inverter input power
rating.

CHAPTER 2 - SPECIFICATION

Chapter 2 - Specification

### 2.7 Common Specifications

$\left.\left.\begin{array}{||l|l||}\hline \text { Cooling method } & \text { Forced air cooling (Self-cooling for below 1.5kW-2, 2.2kW-4) } \\ \hline \text { Short Circuit Rating } & \begin{array}{l}\text { 65kA, suitable for use on a circuit capable of delivering not more than 100,000 } \\ \text { RMS Symmetrical amperes, 240 (or 480V) volts maximum }\end{array} \\ \hline \text { Agency Approvals } & \text { UL and cUL listed, CE marked } \\ \hline & \text { Control Method } \\ \hline \begin{array}{l}\text { Frequency } \\ \text { Resolting }\end{array} & \text { V/F, Sensorless Vector, Slip Compensation, Easy Start Selectable }\end{array} \right\rvert\, \begin{array}{ll||}\text { Digital Reference: 0.01 Hz (Below 100 Hz), 0.1 Hz (Over 100 Hz) } \\ \text { Analog Reference: 0.01 Hz / 60 Hz }\end{array}\right]$

| $\begin{aligned} & \underset{y}{2} \\ & \underset{2}{2} \\ & \underset{0}{2} \end{aligned}$ | $\begin{aligned} & \stackrel{\rightharpoonup}{\tilde{0}} \\ & \stackrel{\rightharpoonup}{0} \\ & \hline \end{aligned}$ | Operation <br> Information | Output Frequency, Output Current, Output Voltage, Frequency Set Value, Operating Speed, DC Voltage, Integrating Wattmeter, Fan ON time, Run-time, Last Trip Time |
| :---: | :---: | :---: | :---: |
|  |  | Trip <br> Information | Trips Indication when the Protection Function activates. Max. 5 Faults are saved. Last Trip Time. |
|  | Ambient Temperature |  | $-10 \sim 50{ }^{\circ} \mathrm{C}\left(14^{\circ} \mathrm{F} \sim 122^{\circ} \mathrm{F}\right)$ <br> Decrease $2 \%$ of rated current for every $1^{\circ} \mathrm{C}$ increase in above $40^{\circ} \mathrm{C}$. |
|  | Storage Temperature |  | $-20^{\circ} \mathrm{C} \sim 65^{\circ} \mathrm{C}\left(14^{\circ} \mathrm{F} \sim 149^{\circ} \mathrm{F}\right)$ |
|  | Ambient Humidity |  | Less Than 90 \% RH Max. (Non-Condensing) |
|  | Altitude - Vibration |  | Below $1,000 \mathrm{~m}\left(3,300 \mathrm{ft}\right.$ ), Below $5.9 \mathrm{~m} / \mathrm{sec}^{2}(0.6 \mathrm{~g})$ |
|  | Application Site |  | Pollution degree 2, No Corrosive Gas, Combustible Gas, Oil Mist, or Dust |

(1) Rated capacity ( $\sqrt{3} \times \mathrm{V} \times \mathrm{I}$ ) is based on 220 V for 200 V class and 460 V for 400 V class.
(2) Indicates the maximum applicable capacity when using a 4-Pole standard motor.
(3) IP20 or UL Enclosed Type1 can be provided by the option.
(4) IP20 or UL Enclosed Type1 is not provided.
(5) Overload rating $120 \%, 1 \mathrm{~min}$ is based on ambient $25^{\circ} \mathrm{C}$.

### 2.8 Dimensions

1) SV008~055iP5A (200/400V Class) and SV0055~0110iP5A(600V Class)

mm (inches)

|  | Wm (inches) |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## CHAPTER 3 - INSTALLATION

### 3.1 Installation precautions

1) Handle the inverter with care to prevent damage to the plastic components. Do not hold the inverter by the front cover.
2) Do not mount the inverter in a location where excessive vibration ( $5.9 \mathrm{~m} / \mathrm{sec}^{2}$ or less) is present such as installing the inverter on a press or other moving equipment.
3) Install in a location where temperature is within the permissible range $\left(-10 \sim 40^{\circ} \mathrm{C}\right)$.

4) The inverter will be very hot during operation. Install it on a non-combustible surface.
5) Mount the inverter on a flat, vertical and level surface. Inverter orientation must be vertical (top up) for proper heat dissipation. Also leave sufficient clearances around the inverter. However, $\mathrm{A}=\mathrm{Over} 500 \mathrm{~mm}$ and $\mathrm{B}=$ 200 mm should be obtained for inverters rated 30 kW and above.

6) Do not mount the inverter in direct sunlight or near other heat sources.
7) The inverter shall be mounted in a Pollution Degree 2 environment. If the inverter is going to be installed in an environment with a high probability of dust, metallic particles, mists, corrosive gases, or other contaminates, the inerter must be located inside the appropriate electrical enclosure of the proper NEMA or IP rating.
8) When two or more inverters are installed or a ventilation fan is mounted in inverter panel, the inverters and ventilation fan must be installed in proper positions with extreme care taken to keep the ambient temperature of the inverters below the permissible value. If they are installed in improper positions, the ambient temperature of the inverters will rise.

9) Install the inverter using screws or bolts to insure the inverter is firmly fastened.

### 3.2 Wiring

### 3.2.1 Basic wiring

1) For $0.75 \sim 30 \mathrm{~kW}$ (1~40HP)
Main Power Circuit

Note :1) 5 G is Common Ground for Analog Input/Output. (Only applied to $0.75 \sim 30 \mathrm{~kW}$ products)
2) Use terminal V1 for V1, V1S (0~12V, -12 ~ 12V) input.
3) To add DC reactor, Remove DC Bus Choke and connect to P1(+), P2(+).
4) SA,SB terminal is provided with 600 V class model only.
2) For $37 \sim 90 \mathrm{~kW}(50 \sim 125 \mathrm{HP}) / 315 \sim 450(400 \sim 600 \mathrm{HP})$

Note : 1) 5 G is Common Ground for Analog Meter Output(SO,S1) and External motor thermal detection(ET).
CM is Common Ground for Analog input.
2) Use terminal V1 for V1, V1S ( $0 \sim 12 \mathrm{~V},-12 \sim 12 \mathrm{~V}$ ) input.
3) To add DC reactor, remove DC Bus Choke and connect to P1(+), P2 (+),
4) SA,SB terminal is provided with 600 V class model only
3) For $110 \sim 280 \mathrm{~kW}$ (150~350HP)

Note : 1) 5 G is Common Ground for Analog Meter Output(SO,S1) and External motor thermal detection(ET). CM is Comon Ground for Analog Input
2) Use terminal V 1 for $\mathrm{V} 1, \mathrm{~V} 1 \mathrm{~S}(0 \sim 12 \mathrm{~V},-12 \sim 12 \mathrm{~V})$ input.
3) DC Reactor is built basically in the inverters for $110 \sim 280 \mathrm{~kW}(150 \sim 350 \mathrm{HP}$ ).
4) $\mathrm{SA}, \mathrm{SB}$ terminal is provided with 600 V class model only.
4) For $15 \sim 30 \mathrm{~kW}$ (20~40HP) Built-in DCL Type

5) For $37 \sim 90 \mathrm{~kW}$ (50~125HP) Built-in DCL Type

Note : P1(+) is not provided for wiring.
6) Power Terminals:
(1) $0.75 \sim 30 \mathrm{~kW}(200 \mathrm{~V} / 400 \mathrm{~V} / 600 \mathrm{~V}$ Class)

(2) $37 \sim 90 \mathrm{~kW}(50 \sim 125 \mathrm{HP}) / 315 \sim 450 \mathrm{~kW}(400 \sim 600 \mathrm{HP})<400 \mathrm{~V} / 600 \mathrm{~V}$ Class>

Jumper
(3) $15 \sim 18.5 \mathrm{~kW}(20 \sim 25 \mathrm{HP})$ <Built-in DC Reactor Type, 400V Class>

| $\mathrm{G} \oplus$ | R(L1) | S(L2) | T(L3) | $\mathrm{P}(+)$ | $\mathrm{N}(-)$ | U | $\checkmark$ | W | $\mathrm{G}(\underset{)}{ }$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

(4) 22~30kW (30~40HP) <Built-in DC Reactor Type, 400V Class>

| $\mathrm{R}(\mathrm{L} 1)$ | $\mathrm{S}(\mathrm{L} 2)$ | $\mathrm{T}(\mathrm{L} 3)$ | $\mathrm{P}(+)$ | $\mathrm{N}(-)$ | U | V | W |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(5) $37 \sim 90 \mathrm{~kW}(50 \sim 125 \mathrm{HP}) / 110 \sim 280 \mathrm{~kW}(150 \sim 350 \mathrm{HP})<$ Built-in DC Reactor Type, 400V Class>

| R(L1) | S(L2) | T(L3) | P2(+) | $\mathrm{N}(-)$ | U | V | W |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Symbol | Description |
| :--- | :--- |
| $\mathrm{R}(\mathrm{L} 1), \mathrm{S}(\mathrm{L} 2), \mathrm{T}(\mathrm{L} 3)$ | AC Line Voltage Input |
| G | Earth Ground |
| $\mathrm{P} 1(+), \mathrm{P} 2(+)$ | External DC Reactor (P1(+)-P2(+)) Connection Terminals <br> (Jumper must be removed). |
| $\mathrm{P} 2(+), \mathrm{N}(-)$ or <br> $\mathrm{P}(+), \mathrm{N}(-)$ | DB Unit (P2(+)-N(-)) Connection Terminals |
| $\mathrm{U}, \mathrm{V}, \mathrm{W}$ | 3 Phase Power Output Terminals to Motor |

7) Control circuit terminal
$0.75 \sim 30 \mathrm{~kW} / \mathbf{1} \sim 40 \mathrm{HP}(200 \mathrm{~V} / 400 \mathrm{~V}$ Class)

$37 \sim 450 \mathrm{~kW} / 50 \sim 600 \mathrm{HP}$ (400V Class)

Note) The terminal specification is subject to change according to decision of manufacturer.

| Type |  | Symbol | Name | Description |
| :---: | :---: | :---: | :---: | :---: |
|  | Starting <br> Contact <br> Function <br> Select | M1, M2, M3 | Programmable <br> Digital Input 1, 2, 3 | Defines Programmable Digital Inputs. <br> (Factory setting: Multi-Step Frequency 1, 2, 3) |
|  |  | FX [M7] | Forward Run <br> Command | Forward Run When Closed and Stopped When Open. |
|  |  | RX [M8] | Reverse Run Command | Reverse Run When Closed and Stopped When Open. |
|  |  | JOG [M6] | Jog Frequency <br> Reference | Runs at Jog Frequency when the Jog Signal is ON. The Direction is set by the FX (or RX) Signal. |
|  |  | BX [M5] | Emergency Stop | When the BX Signal is ON the Output of the Inverter is Turned Off. When Motor uses an Electrical Brake to Stop, BX is used to Turn Off the Output Signal. Take caution when BX Signal is OFF (Not Turned Off by Latching) and FX Signal (or RX Signal) is ON. If so, motor continues to Run. |
|  |  | RST [M4] | Fault Reset | Used for Fault Reset. |
|  |  | CM | Sequence Common (NPN) | Common terminal for NPN contact. |
|  |  | 24 | Sequence Common (PNP) | Common 24 V terminal for PNP contact input. (maximum output : $+24 \mathrm{~V}, 100 \mathrm{~mA}$ ) |
|  | Analog frequency setting | V+, V- | Analog Power Source (+12V,-12V) | Power supply for Analog Frequency Setting. Maximum Output: $+12 \mathrm{~V}, 100 \mathrm{~mA},-12 \mathrm{~V}, 100 \mathrm{~mA}$. |
|  |  | V1 | Frequency Reference (Voltage) | Used by a DC $0-12 \mathrm{~V}$ or $-12 \sim 12 \mathrm{~V}$ input to set the frequency reference. (Input impedance is $20 \mathrm{k} \Omega$ ) |
|  |  | I | Frequency Reference (Current) | Used by a $0-20 \mathrm{~mA}$ input to set the frequency reference. (Input impedance is $249 \Omega$ ) |
|  |  | A0, B0 | Frequency Reference (Pulse) | Used by a pulse input to set the frequency reference. |
|  |  | $\begin{array}{\|l} \hline 5 \mathrm{G}(\sim 30 \mathrm{~kW}) \\ \mathrm{CM}(37 \mathrm{~kW} \sim) \\ \hline \end{array}$ | Frequency Reference Common Terminal | Common Terminal for Analog Frequency Reference Signal. |
|  | External <br> motor <br> thermal <br> detection | $\begin{array}{\|l\|} \hline \text { NT }(\sim 30 \mathrm{~kW}) \\ \text { ET }(37 \mathrm{kw} \sim) \\ \hline \end{array}$ | External motor thermal detection | Motor thermal sensor input. Used to prevent motor from overheating by using a NTC or PTC thermal sensor. |
|  |  | 5G | Common for NT(or ET) | Common Terminal for External motor thermal detection. |
| Built-in RS485 terminal termina |  | $\mathrm{C}+$, $\mathrm{C}-$ | RS485 signal High, Low | RS485 signal |
|  |  | CM | RS485 common | Common Ground. Terminal for RS485 interface. |
|  | Analog <br> Output | S0, S1 | Programmable <br> Voltage Output | Voltage output for one of the following: Output Frequency, Output Current, Output Voltage, DC Link Voltage. Default is set to Output Frequency. (Maximum Output Voltage and Output Current are $0-12 \mathrm{~V}$ and 1 mA ). |
|  |  | 5G | Analog Common Terminal | Common Terminal for Analog Output (S0, S1). |
|  | Contact | 3A, 3C, 3B | Fault Contact Output | Energizes when a fault is present. (AC250V, 1A; DC30V, 1A) <br> Fault: 3A-3C Closed (3B-3C Open) <br> Normal: 3B-3C Closed (3A-3C Open) |
|  |  | $\begin{aligned} & \mathrm{A} 1 \sim 4, \\ & \mathrm{C} 1 \sim 4 \end{aligned}$ | Programmable Digital Output | Defined by Programmable Digital Output terminal settings (AC250V, 1A or less; DC30V, 1A or less) |

Note) M1~M8 terminals are User Programmable. NC terminal is unavailable.

### 3.2.2 Wiring power terminals

## - Wiring Precautions

1) The internal circuits of the inverter will be damaged if the incoming power is connected and applied to output terminals (U, V, W).
2) Use ring terminals with insulated caps when wiring the input power and motor wiring.
3) Do not leave wire fragments inside the inverter. Wire fragments can cause faults, breakdowns, and malfunctions.
4) For input and output, use wires with sufficient size to ensure voltage drop of less than $2 \%$.
5) Motor torque may drop of operating at low frequencies and a long wire run between inverter and motor.
6) The cable length between inverter and motor should be less than 150 m ( 492 ft ). Due to increased leakage capacitance between cables, overcurrent protective feature may operate or equipment connected to the output side may malfunction. (But for products of less than 30 kW , the cable length should be less than 50 m ( 164 ft ) when carrier frequency is more than 10 kHz .)
7) The main circuit of the inverter contains high frequency noise, and can hinder communication equipment near the inverter. To reduce noise, install line noise filters on the input side of the inverter. 8) Do not use power factor capacitor, surge killers, or RFI filters on the output side of the inverter. Doing so may damage these componentss.
8) Always check whether the LCD and the charge lamp for the power terminal are OFF before wiring terminals. The charge capacitor may hold high-voltage even after the power is disconnected. Use caution to prevent the possibility of personal injury.
9) Do not connect with MC at output pare of inverter and make MC On/Off during operation. It can cause the Trip or damage of inverter
$\checkmark$ Grounding !
10) The inverter is a high switching device, and leakage current may flow. Ground the inverter to avoid electrical shock. Use caution to prevent the possibility of personal injury. The ground impedance for 200V class is 100 ohm with 400 V class 10 ohm .
11) Connect only to the dedicated ground terminal of the inverter. Do not use the case or the chassis screw for grounding.
12) The protective earth conductor must be the first one in being connected and the last one in being disconnected.
13) As a minimum, grounding wire should meet the specifications listed below. Grounding wire should be as short as possible and should be connected to the ground point as near as possible to the inverter.

| Inverter Capacity |  | Grounding wire Sizes, AWG or kcmil (mm ${ }^{2}$ ) |  |  |
| :---: | :---: | :---: | :---: | :---: |
| $\mathbf{k W}$ | $\mathbf{H P}$ | 200V Class | 400V Class | $\mathbf{6 0 0 V}$ Class |
| $5.5 \sim 7.5$ | $7.5 \sim 10$ | $10(5.5)$ | $12(3.5)$ | $14(2.5)$ |
| $11 \sim 15$ | $15 \sim 20$ | $6(14)$ | $8(8)$ | $12(3.5)$ |
| $18.5 \sim 30$ | $25 \sim 40$ | $4(22)$ | $6(14)$ | $8(8)$ |
| $37 \sim 55$ | $50 \sim 75$ | - | $4(22)$ | $6(14)$ |
| $75 \sim 90$ | $100 \sim 125$ | - | $2(38)$ | $4(22)$ |
| $110 \sim 132$ | $150 \sim 200$ | - | $1 / 0(60)$ | $2(38)$ |
| $160 \sim 280$ | $250 \sim 350$ | - | $4 / 0(100)$ |  |
| $315 \sim 375$ | $400 \sim 600$ | - | $300(150)$ |  |
| 450 | 700 | - | $400(200)$ |  |

3.2.3 Wires and terminal lugs

Refer to below for wires, terminal lugs, and screws used to connect the inverter power input and output.

| Inverter capacity |  | Terminal screw size | Screw torque |  | Wire size |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | R(L1), S(L2), T(L3) |  |  | $\mathbf{U}, \mathrm{V}, \mathrm{W}$ |  |
|  |  | kgf $\cdot \mathrm{cm}$ | lb $\cdot$ in | mm ${ }^{2}$ | AWG or kemil | $\mathbf{m m}^{2}$ | AWG or kemil |

* Apply the rated torque to terminal screws.
* Loose screws can cause of short circuit or malfunction. Tightening the screw too much can damage the terminals and cause a short circuit or malfunction.
* Use copper wires only with $600 \mathrm{~V}, 75^{\circ} \mathrm{C}$ ratings. For $7.5 \sim 11 \mathrm{~kW} 240 \mathrm{~V}$ type inverters, R(L1), S(L2), T(L3) and $\mathrm{U}, \mathrm{V}, \mathrm{W}$ terminals are only for use with insulated ring type connector.

## Power and Motor Connection Example (5.5~30kW inverters)

damages to the inverter.
Arranging the phase sequence is not necessary.

Ground
If

Motor should be connected to the $\mathbf{U}, \mathrm{V}$, and W terminals.
If the forward command (FX) is on, the motor should rotate counter clockwise when viewed from the load side of the motor. If the motor rotates in the reverse, switch the U and V terminals.

### 3.2.4 Control circuit wiring

1) Wiring Precautions

CM and 5G terminals are insulated each other. Do not connect these terminals together or to the power ground.
Use shielded wires or twisted wires for control circuit wiring, and separate these wires from the main power circuits and other high voltage circuits ( 200 V relay sequence circuit).

It is recommended to use the cables of $0.0804 \mathrm{~mm}^{2}(28 \mathrm{AWG}) \sim 1.25 \mathrm{~mm}^{2}$ ( 16 AWG) for TER1, TER2 control terminals and the cables of $0.33 \mathrm{~mm}^{2}(22 \mathrm{AWG}) \sim 2.0 \mathrm{~mm}^{2}(14 \mathrm{AWG})$ for TER3, TER4 control terminals.
2) Control terminal layout

3) Sink mode(NPN mode) / Source mode(PNP mode)

SV-iP5A provides Sink/Source(NPN/PNP) modes for sequence input terminal on the control circuit. The logic of the input terminal is setable to Sink mode(NPN mode) / Source mode(NPN mode) by using the J1 switch. Connection method is shown below.
(1) Sink mode(NPN mode)

- Put J1 switch down to set to Sink mode(NPN mode). CM terminal (24V GND) is common terminal for contact signal input.
- The factory default is Sink mode(NPN mode).
(2) Source mode(PNP mode) - Internal Power Supply used
- Put J1 switch up to set to Source mode(PNP mode). Terminal 24 (24V Power Supply) is common terminal for contact input signal.
(3) Source mode(PNP mode) - External Power Supply used
- Put J1 switch up to set to Source mode(PNP mode).
- To use external 24V Power Supply, make a sequence between external Power Supply (-) terminal and CM(24V GND) terminal.

TER 2

OFF

Use C+ (RS485 signal High), C- (RS485 signal LOW) in TER 2. Turn the J3 switch ON (Upward) to connect the termination resistor ( 120 ohm ). J 3 switch is On the left side of the TER2.

| Item | Specification |
| :--- | :--- |
| Transmission type | Bus method, Multi drop Link System |
| Applicable inverter | SV-iP5A series |
| Number of inverters | Max.31 |
| Transmission distance | Within 1200m Max. (700m desired) |
| Recommendable cable | $0.75 \mathrm{~mm}^{2}$ (18AWG), Shield Type Twisted-pair Wire |
| Installation | C+, C-, CM terminals on the control terminal block |
| Power supply | Insulated from the inverter power supply |

### 3.2.6 Check points on wiring

1) Electrical or mechanical interlock of MC 1 and MC 2 is required for Inverter Bypass Operation. Otherwise, chattering may occur or input power may flow to inverter output, damaging the inverter.
2) Make the sequence to disable the Auto restart after power failure if required. Otherwise, inverter will be automatically restarted.
3) Do not apply the voltage directly to control circuit input terminals such as FX, RX.

## CHAPTER 4 - OPERATION

### 4.1 Programming Keypads

### 4.1.1 LCD Keypad

LCD keypad can display up to 32 alphanumeric characters, and various settings can be checked directly from the display. The following is an illustration of the keypad.

1) Keypad dimension

2) Detail description
(1) LCD Keypad Display

| Displays | Description |
| :--- | :--- |
| 1) Parameter Group | Displays the parameter group. There are DRV, FU1, FU2, I/O, EXT, COM, APP <br> groups. |
| 2) Run/Stop Source | Displays the source of motor Run and Stop <br> K: Run/Stop using FWD, REV buttons on keypad <br> T: Run/Stop using control terminal input FX, RX <br> R: Run/Stop using RS485 <br> O: Run/Stop via option board |
| 3) Frequency Setting | Displays the source of command frequency setting |
| Source | K: Frequency setting using keypad |
|  | V: Frequency setting using V1 (0 ~12V) or V1 + I terminal |
|  | W: Analog frequency reference (V1S: -12 ~ 12V) |
|  | I: Frequency setting using I (4~20mA) terminal |
|  | P: Frequency setting using Pulse input |
| R: Frequency setting using RS485 |  |
|  | U: Up terminal input when Up/Down operation is selected |

| Displays | Description |
| :---: | :---: |
|  | D: Down terminal input when Up/Down operation is selected <br> S: Stop status when Up/Down operation is selected <br> O: Frequency setting via Option board <br> X: Frequency setting via Sub board <br> J: Jog terminal input <br> 1~15: Step frequency operation (except Jog) |
| 4) Output Current | Displays the Output Current during operation. |
| 5) Parameter Code | Displays the code of a group. Use the $\mathbf{\Lambda}(\mathrm{Up}), \boldsymbol{\nabla}$ (Down) key to move through 0~99 codes. |
| 6) Operating Status | Displays the operation information. <br> STP: Stop Status <br> FWD: During Forward operation <br> REV: During Reverse operation <br> DCB: During DC Braking <br> LOP: Loss of Reference from Option Board (DPRAM fault) <br> LOR: Loss of Reference from Option Board (Communication network fault) <br> LOV: Loss of Analog Frequency Reference (V1: 0~12V, -10~12V) <br> LOI: Loss of Analog Frequency Reference (I: 4~20mA) <br> LOS: Loss of Reference from Sub-Board |
| 7) Inverter Output Frequency/ Command Frequency | Displays the Output Frequency during run. Displays the Command Frequency during stop. |

4.1.2 Parameter setting and changing

1) Press [MODE] key until the desired parameter group is displayed.
2) Press [ $\mathbf{\Lambda}$ ] or $[\mathbf{\nabla}]$ keys to move to the desired parameter code. If you know the desired parameter code, you can set the code number of each parameter group in "Jump code", except DRV group.
3) Press [PROG] key to go into the programming mode, the cursor starts blinking.
4) Press [SHIFT/ESC] key to move the cursor to the desired digit
5) Press [ $\mathbf{\Delta}$ ] or [ $\mathbf{\nabla}]$ keys to change the data.
6) Press [ENT] key to enter the data. The cursor stops blinking.

Note: Data cannot be changed when 1) the parameter is not adjustable during the inverter is running (see the function list), or 2) Parameter Lock function FU2-94 [Parameter Lock] is activated.

EX) Changing Accel time from 10 sec to 15 sec

1) LCD keypad

| DRV Acc. time |  |
| :--- | :--- |
| 01 | 10.0 sec |

DRV Acc. time
$01 \quad 1 \square .0 \mathrm{sec}$

DRV Acc. time
$01 \quad \sqrt{5} .0 \mathrm{sec}$
DRV Acc. time
$01 \quad 15.0 \mathrm{sec}$

DRV Acc. time
01 10.0 sec

Move to the desired code to change

Press the [PROG] key.
A Cursor (■) will appear.

Use the [SHIFT] key to move the cursor.

Change the data using [ $\mathbf{\Delta}$ ], [ $\mathbf{\nabla}]$ keys.

Press the [ENT] key to save the value into memory.
The Cursor will disappear.
4.1.3 Parameter groups

The iP5A series inverter has 5 parameter groups separated according to their applications as indicated in the following table.
The iP5A series inverter provides two kinds of keypad. One is 32-character alphanumeric LCD keypad and the other is 7-Segment LED keypad.

| Parameter <br> Group | LCD Keypad | Description |
| :--- | :---: | :--- |
| Drive Group | DRV | Command Frequency, Accel/Decel Time etc. <br> Basic function Parameters |
| Function 1 Group | FU1 | Max. Frequency, Amount of Torque Boost etc. <br> Parameters related to basic functions |
| Function 2 Group | FU2 | Frequency Jumps, Max/Min Frequency Limit etc. <br> Basic Application Parameters |
| Input / Output <br> Group | I/O | Programmable Digital Input/Output Terminal <br> Setting, Auto Operation etc. Parameters needed for <br> Sequence Operation |
| Application <br> Group | APP | PID, MMC (Multi-Motor Control), 2 <br> opd motor <br> operation etc. Parameters related to Application <br> function |

Refer to the function descriptions for detailed description of each group.

1) Parameter Navigation (LCD Keypad)

The parameter group moves directly to DRV group by pressing [SHIFT] key in any parameter code.

Note: This figure shows the group and code navigation through LCD display keypad. It can be different from the actual display due to the group addition or code change.

### 4.2 Operating Example

### 4.2.1 Easy Start Operation

Easy Start Operation is activated by pressing STOP key on the Keypad for 2~3 seconds and inverter begins operation via Keypad (FWD/REV RUN/STOP). Drive mode is preset to V/F and reference frequency to JOG.

### 4.2.2 Operation via Control terminal + Keypad

Setting: DRV-03 [Drive Mode (Run/Stop method)] = Fx/Rx-1
DRV-04 [Frequency Mode (Freq. setting method)] = Keypad
With above setting, Freq setting via terminal \& Run/Stop via Keypad disabled

1) Check the LCD display when Power ON. Otherwise, change the setting correctly as shown above.

| DRV | T/K | 0.0 A |
| :--- | :--- | :--- |
| 00 | STP | 0.00 Hz |

2) Turn the FX (or RX) terminal ON. Then FWD (or REV) LED will be lit.

| DRV T/K | 0.0 A |
| :--- | :--- |
| 00 | FWD |
| 0.00 Hz |  |

3) When setting the Ref. Freq to 60 Hz using PROG/ENT/SHIFT, $\Delta$ keys, the motor will rotate at 60 Hz . FWD (or REV) LED will be flickering during Acceleration/ Deceleration.

4) Turn the FX (or RX) terminal Off. Then Stop LED will be lit.

| DRV | T/K | 0.0 A |
| :--- | ---: | ---: |
| 00 | STP | 60.00 Hz |

Note) To enable Run/Stop via keypad \& Freq setting via control terminal..
Setting: DRV-03 [Drive Mode (Run/Stop method)] = Keypad
DRV-04 [Frequency Mode (Freq. setting method)] = V1, V1S or I

| Operation <br> Example | Freq Setting via Keypad + Run/Stop via Terminal (FX/RX) |  |  |
| :---: | :---: | :---: | :---: |
| [Operation condition] <br> -. Control mode: V/F control <br> -. Ref. Frequency: $50[\mathrm{~Hz}]$ setting via keypad <br> -. Accel/Decel time: Accel - 10 [sec], Decel - 20 [sec] <br> -. Drive mode: Run/Stop via FX/RX terminal, Control terminal: NPN mode |  |  |  |
| [Wiring] |  |  |  |
| Step | Parameter setting | Code | Description |
| 1 | Drive Mode | DRV-3 | Set it to 1 FX/RX-1. |
| 2 | Frequency Mode | DRV-4 | Set it to 0 Keypad-1. |
| 3 | $50[\mathrm{~Hz}]$ freq command setting | DRV-0 | Set freq command $50[\mathrm{~Hz}]$ via Keypad. |
| 4 | Accel/Decel time | DRV-1 <br> DRV-2 | Set Accel time to 10 [sec] in DRV-1. Set Decel time to 20 [sec] in DRV-2. |
| 5 | Terminal FX (M7) | I/O-26 | Motor starts to rotate in Forward direction at 50 Hz with Accel time 10 [sec] when FX terminal is turned ON. <br> Motor decelerates to stop with Decel time 20[sec] when FX terminal is turned OFF. |
| 6 | Terminal RX (M8) | I/O-27 | When RX terminal is turned ON motor starts to rotate in Reverse direction at $50[\mathrm{~Hz}]$ with Accel time 10 [sec]. When it is OFF, motor decelerates to stop with Decel time 20 [sec]. |

4.2.3 Operation via Control Terminal

Setting: DRV-03 [Drive Mode (Run/Stop method)] = $\mathbf{1}(\mathbf{F x} / \mathbf{R x}-\mathbf{1})$
DRV-04 [Frequency Mode (Freq. setting method)] = $\mathbf{2}$ (V1)

1) Check the LCD display when Power ON. Otherwise, change the setting correctly as shown above.

| DRV | T/V | 0.0 A |
| :--- | ---: | ---: |
| 00 | STP | 0.00 Hz |

2) Turn the FX (or RX) terminal ON. Then FWD (or REV) LED will be lit.

| DRVV | T/V | 0.0 A |
| :--- | :--- | :--- |
| 00 | FWD | 0.00 Hz |

3) Set the frequency using V1 (Potentiometer), Output freq ( 60 Hz ). Rotating direction (FWD or REV) and output current (5A) will be displayed on the LCD.
```
DRV T/V 5.0 A
00 FWD 60.00 Hz
```

4) Output freq value is decreasing when turning the potentiometer counterclockwise. Inverter output stops at 0.00 Hz and motor is stopped.

| DRV | T/V | 0.0 A |
| :--- | ---: | ---: |
| 00 | FWD | 0.00 Hz |

5) Turn FX (or RX) terminal OFF

| DRVV | T/V | 0.0 A |
| :--- | ---: | ---: |
| 00 | STP | 0.00 Hz |

| Operation <br> Example (2) | Analog Voltage Input (V1) + Operation via Terminal (FX/RX) |  |  |
| :---: | :---: | :---: | :---: |
| [Operation condition] <br> -. Control mode: V/F control <br> -. Reference Frequency: $50[\mathrm{~Hz}]$ analog input via V1 (Potentiometer) <br> -. Accel/Decel time: Accel - 10 [sec], Decel - 20 [sec] <br> -. Drive mode: Run/Stop via FX/RX terminal, Control terminal: NPN mode |  |  |  |
| [Wiring] |  |  | 1) <br> 2) <br> 3) |
| Step | Parameter setting | Code | Description |
| 1 | Drive Mode | DRV-3 | Set it to $1 \mathrm{Fx} / \mathrm{Rx}-1$. |
| 2 | Frequency Mode | DRV-4 | Set it to 2 V1 Analog input. |
| 3 | $50[\mathrm{~Hz}]$ freq command setting | DRV-0 | Set freq command $50[\mathrm{~Hz}]$ via V1 (potentiometer). |
| 4 | Accel/Decel time | DRV-1 <br> DRV-2 | Set Accel time to 10 [sec] in DRV-1. Set Decel time to 20 [sec] in DRV-2. |
| 5 | Terminal FX (M7) | I/O-26 | Motor starts to rotate in Forward direction at 50 Hz with Accel time 10 [sec] when FX terminal is turned ON. <br> Motor decelerates to stop with Decel time 20[sec] when FX terminal is turned OFF. |
| 6 | Terminal RX (M8) | I/O-27 | When RX terminal is turned ON motor starts to rotate in Reverse direction at $50[\mathrm{~Hz}]$ with Accel time 10 [sec]. When it is OFF, motor decelerates to stop with Decel time 20 [sec]. |

4.2.4 Operation via Keypad

Setting: DRV-03 [Drive Mode (Run/Stop method)] = 0 (Keypad) DRV-04 [Frequency Mode (Freq. setting method)] $=\mathbf{0}(\mathbf{K e y p a d}-1)$

1) Check the LCD display when Power ON. Otherwise, change the setting as shown above.

| DRV | K/K | 0.0 A |
| :--- | ---: | ---: |
| 00 | STP | 0.00 Hz |

2) Set the Ref. Freq to 60 Hz using PROG/ENT/SHIFT, $\triangle$ keys. Set freq is displayed during stop.

| DRV | K/K | 0.0 A |
| :--- | ---: | ---: |
| 00 | STP | 60.00 Hz |

3) When pressing FWD/REV key, motor starts running and output freq and output current are displayed

| DRV | K/K | 5.0 A |
| :--- | ---: | ---: |
| 00 | FWD | 60.00 Hz |

4) Press STOP/RESET key. Then motor decelerates to stop. Set freq 60 Hz is displayed.

| DRV | K/K | 0.0 A |
| :--- | ---: | ---: |
| 00 | STP | 60.00 Hz |

### 4.3 Various function setting \& Description

### 4.3.1 Basic function parameter setting

It is the basic function setting. All settings are factory defaults unless users make change. It is recommended to use factory setting value unless the parameter change is necessary.

## 1) Common parameter setting

The following table shows common parameter setting that should be checked before use regardless of control mode.

| Parameter Name | Code | Description |
| :---: | :---: | :--- |
| Line Freq. | FU1-29 | Sets a freq of the inverter input power source. |
| Base Frequency | FU1-31 | Sets the Motor Base Frequency ${ }^{1}$. |
| Motor Rated Voltage | FU1-50 | Sets the Motor Rated Voltage ${ }^{1)}$. |
| Motor Selection | FU2-40 | Selects motor and voltage rating suitable to the desired <br> inverter. |
| Motor parameters | FU2-41~46 | Basic parameter value setting when selecting the motor <br> rating. <br> Note: If there is any discrepancy between parameter preset <br> value and the actual motor parameter value, change the <br> parameter value according to the actual motor. |
| Drive Mode | DRV-3 | Operation via Keypad, Fx/Rx-1, Fx/Rx-2 and Int 485 <br> setting. |
| Frequency Mode | DRV-4 | Frequency reference source setting parameter |
| Accel/Decel time | DRV-1, <br> Detting | Accel/Decel time setting |

1) If FU1-31 and FU1-50 are set higher than motor nameplate value, it may cause motor overheat and if it is set smaller than that, it may cause Over voltage trip during deceleration. Make sure to enter the actual motor value.

## 2) $V / F$ control

FU2-60 [Control mode] is set to 0 " $\mathrm{V} / \mathrm{F}$ " as factory setting. Operation via V/F control is activated after the above common parameter setting is done and the followings are set.

| Parameter Name | Code | Description |
| :---: | :---: | :--- |
| Starting freq. | FU1-32 | Set frequency to start the motor. |
| Torque boost | FU2-67 | Manual or Auto torque boost settable in this parameter |
| Torque boost value | FU2-68, FU2-69 | If FU1-67 [torque boost] is set to "manual", user sets the <br> desired value and the direction in code FU1-68 and 69. |

## 3) Slip compensation

Operation is done via Slip compensation if FU2-60 is set to 1 \{Slip compen\}. This control keeps motor speed constant regardless of load change.

## 4) Sensorless vector contro

Set FU2-60 to "Sensorless" to enable Sensorless vector control. It is strongly recommended to perform Autotuning before starting Sensorless control in order to maximize performance.

| Parameter Name | Code | Description |
| :---: | :---: | :--- |
| Control method <br> selection | FU2-60 | Select Sensorless. |
| P, I gain for <br> sensorless control | FU2-65, <br> FU2-66 | Set gain for Sensorless. |
| Starting freq | FU1-32 | Starting freq of the motor |

Note) No-load current for Sensorless control is not entered by auto-tuning. Therefore enter the no-load current value in V/F operation. When other than LS standard motor is used, set this value according to the motor in use for better performance.
5) Auto-tuning of motor constant

This parameter enables auto-tuning of the motor constants. If FU2-61 is set to Yes and press the enter key, Rs, Lsigma values begin tuning with the motor stopped. Refer to motor nameplate for the rest of other parameters.

| Parameter Name | Code | Description |
| :---: | :---: | :--- |
| Auto-tuning | FU2-61 | No, Yes |

Note) Motor no-load current and slip freq should be set correctly for safe and better performance. Be sure to check these values and set them properly. Refer to Chapter 5, FU2-40~66 for more.
4.3.2 Advanced function setting

SV-iP5A inverter features advanced function parameters to maximize efficiency and performance of the motor. It is recommended to use the factory setting unless parameter value change is inevitable.

2) Sensorless vector control

Related parameters for starting in Sensorless vector control when FU2-60 [Control Mode Selection] is set to Sensorless.

| Parameter Name | Code | Description |
| :---: | :---: | :--- |
|  | FU2-64 | Pre-excitation time setting |
|  | I/O-20~27 | Programmable Digital Input terminals define |

3) Parameters to monitor motor and inverter status

| Parameter Name | Code | Description |
| :---: | :---: | :--- |
| Output current/ <br> motor speed | DRV-8~9 | Displays output current and motor rpm. |
| DC link voltage | DRV-10 | Displays DC link voltage. |
| User display selection <br> (Voltage and watt) | DRV-11 <br> FU2-81 | Either output voltage or power selected in FU2-81 is <br> displayed in DRV-11. |
| Fault display | DRV-12 | Displays the current inverter fault. |
| TAR / OUT <br> Freq. display | DRV-14 | Displays Target freq. for Accel/Decel \& Output freq <br> during Accel/Decel. |
| REF/FBK display | DRV-15 | Displays PID Reference/ Feedback frequency display. |
| Speed (Hz / Rpm) <br> selection | DRV-16 | Selects inverter output speed unit [Hz or Rpm] |
| PID parameter | DRV-18 | Displays related parameters of PID controller. |
| AD parameter | DRV-19 | Displays inverter analog input value to AD value. |
| EXT - PID parameter | DRV-20 | Displays related parameters of EXT-PID controller. |

Note) DRV-15, DRV-18 only displayed when APP-02 [proc PI mode] is set to "Yes." DRV-20 only displayed when APP-80 [Ext PI mode] is set to "Yes."
5) Parameter initialize

| Parameter Name | Code | Description |
| :---: | :--- | :--- |
| Software version | FU2-82 | Displays the inverter software version. |
|  | FU2-91 | [FU2-91], [FU2-92]: Copying parameters from other |
| Parameter | FU2-92 | inverter |
| Read/Write/Initialize/ | FU2-93 | [FU2-93]: Initializing parameters to factory setting values |
| Lock | FU2-94 | [FU2-94]: Parameter write disabled |
|  | FU2-95 | [FU2-95]: Parameter save |

Note: Motor parameters (FU2-40~46, FU2-62~63) returned to factory setting once Parameter Read/Write is executed.

| 6) Protection \& Trip level setting |  |  |
| :---: | :---: | :---: |
| Parameter Name | Code | Description |
| Electronic thermal | $\begin{aligned} & \text { FU1-60 } \\ & \text { FU1-61 } \\ & \text { FU1-62 } \\ & \text { FU1-63 } \\ & \hline \end{aligned}$ | Protection of the motor from overheating without the use of external thermal relay. Refer to parameter descriptions for more detail. |
| Overload alarm \& trip | FU1-64 <br> FU1-65 <br> FU1-66 <br> FU1-67 <br> FU1-68 | Warning alarm outputs and displays the trip message when overcurrent above the threshold value keeps on. |
| Stall prevention | $\begin{aligned} & \text { FU1-70 } \\ & \text { FU1-71 } \end{aligned}$ | Set the output current level at which the output freq will be adjusted to prevent the motor from stopping due to over-current etc. It activates during accel/ constant speed/decel to prevent the motor stall. |

8) Operation-starting method

| Parameter Name | Code | Description |
| :---: | :--- | :--- |
|  |  | Motor starting method: |
|  | FU2-20 | [FU2-20]: Power-on run, |
| Starting method | FU2-21 | [FU2-21] Restart after Fault Reset, |
|  | FU2-25 | [FU2-25] Number of Auto Restart Attempt |
|  | FU2-26 | [FU2-26] Delay Time Before Auto Restart |
|  | See parameter description for more details. |  |
| Speed Search | FU2-22 | Speed search function is available during Accel, trip, <br> instant power failure, restart after fault reset and Speed <br> Selection |
|  | FU2-23 | FU2-24 |
|  |  |  |
| details. |  |  |

### 4.3.3 Application function setting

## ) PID operation

Inverter can be used to exercise process control, e.g. flow rate, air volume or pressure via PID feedback control.

| Parameter Name | Code | Description |
| :---: | :---: | :--- |
| PID control setting | APP-02 $\sim$ APP-17 | Parameters for PID control setting |

See Chapter 6. PID feedback operation.

## 2) Ext PID operation

It is used for External PID feedback control

| Parameter Name | Code | Description |
| :---: | :---: | :--- |
| ExtPID setting | APP-80 ~ APP-97 | Parameters for Ext PID |

See Chapter 6. External PID operation.

## 3) Pre PID operation

It helps to begin smooth start of the PID control.

| Parameter Name | Code | Description |
| :---: | :---: | :---: |
| PrePID setting | APP-74 ~ APP-76 | Parameters for Pre PID operation |

See Chapter 6. Pre PID operation.

## 4) MMC operation

Inverter controls a whole system by controlling Main motor connected directly to the inverter and Aux motors connected to the inverter relays and operated via relay On/Off.

| Parameter Name | Code | Description |
| :---: | :---: | :---: |
| MMC setting | APP-40 <br> I/O- APP-71 <br> $\sim$ | Parameters for MMC operation |

See Chapter 6. MMC operation.

| 5) Jog and Multi-speed operation |
| :--- |
| Parameter Name Code Description <br> Multi function input <br> terminal setting I/O-20 $\sim 27$ If I/O-20 $\sim 27$ are set to Speed-H, Speed-M, <br> Speed-L, multi- speed operation up to speed 17 is <br> available. <br> Filter time constant <br> for input terminal I/O- 29 Effective for eliminating noise in the freq. Setting <br> circuit <br> Speed reference <br> value DRV-05 $\sim 07$ <br> I/O-31 $\sim$ I/O-42 Speed reference value for each step setting <br> Accel/Decel time <br> setting for each step I/O-50 $\sim 63$ Accel/Decel time for each step setting <br> Jog freq. I/O- 30 Jog freq for jog operation setting |

| Speed-X | Speed-H | Speed-M | Speed-L | JOG | Speed Command | Parameter value |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 0 | 0 | 0 | 0 | Speed 0 | DRV-00 |
| 0 | X | X | X | 1 | Jog freq. | I/O-20 |
| 0 | 0 | 0 | 1 | 0 | Speed -1 | DRV-05 |
| 0 | 0 | 1 | 0 | 0 | Speed -2 | DRV-06 |
| .. | . | . | . | . | . | . |
| . | .. | . | .. | . | . | . |
| 1 | 1 | 0 | 1 | 0 | Speed -13 | I/O-40 |
| 1 | 1 | 1 | 0 | 0 | Speed -14 | I/O-41 |
| 1 | 1 | 1 | 1 | 0 | Speed -15 | I/O-42 |

6) $2^{\text {nd }}$ motor operation
$2^{\text {nd }}$ function setting is required to run the two motors by one inverter by exchange. If the terminal defined for $2^{\text {nd }}$ function signal input is turned $\mathrm{ON}, 2^{\text {nd }}$ motor operation is valid.

| Parameter Name | Code | Description |
| :---: | :---: | :--- |
| Programmable <br> Digital Input <br> terminals setting | I/O-20 $\sim 27$ | $2^{\text {nd }}$ motor operation is available with Programmable <br> Digital Input terminals M1 $\sim$ M8 set to $7\left\{2^{\text {nd }}\right.$ Func $\}$. |
| Parameter setting <br> for 2 $2^{\text {nd }}$ motor <br> operation | APP-20 $\sim$ APP-29 | Setting parameters necessary to operate $2^{\text {nd }}$ motor such <br> as base freq., Accel/Decl time, Stall. |

7) Energy-saving operation

FU1-51 [Energy Save Level] tunes the inverter output voltage to minimize the inverter output voltage during constant speed operation. Appropriate for energy-saving applications such as fan, pump and HVAC.

### 4.4 Operation Example

| Operation <br> Example (2)$\quad 2^{\text {nd }}$ motor operation |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| ```[Operation condition] -. Control mode: V/F control \(-1^{\text {st }}\) motor \(+2^{\text {nd }}\) motor Operation by exchange using [ \(2^{\text {nd }}\) Func] (Set Value different) -. Frequency command: Using Multi-step operation \(1^{\text {st }}\) motor --- \(50[\mathrm{~Hz}]\) as main speed \(2^{\text {nd }}\) motor --- \(20[\mathrm{~Hz}]\) with M1 terminal set as multi- step operation) -. Accel/Decel time: \(1^{\text {st }}\) motor --- Accel time: \(15[\mathrm{sec}]\), Decel time: 25 [sec] \(2^{\text {nd }}\) motor --- Accel time: 30[sec], Decel time: 40 [sec] -. | [Wiring] |  |  |  |  |  |  |
| Step |  | arameter setting | Code | Description |  |  |
| 1 | Cont | ol Mode Selection | FU2-60 | Set it to $0\{\mathrm{~V} / \mathrm{F}\}$. |  |  |
| 2 | Drive | mode | DRV-3 | Set it to Fx/Rx-1. |  |  |
| 3 | Frequ | ncy Mode setting | DRV-4 | Set it to 0 \{keypad-1\}. $1^{\text {st }}$ motor freq setting |  |  |
| 4 | $\begin{array}{\|l} \hline \begin{array}{l} \text { Progr } \\ \text { input } \end{array} \\ \hline \end{array}$ | mmable digital terminal M1 | I/O-20 | Set M1 to 2nd Func. |  |  |
| 5 | $\begin{array}{\|l} \hline \text { Progr } \\ \text { input } \end{array}$ | ammable digital terminal M2 | I/O-21 | Set M2 to Speed-L. $2^{\text {nd }}$ motor freq setting |  |  |
| 6 | Freq | etting for $1^{\text {st }}$ motor | DRV-0 | Set it to $50[\mathrm{~Hz}]$. |  |  |
| 7 | Acce for 1 | /Decel time setting motor | DRV-1, <br> DRV-2 | Set Accel/Decel time to $15[\mathrm{sec}] / 25[\mathrm{sec}]$. |  |  |
| 8 | Freq | setting for $2^{\text {nd }}$ motor | DRV-5 | Set it to $10[\mathrm{~Hz}]$. |  |  |
| 9 | Acce | /Decel time setting motor | $\begin{aligned} & \text { APP-20, } \\ & \text { APP-21 } \end{aligned}$ | Set Accel/Decel time to 30[sec]/50[sec]. |  |  |
| 10 | $1^{\text {st }} \mathrm{m}$ | tor operation |  | Set it as main motor by turning M1, M2, Output relay OFF. Run the motor in FWD/REV direction using FX/RX terminal. |  |  |
| 11 | $2^{\text {nd }} \mathrm{m}$ | tor operation |  | Set $2^{\text {nd }}$ motor parameters by turning terminal M1 ON. Change the freq setting to $20[\mathrm{~Hz}]$ by turning terminal M2 ON . Change to $2^{\text {nd }}$ motor terminal by turning output relay ON. Run the motor in FWD/REV direction by terminal FX/RX. |  |  |

Note: V1S mode enables Forward/Reverse rotation using $\pm 12 \mathrm{~V}$ power via Analog input command. Refer to Chapter 6, Parameter description of DRV-00 for details.

Note: Use V1 instead of V1S mode when FWD/REV Run Prevention is active. V1S mode enables the motor to run both FWD/REV directions.

Note: If the inverter is operated without wiring a motor, trip occurs as below because the protection function is active automatically. In this case, refer to the related parameters(FU1 57 ~ 59). Trip is reset if the inverter is powered down and up once again.

In case that a simple trial run is needed such as a check on basic operation state without a wiring a motor, FU1-57(No Motor Sel) should be set to [No].

## CHAPTER 5 - PARAMETER LIST

5.1 Parameter groups

The parameters of SV-IP5A Series are divided into 5 functions groups in accordance with the application. Their names, principal contents and LCD keypad displays are shown below.

| Name of Group | LCD Keypad Display | Description |
| :---: | :---: | :---: |
| Drive Group <br> [DRV] | DRV T/K 0.0 A <br> 00 STP  0.00 Hz | Target frequency and Accel/ Decel Time, etc. Basic parameters |
| Function1 Group [FU1] | $\begin{aligned} & \text { FU1 } \\ & \text { OO } \end{aligned}$ | Maximum Frequency and Protection, etc Parameters regarding basic functions |
| Function2 Group [FU2] | $\begin{array}{\|lr} \hline \text { FU2 } & \text { Jump code } \\ 00 & 40 \end{array}$ | Frequency Jump and Frequency Limit, etc <br> Parameters regarding application functions |
| Input/Output Group [I/O] | $\begin{array}{ll} 1 / 0 \\ 00 \end{array}$ | Programmable Digital terminal Define and <br> Analog Command, etc <br> Parameters necessary for sequence configuration |
| Application Group <br> [APP] | APP Jump code | PID, MMC, and $2^{\text {nd }}$ motor, etc <br> Parameters regarding application functions |

## Chapter 5 - Parameter List

* $\square$ The gray-highlighted codes are hidden parameters and will appear when the related functions are to be set.
(1) The speed unit is changed from [Hz] to [\%] when DRV-16 is set to [Rpm]. Only User Unit will be displayed when

APP-02 is set to [Yes] and when APP-06 is set to either I, V1 or Pulse and when one of I/O-86~ I/O-88 is set to either [Speed] (Hz or Rpm), [Percent], [Bar], [mBar], [kPa] or [Pa].
Output Frequency (Hz or Rpm; Unit of outupt speed) is displayed in DRV-00 during the Inverter is running. User Unit reference (Unit of PID controller selected) is displayed in DRV-00 during the Inverter is not running.
(2) DRV-15, DRV-18 will appear when APP-02 [Process PI Mode] is set to "Yes". Also User Unit is displayed when one of I/O-86~ I/O-88 is set to either [Speed](Hz or Rpm), [Percent], [Bar], [mBar], [kPa] or [Pa].
(3)DRV-20 will appear when APP-80 [ExtProcess PI Mode] is set to "Yes".
(4) DRV-91/92 will appear only when DRV-22 is set to [2nd Source].

$\square$ The gray-highlighted codes are hidden parameters and will appear when the related functions are to be set. (17) When DRV-04 is set to either V1, V1S, I or V1+I or Pulse, only selected item codes are displayed in I/O-1~I/O19.
(18) I/O-3,5,8,10,14,16 is displayed $0 \sim 100.00$ [**] when App-02 is set to [proc PI mode] or APP-80 is set to [Ext PI mode] and APP-06 PID Feedback Signal Selection is set to one of I, VI, Pulse, after then, one of I/O-86 ~I/O-88 is set to percentage, Bar, $\mathrm{mBar}, \mathrm{kPa}, \mathrm{Pa}$ except for Speed. Unit will be changed to selected unit.
Only user unit displayed when APP-02 or APP-80 is set to [Yes], after APP-06 is set to one of I, V, Pulse, after then one of I/O-86 $\sim \mathrm{I} / \mathrm{O}-88$ is set to either speed, percentage, $\mathrm{Bar}, \mathrm{mBar}, \mathrm{kPa}, \mathrm{Pa}$.
(19) I/O-30 displayed only when one of I/O-20~I/O-27 is set to JOG. DRV-5~DRV-7 and I/O-35 ~ I/O-42 displayed only when I/O-20~I/O-27 is set to Speed_L, Speed_M, Speed_H, Speed_X in combination with step frequency $1 \sim 16$.
(20) I/O-52~I/O-63 displayed only when one of I/O-20~I/O-27 is set to either XCEL_L, XCEL_M, XCEL_H in combination with $1 \sim 7^{\text {th }}$ Accel/Decel time.
(21) I/O-74 ~ I/O-75 displayed only when one of I/O-76 ~ I/O-79 is set to either FDT-1~FDT5
(22) 38400 bps can be set only when the external communication option card is installed.
(23) Only I/O-92 ~ I/O-93 displayed when DRV-03/04 is set to [int485].

CHAPTER 6 - PARAMETER DESCRIPTION
6.1 Drive group [DRV]

DRV-00: Command Frequency/ Output Current

| DRVV Cmd. Freq <br> 00 0.00 Hz | $\mathbf{F}$ | $\mathbf{0 . 0 0}$ |
| :--- | ---: | :--- | :--- | :--- |

Factory Default: $0.00 \mathrm{~Hz} \quad \mathbf{0 . 0 0}$

## 1) Digital frequency setting

When DRV-04 [Frequency Mode] is set to 0 (Keypad-1) or 1 (Keypad-2), command freq is settable less than FU1-30 [Maximum Frequency]

## 2) Monitoring function setting

- Command frequency displayed during stop.
- Output current/frequency displayed during run.

Analog/digital frequency command source setting:
DRV-04 [Frequency Mode]
When DRV-04 [Frequency Mode] is set to V1, V1S, I, V1+I or Pulse, frequency command is set via I/O01~16 [Analog Frequency command]. Refer to I/O$01 \sim 16$ for detail description.

When setting APP-02 [PID operation selection] and/or APP-80 [Ext. PID operation select] to "Yes", I/O-86~88 parameter settings become available. Changing I/O-86~88 value will affect all of the unit display for reference values such as DRV-00 and I/O $01 \sim 16$. See the related parameter description on the manual for more.

When APP-02 [PID operation selection] is set to "Yes" with APP-04 [PID Aux speed selection] to "No," the selection made among
V1,V1S,I,V1+I,Pulse in DRV-04 [Freq mode] becomes PID reference input value and PID target output value becomes inverter reference frequency See the PID description on the manual for more. Set APP-80 [Ext. PID operation selection] to "Yes" and control terminal "I" to " $4 \sim 20 \mathrm{~mA}$ ", Ext. PID feedback value. Set one of the I/O-20~27 to [Ext PID Run]. When the selected terminal for [Ext PID Run] is turned ON, Ext. PID operation begins and Ext. PID output value becomes inverter command frequency. See APP-80~97 for details.

When DRV-16 [Speed Unit Selection] is set to 1 (Rpm), Hz display is changed to Rpm.

| DRV-04 [Frequency Mode] setting guide |  |  |  |
| :---: | :---: | :---: | :---: |
| Set | $\begin{gathered} \hline \text { DRV } \\ -04 \end{gathered}$ | Name | Programming Description |
| 0 | $\begin{gathered} \text { Key } \\ \text { Pad-1 } \end{gathered}$ |  | 1. In DRV-00, press the [PROG] key. <br> 2. Set the desired freq. <br> 3. Press the [ENT] key to write the new value into memory. |
| 1 | $\begin{gathered} \text { Key } \\ \text { Pad-2 } \end{gathered}$ |  | 1. In DRV-00, press the [PROG] key. <br> 2. Press the $[\hat{\imath}(\mathrm{Up})]$ or $[\sqrt{ }$ (Down)] key to set the desired freq. Speed is reflected to the inverter real time upon pressing the UP/DOWN keys. 3. Press the [ENT] key to write the new value into memory. |
| 2 | V1 |  | Voltage analog input ( 0 to 12 V ) to Control terminal "V1". <br> See the description of I/O-01~05. |
| 3 | V1S |  | Voltage analog input (-12 to 12 V , FWD/REV Run) to Control terminal "V1". <br> See the description of I/O-01~05. |
| 4 | I |  | Current analog input (4 to 20 mA ) to Control terminal "I". <br> See the description of I/O-06~10. |
| 5 | V1+I |  | $0-12 \mathrm{~V} / 4-20 \mathrm{~mA}$ Analog input Control terminal "V1","I". <br> See the description of I/O-01~10. |
| 6 | Pulse |  | Set the command frequency ( 0 100 kHz ) from control input terminal "A0 or B0". See the I/O-11~16. |
| 7 | $\begin{aligned} & \text { Int. } \\ & 485 \end{aligned}$ |  | Set the command frequency using RS485 (1200~19200bps) from "C+ or C-" control terminals. See the I/O-90~93. |
| 8 | Ext. PID |  | Set APP-80 [Ext PI Mode] to [Yes]. Apply $4 \sim 20 \mathrm{~mA}$ \{Ext.PID feedback value\} to control terminal "I". Set one of the I/O-20~27 to [Ext PID Run]. <br> When the defined terminal is ON, inverter starts Ext.PID operation and the Ext.PID output value becomes inverter command frequency. See APP-80~97 for more. |

The inverter targets FU1-73 when accelerating or decelerating. When FU1-73 is set to "Maximum Frequency", the acceleration time is the time taken by the motor to reach FU1-30 from 0 Hz . The deceleration time is the time taken by the motor to reach 0 Hz from FU1-30 [Maximum Frequency]. When FU1-73 is set to "Delta Frequency", the acceleration and deceleration time is the time taken to reach a target frequency (instead the maximum frequency) from a specific frequency.
The acceleration and deceleration time can be changed to a preset time via Programmable digital inputs. By setting M1~M8 to 'XCEL-L', 'XCEL-M', 'XCEL-H' respectively, the 1~7 Accel and Decel time set in I/O-50 to I/O-63 are applied by the binary inputs of the M1~M8.

Note: Set the Accel time more than 0.5 sec for smooth acceleration. Setting it too short may deteriorate the starting performance.
In case of the inverters for $110 \sim 450 \mathrm{~kW}(150 \sim 600 \mathrm{HP})$, the factory default of Accel/Decel Time is 60.0/90.0 [sec] respectively

| Code | LCD <br> display | Name | XCEL <br> -H | XCEL <br> -M | XCEL <br> -L | Default |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| DRV-01 | Acc time | Acc time 0 | 0 | 0 | 0 | 20 sec |
| DRV-02 | Dec time | Dec time 0 | 0 | 0 | 0 | 30 sec |
| I/O-50 | ACC-1 | Acc time 1 | 0 | 0 | 1 | 20 sec |
| I/O-51 | DEC-1 | Dec time 1 | 0 | 0 | 1 | 20 sec |
| I/O-52 | ACC-2 | Acc time 2 | 0 | 1 | 0 | 30 sec |
| I/O-53 | DEC-2 | Dec time 2 | 0 | 1 | 0 | 30 sec |
| I/O-54 | ACC-3 | Acc time 3 | 0 | 1 | 1 | 40 sec |
| I/O-55 | DEC-3 | Dec time 3 | 0 | 1 | 1 | 40 sec |
| I/O-56 | ACC-4 | Acc time 4 | 1 | 0 | 0 | 50 sec |
| I/O-57 | DEC-4 | Dec time 4 | 1 | 0 | 0 | 50 sec |

| Code | LCD <br> display | Name | XCEL <br> -H | XCEL <br> -M | XCEL <br> -L | Default |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| I/O-58 | ACC-5 | Acc time 5 | 1 | 0 | 1 | 40 sec |
| I/O-59 | DEC-5 | Dec time 5 | 1 | 0 | 1 | 40 sec |
| I/O-60 | ACC-6 | Acc time 6 | 1 | 1 | 0 | 30 sec |
| I/O-61 | DEC-6 | Dec time 6 | 1 | 1 | 0 | 30 sec |
| I/O-62 | ACC-7 | Acc time 7 | 1 | 1 | 1 | 20 sec |
| I/O-63 | DEC-7 | Dec time 7 | 1 | 1 | 1 | 20 sec |

FU1-73 [Reference Frequency for Accel and Decel]
Set the reference frequency for Accel/Decel time. It can be changed depending on the application.

| Setting Range | Description |
| :---: | :--- |
| Max freq | The Accel/Decel time is the time <br> that takes to reach the maximum <br> frequency from 0 Hz. |
| Delta freq | The Accel/Decel time is the time <br> that takes to reach a target <br> frequency from any frequency. |

FU1-74 [Accel/Decel time scale]
Set the Accel/Decel time unit.

| Setting | Unit | Description |
| :---: | :---: | :--- |
| 0 | 0.01 sec | Minimum 0 sec settable <br> Maximum 60 sec settable |
| 1 | 0.1 sec | Minimum 0 sec settable <br> Maximum 600 sec settable <br> (Factory setting) |
| 2 | 1 sec | Minimum 0 sec settable <br> Maximum 6000 sec settable* |

## DRV-03: Drive Mode (Run/Stop Method)

Select the source of run/stop command.

| Setting Range | Description |
| :---: | :--- |
| Keypad | Run/Stop control by Keypad. |
| FX/Rx-1 | Run/Stop control by Control <br> Terminals command FX, RX. <br> (Method 1) <br> FX: Forward Run/Stop <br> RX: Reverse Run/Stop |
| FX/Rx-2 | Run/Stop control by Control <br> Terminals FX, RX. (Method 2) <br> FX: Run/Stop command |

If the DRV-04 [Frequency Mode] is set to V1, V1S, I,
V1+I, see the description of I/O-01~16 [Analog
Voltage/Current input signal adjustment].

| Setting Range |  | Description |
| :---: | :---: | :--- | :--- |
| Keypad-1 |  | Frequency is set at DRV-00. The <br> frequency is changed by pressing |
| Keypad-2 |  |  |
| PROG key and entered by pressing |  |  |

| Setting Range |  | Description |
| :---: | :---: | :---: |
| Int. 485 |  | Set the freq command using "C+, C-" terminals via RS485 communication. (1200~19200bps) See I/O-90~93. |
| Ext. PID |  | Set APP-80 [Ext PI Mode] to "Yes." Apply Ext. PID feedback value "4~20mA" to control terminal "I". Set one of the I/O-20~27 to [Ext PID Run]. Inverter starts Ext.PID operation when the defined terminal is ON and Ext.PID output value becomes inverter command frequency. See APP-80~97 for details. |

## DRV-05 ~ DRV-07: Step Frequency 1 ~ 3

| $\begin{array}{\|lc} \hline \text { DRV } & \text { Step freq-1 } \\ 05 & 10.00 \mathrm{~Hz} \end{array}$ | 05 | 10.00 |
| :---: | :---: | :---: |
| Factory Default: 10.00 | Hz | 10.00 |
| $\begin{array}{\|lc} \hline \text { DRV } & \text { Step freq-2 } \\ 06 & 20.00 \mathrm{~Hz} \end{array}$ | 06 | 20.00 |
| Factory Default: 20.00 | Hz | 20.00 |
| $\begin{array}{\|cc\|} \hline \text { DRV Step freq-3 } \\ 07 & 30.00 \mathrm{~Hz} \end{array}$ | 07 | 30.00 |
| Factory Default: 30.00 | Hz | 30.00 |

The inverter outputs preset frequencies set in these codes according to the Programmable Digital Input terminals configured as 'Speed-L', 'Speed-M',
'Speed-H' and 'Speed-X'. The output frequencies are decided by the binary combination of M1~M8. See I/O-21~27 for Step Freq 4~7.

| Binary Input Combination |  |  | Output <br> Frequency | Step <br> Speed |
| :---: | :---: | :---: | :---: | :---: |
| Speed-L | Speed-M | Speed-H | Speed 0 |  |
| 0 | 0 | 0 | DRV-00 | Speed |
| 1 | 0 | 0 | DRV-05 | Speed 1 |
| 0 | 1 | 0 | DRV-06 | Speed 2 |
| 1 | 1 | 0 | DRV-07 | Speed 3 |

Note: Speed 0 is the set value in DRV-04.

| DRV-04 data | DRV-00, 0 speed | Freq command <br> source |
| :---: | :---: | :---: |
| KeyPad-1 | Digital command freq | Keypad |
| KeyPad-2 | Digital command freq | Keypad |

| DRV-04 data | DRV-00, 0 speed | Freq command <br> source |
| :---: | :---: | :---: |
| V1 | Analog command <br> freq | Terminal |
| V1S | Analog command <br> freq | Terminal |
| I | Analog command <br> freq | Terminal |
| V1+I | Analog command <br> freq | Terminal |
| Pulse | Pulse command freq | Terminal |
| Int. 485 | Comm. command <br> freq | Terminal |
| Ext. PID | Ext.PID reference <br> frequency | Keypad or <br> Terminal |

## DRV-08: Output Current

| DRV <br> 08 | Current <br> $0.0 ~ A$ | $\mathbf{0 8}$ |
| :--- | :---: | :---: |

This code displays the output current of the inverter in rms unit.

## DRV-09: Motor RPM

| DRV <br> 09 | speed <br> 0rpm | $\mathbf{0 9}$ |
| :--- | :---: | :---: |

This code displays the motor speed in RPM while the motor is running. Use the following equation to scale the mechanical speed using FU2-47 [Gain for Motor Speed display] if you want to change the motor speed display to rotation speed $(\mathrm{r} / \mathrm{min})$ or mechanical speed ( $\mathrm{m} / \mathrm{min}$ ).

Motor speed $=120 *(\mathrm{~F} / \mathrm{P}) *$ Gain for Motor Speed display [FU2-47].
Where, $\mathrm{F}=$ Output Frequency and $\mathrm{P}=$ the Number of Motor Poles

## DRV-10: DC Link Voltage

$\left.\begin{array}{|l|c|}\hline \begin{array}{l}\text { DRV DC } \\ 10\end{array} & 10 \\ \hline & \text { link vtg } \\ ----- & \text { V }\end{array}\right]$

This code displays the DC link voltage inside the inverter.

## DRV-11: User Display Selection

$\left.\begin{array}{|l|c|}\hline \begin{array}{l}\text { DRV User disp } \\ 11\end{array} & \mathbf{0 . 0} \mathrm{~V}\end{array}\right]$

This code displays the parameter selected in FU2-81 [User Display]. One of Voltage (factory default, output voltage display) or Watt (output power display) is selectable.

| DRV-12: Current Trip Display |  |  |  |
| :---: | :---: | :---: | :---: |
| $\begin{array}{ll} \hline \text { DRV Fal } \\ 12 & \text { Fal } \end{array}$ | None | 12 | nOn |
| Factory Default | None |  | nOn |

This code displays the current fault (trip) status of the inverter. Use the PROG, $\Delta$ and $\boldsymbol{\nabla}$ key before pressing the RESET key to check the fault content(s), output frequency, output current, and whether the inverter was accelerating, decelerating, or in constant speed at the time of the fault occurred. Press the ENT key to exit. The fault content will be stored in FU2-01 to FU2-05 when the RESET key is pressed. For more detail, please refer to Chapter 7.
Troubleshooting and Maintenance.

## [Fault Contents]

| Fault (Trip) | LCD Keypad display |
| :--- | :---: |
| Over-Current 1 | Over Current 1 |
| Over-Voltage | Over Voltage |
| External Trip Input | Ext. Trip |
| Emergency Stop <br> (Not Latched) | BX |
| Low-Voltage | Low Voltage |
| Ground Fault | Ground Fault |
| Over-Heat on Heat sink | Over Heat |
| Electronic Thermal Trip | E-Thermal |
| Over-Load Trip | Over Load |
| Inverter H/W Fault <br> - EEP Error, ADC Offset, <br> WDOG Error, In-Phase <br> Open, No Motor Trip | HW-Diag |
| Over-Current 2 | Over Current 2 |
| Output Phase Loss | Out Phase Open |
| Inverter Over-Load | Inv. OLT |

Note: There are WDOG error, EEP error, Input Phase Open, ADC Offset, No Motor Trip for the inverter Hardware Fault. Inverter will not reset when H/W fault occurs. Repair the fault before turning on the power.
Note: Only the highest-level fault will be displayed when multiple faults occur. The rest of faults can be monitored in FU2-01~05 [Fault history]. Cycle the power when the fault is cleared.

Up to 5 faults can be saved in FU2-01~05 [Fault history]. The lowest hierarchy fault such as "Last trip 5 " is the latest. After pressing [PROG] key, press [ $\widehat{\imath}(\mathrm{Up})]$, $[\Omega$ (Down)] key to check the operation information at the time of the fault (Output freq., current, Accel/Decel/Constant Run) and fault type. Press the [ENT] key to escape.
FU2-06 [Erase fault history] clears the faults information. However, FU2-83 [Last Trip Time] is automatically reset when a trip occurs.

| Code | Display | Description |
| :---: | :---: | :---: |
| FU2-01 | Last trip-1 | Fault history 1 |
| FU2-02 | Last trip-2 | Fault history 2 |
| FU2-03 | Last trip-3 | Fault history 3 |
| FU2-04 | Last trip-4 | Fault history 4 |
| FU2-05 | Last trip-5 | Fault history 5 |

FU2-83 [Last Trip Time] shows the total time elapsed after the last trip occurs so it is possible to know the actual trip time by recounting.

DRV-14: Command/Output Frequency Display

| DRVTAR | 0.00 Hz |  |
| :--- | :--- | :--- |
| 14 | OUT | 0.00 Hz |

Factory Default: 0.00 Hz

This code shows the Command (Target) Frequency set in DRV-00 and inverter Output Frequency.

DRV-15: Reference/Feedback Frequency Display

| DRVREF | 0.00 Hz |  |
| :--- | :--- | :--- |
| 15 | FBK | 0.00 Hz |

Factory Default: 0.00 Hz

This code shows the Reference Frequency and Feedback Frequency while PID operation. Appears only when 'Yes' is selected in APP-02.

Inverter PID controller's reference and feedback value are displayed. When APP-02 [PID operation selection] is set to "YES," reference and feedback values are displayed in Hz. When APP-02 [PID operation selection] is set to "YES," and APP-06 [PID feedback selection] is set (one of the I, V1, Pulse) and the desired unit is set in I/O-86 [V1 Unit Sel], I/O-87 [I Unit Sel], I/O-88 [PulseUnitSel] according to the selection in APP-06, PID reference and feedback value will be displayed in user-selected unit.

Ex1) When [mBar] is set

Ex2) When [kPa] is set

## DRV-16: Hz/Rpm Display

Set this parameter to $0[\mathrm{~Hz}]$ to display frequency, or to $1[\mathrm{Rpm}]$ to display speed.

## DRV-18: PID Parameter (To monitor PID controller's Reference/Feedback value and Inverter's Command/output frequency)

Displays PID controller's reference/feedback value and inverter's command/output frequency. When APP-02 [PID operation selection] is set to "YES," reference and feedback values are displayed in Hz . When APP-02 [PID operation selection] is set to "YES," and APP-06 [PID feedback selection] is set (one of the I, V1, Pulse) and the desired unit is set in I/O-86 [V1 Unit Sel], I/O-87 [I Unit Sel], I/O-88
[PulseUnitSel] according to the selection in APP-06, PID reference and feedback value as well as Inverter
command and output frequency will be displayed by percent [\%] unit.

DRV-19: AD Parameter (To monitor the AD conversion value of Analog input)

AD value of the Analog input used for Freq mode, PID or Ext. PID reference/feedback can be monitored in DRV-19.

Ex) When using V1 and I

## DRV-20: EXT-PID Parameter (To monitor ExtPID controller's referencel feedback/ output value)

Displays ExtPID controller's reference/ feedback/ output value.
When APP-80 [External PID operation] is set to
"YES," reference and feedback are displayed in Percent unit.
When APP-02 [PID operation selection] is set to
"YES," and APP-06 [PID feedback signal selection] is set (one of the I, V1, Pulse) and the desired unit is set in I/O-86 [V1 Unit Sel], I/O-87 [I Unit Sel], I/O88 [PulseUnitSel] according to the selection in APP06, PID reference and feedback value will be displayed by percent [\%] unit.

## DRV-22: Local/Remote Key <br> (To use the function of Local/Remote key)

DRV-22 [LocalRemKey] is set to exchanges the LOCAL/REMOTE control.

Definition:
-. Remote : This is set to run reference and frequency reference according to DRV-03, 04. (Terminal, Communication, Multi-speed, etc.)
-. Local : It designates the panel with inverter which is can be controlled by Keypad.

| Code | Display | Description | Default | Range |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{array}{\|l\|} \hline \text { DRV- } \\ 22 \end{array}$ | LocalRe mKey | The method of exchange from Remote to Local controlling | Cntl\&RefStop | 2nd source Cntl\&RefStop <br> Control Stop Ref Only Cntl\&Ref Run Control Run Disable |

<Function definition>
-. 2nd Source : When 'LOC/REM' is inputted, the inverter will be stop according to designated stop method and the inverter will be operated with Run and Frequency reference set in DRV-91, 92.
Caution: In case of the external communication, the manual operation is operated set in DRV-03, 04.
-. Cntl\&RefStop : When 'LOC/REM' is inputted, the inverter will be stop according to designated stop method. Inverter will be operated with Run and Frequency reference from keypad.
-. Control Stop : When 'LOC/REM' is inputted, the inverter will be stop according to designated stop method. Inverter will be operated with Run reference from keypad and Frequency reference set in DRV-04.
-. Ref Only : When 'LOC/REM' is inputted, the inverter willl be operated with set freqeucny from keypad and Run reference set in DRV-03.
-. Cntl\&Ref Run : When 'LOC/REM' is inputted, the inverter will keep the operating status in Remote status and it can be set Run and Frequency reference from keypad.
-. Control Run : When 'LOC/REM' is inputted, the inverter will keep the operating status. It can be set the Run reference from keypad and it can be operated with the Frequency reference set in DRV-04.
-. Disable : Not use the function.

| DRV-22 | Description |

|  | Speed command: DRV-04 Freq mode - <br> keep the current state |

Note: When mode is exchanged from Local to Remote, inverter operates according to Run reference after stop

## DRV-23: Keypad Reference Mode (To select the operation mode after Keypad is removed.)

When keypad is removed from dirve, drive reference changes to what you slelect here or controls stopping or faulting the drive.
Inverter operation is according to the DRV-23
KeyPadMode settings. This function will be operated only when DRV-03, 04 is set to keypad.

| Code | Display | Description | Default | Range |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { DR } \\ & \text { V-23 } \end{aligned}$ | Key Ref Mode | Select the operation mode when keypad is removed (or comm. is disconnected.) | Disable | Minimum <br> Spd <br> Last Spd <br> Preset <br> Spd 1 <br> Stop <br> Fault <br> Disable |

| DRV-23 | Description |
| :--- | :--- |
| Minimum <br> Spd | Operates the inverter with <br> minimum frequency when keypad <br> is removed. |
| Last Spd | Operates the inverter with current <br> frequency when keypad is <br> removed. |
| Preset Spd 1 | Operates the inverter with set <br> frequency in DRV-5 [Stop freq 1]. |
| Stop | Stop the inverter according to FU1- <br> 23 [Stop mode] when keypad is <br> removed. |
| Fault | If keypad is removed, inverter will <br> cuts off its output and displays fault <br> message. |
| Disable | This function disabled. (Factory <br> Default) |

| FU1 <br> 00 | Jump code <br> 1 |
| :--- | :---: |
| Factory Default: 1 | $\mathbf{1}$ |

Jumping directly to any parameter code can be accomplished by entering the desired code number.

This parameter is moved by pressing PROG key and set to 23 with [ $\uparrow(\mathrm{UP})]$, [ $\Omega(\mathrm{DOWN})$ ] key and then entered by pressing ENT key

23 Decel

FU1-01: Run Prevention

| FU1 <br> 01 | Run prev. <br> None |
| :--- | :---: |
|  | $\mathbf{0 1}$ |
| Factory Default: None | $\mathbf{0}$ |

This function prevents reverse operation of the motor. This function may be used for loads that rotate only in one direction such as fans and pumps.

| Setting Range | Description |
| :---: | :--- |
| None | Forward \&Reverse run available. <br> (Factory default) |
| Forward Prev | Forward run prohibited. |
| Reverse Prev | Reverse run prohibited. |

Note: If DRV-04 frequency mode is set to V1S mode,
Forward/Reverse Prevention setting can not be designated.

## FU1-02: Acceleration Pattern FU1-03: Deceleration Pattern

| FU1 Acc. pattern  <br> 02 Linear | $\mathbf{0 2}$ |
| :--- | :---: |

Different combinations of acceleration and deceleration patterns can be selected according to the application.

| Setting Range | Description |
| :---: | :--- |
| Linear | $\begin{array}{l}\text { A general pattern for constant torque } \\ \text { applications. (Factory default) }\end{array}$ |
|  | $\begin{array}{l}\text { This pattern allows the motor to } \\ \text { accelerate and decelerate smoothly. The } \\ \text { actual acceleration and deceleration } \\ \text { time takes longer- about 40\% than the } \\ \text { time set in DRV-01 and DRV-02. } \\ \text { This setting prevents shock during } \\ \text { acceleration and deceleration, and } \\ \text { prevents objects from swinging on } \\ \text { conveyors or other moving equipment. }\end{array}$ |
| * In case Acc/Dec refernence freq. is set |  |
| to max. frequency, |  |
| - Curve ratio is determined by the part |  |
| of Starting and Target curve. |  |
| - S-curve can be made to several ways |  |
| by setting the ratio of starting/ending |  |
| point. |  |
| *-curve In case Acc/Dec reference freq. is set |  |$\}$ U-curve \(\left.\left.\begin{array}{l}to Delta frequency, <br>

- Acc/Dec time that is based on preset <br>
freq. instead of max. freq. will be <br>
applied so perfect S curve is <br>
accomplished.\end{array}\right\} $$
\begin{array}{l}\text { *FU1-04: Start curve for S-curve, } \\
\text { FU1-05: End curve for S-curve } \\
\text { control of acceleration and deceleration } \\
\text { in typical winding machine applications. }\end{array}
$$\right\}\)

Note: Setting value in DRV-01 and DRV-02 is ignored.
Output Frequency

[Accel/Decel Pattern: ‘Linear’]

Actual accel time $=$ Preset accel time + Preset accel time *Starting curve ratio/2 + Preset accel time * Ending curve ratio /2
Actual decel time $=$ Preset decel time + Preset decel time * Starting Curve ratio/2 + Preset decel time * Ending curve ratio/2

Output Frequency

FU1-10~12: Pre-heat (to use Pre-heat function)
$\left.\begin{array}{|l|c|}\hline \begin{array}{l}\text { FU1 Pre-HeatMode } \\ 10\end{array} & \mathbf{1 0} \\ \text { No }\end{array}\right]$

This function enables a motor to prevent moisture from entering and not to develop condensation inside at stop in a humid area by supplying DC current to the motor continuously.

Pre-heat function is activated when FU1-10 [Pre-heat] is set to "Yes", one of the Programmable digital input terminals in I/O-20~27 set to "Pre-heat" and the defined terminal is turned ON. Only active at inverter stop.

- FU1-11 [Pre-heat value] is set in percent of motor rated current.
- FU1-12 [Pre-heat duty] sets the duty for 10 seconds. At $100 \%$ setting, DC current is continuously supplied to the motor.

Caution: Parameter change is disabled during pre-heat function. Remove the reference command at the terminal before programming.
Caution: Reduce FU1-11 [Pre-heat value] or FU1-12 [Pre-heat duty] when inverter or motor is overheated.

## FU1-20: Start Mode <br> FU1-21: Starting DC Magnetizing Time <br> FU1-22: Starting DC Magnetizing Value

Inverter holds the starting frequency for Starting DC Magnetizing Time. It outputs DC voltage to the motor for FU1-21 [Starting DC Magnetizing Time] with the FU1-22 [Starting DC Magnetizing Value] before accelerating.
Select the starting method of the inverter.

|  | FU1-20 <br> set data | Function description |
| :---: | :---: | :--- |
| 0 | Accel | Acceleration to start <br> (Factory default) |
| 1 | Dc-start | Inverter starts acceleration after <br> magnetizing DC current. |
| 2 | Flying- <br> start | Inverter starts RUN while a motor is <br> rotating. |

1) The direction of Motor rotation and the command should be set equal to optimum use of Flying-start function. However, this function is effective with less than $50 \%$ to rated rpm when direction of motor rotation and reference command is opposite.
2) DC-start is disabled when FU1-21 or 22 is set to "0".
3) DC-start is deactivated in Sensorless mode.
4) It is possible to occur No Motor Trip in case that there is output phase loss when DC-start is operated

Inverter starts acceleration after FU1-21 [Starting DC Magnetizing Time] while FU1-22 [Starting DC Magnetizing Voltage] is operated.

## [Operation of Flying Start]

| CODE | Function | Flying <br> Start | Power <br> On <br> Start | RSST <br> Resatrt | IPO <br> Mode | Operation |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| FU1-20 | Speed search on <br> acceleration | Set |  |  |  | Over-current is <br> occurred on Free-Run |
| FU2-20 | Speed search at <br> Power On | Set | Set |  |  | Speed search is <br> activated according to <br> the setting of Flying |

| CODE | Function | Setting Method |  |  |  | Operation |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Flying | Power <br> Start <br> On <br> Start | RST <br> Resatrt | IPO <br> Mode |  |  |
| FU2-21 | Speed search at <br> Trip Reset |  |  | Set |  | Speed start. <br> activated must be Trip <br> Reset. |
| FU2-22 | Speed search at <br> instantaneous <br> interruption |  | Set |  | Set | Power On Start must <br> be set to operate <br> Speed search. |

| Code | LCD Display | Default | Setting |
| :---: | :---: | :---: | :---: |
| FU1-21 | DcSt time | $0[\mathrm{sec}]$ | $0 \sim 60[\mathrm{sec}]$ |
| FU1-22 | DcSt value | $50[\%]$ | $0 \sim 150[\%]$ |

[ DC-start Operation]
FU1-22 [Starting DC Magnetizing Value] is the DC Current amount applied to the motor and is set as percent of FU2-43 [Rated Motor Current].

Note: Do not set FU1-22 [Starting DC Magnetizing Value]
higher than Inverter Rated Current. Otherwise, Motor
Overheating or Overload Trip may occur.

Sets the stopping method for the inverter.

| Setting Range | Description |
| :---: | :--- |
| Decel | Inverter stops by the deceleration <br> pattern. |
| Dc-brake | Inverter stops with DC injection <br> braking. Inverter outputs DC voltage <br> when the frequency reached the DC <br> injection braking frequency during <br> decelerating. |
| Free-run | Inverter cuts off its output <br> immediately when the stop signal is <br> commanded. In case of load to big <br> (Coast to stop) <br> inertia, the motor needs the long <br> time to stop. |
| Flux brake | Fast stop is available by converting <br> the regenerating energy into heat at <br> the motor. |
| Caution: Motor may be overleated due to |  |

Caution: Motor may be overheated due to frequent use of Flux Brake function.

[Stop Mode: 'Decel']

FU1-24: DC Injection Braking Hold Time FU1-25: DC Injection Braking Frequency FU1-26: DC Injection Braking Time FU1-27: DC Injection Braking Value

| $\begin{array}{\|ll} \hline \text { FU1 DcBlk time } \\ 24 & 0.10 \mathrm{sec} \end{array}$ | 24 | 0.10 |
| :---: | :---: | :---: |
| Factory Default: 0.10 sec |  | 0.10 |
| FU1 DcBr freq  <br> 25 5.00 Hz | 25 | 5.00 |
| Factory Default: 5.00 Hz |  | 5.00 |
| $\begin{array}{\|lc} \text { FU1 } & \text { DcBr time } \\ 26 & 1.0 \mathrm{sec} \end{array}$ | 26 | 1.0 |
| Factory Default: 1.0 sec |  | 1.0 |
| $\begin{array}{\|lcc} \hline \text { FU1 } & \text { DcBr value } \\ 27 & 50 \% \end{array}$ | 27 | 50 |
| Factory Default: 50 \% |  | 50 |

By introducing a DC voltage to the motor windings this function stops the motor immediately. Selecting 'DC-Brake' in FU1-23 activates FU1-24 through FU1-27.

When FU1-23 [Stop mode] is set to "DC Brake", inverter decelerates until FU1-25 [DC Injection

Braking Frequency] and begins DC Braking at this frequency.

FU1-24 [DC Injection Braking Hold Time] is the inverter output blocking time before DC injection braking.

FU1-25 [DC Injection Braking Frequency] is the frequency at which the inverter starts to output DC voltage during deceleration.

FU1-26 [DC Injection Braking Time] is the time the DC current is applied to the motor.

FU1-27 [DC Injection Braking Value] is the DC voltage applied to the motor and is based on FU243[Rated Motor Current].

Note: Do not set the FU1-27 higher than Inverter rated current. Otherwise, it may lead to motor overheat or overload trip.
Note: Do not set FU1-25 [DC Braking Frequency] too high than its range (between $0 \sim 5 \mathrm{~Hz}$ ). Otherwise, it may deteriorate its performance.

If the load inertia is large, Set DC brake value to high. If the apposite case, set DC brake value to low. Be careful that this function is used in the high load application like washing machine, dehydrator etc..

FU2-46 [Inertia Rate] function set the Total Inertia of system in comparison with Motor Inertial itself. If the speed is same, Energy $\left(\right.$ Energy $\left.=\mathrm{J} * \omega^{\wedge} 2 / 2\right)$ that save in system is proportional to Inertia $\mathbf{J}$. If J value in same deceleration time is larger, overvoltage will be occurred by regernerative voltage. If the set value is larger, deceleration ratio will become smaller.
This function is used to prevent potential danger from occurring when the whole system is stopped by power outage but the load keeps spinning due to high load inertia.

Inverter will changed the V/F ratio automatically and it can make the continuous operation when instantaneous voltage drop or instantaneous power failure is occurred in condition of Safety Stop selected. (The time differs from the system.) When momentary power failure occurs while Safety Stop is active, inverter stops the motor by deceleration. Deceleration time depends on load inertia energy.

If the load inertia rate is far different between the factory set value and an actual value, set the proper value in FU2-46 [Load Inertia] for optimum use of the Safety Stop function. When the load inertial is large, trip may occur during this function. In this case, increase the FU2-46 [Load Inertia] value little by little to find the proper value. For more stable Safety Stop Function, see FU1-90[Safety Stop Inertia Rate]. [ Caution: This function is effective for high load inertia.

## FU1-29: Line Frequency

| $\begin{aligned} & \text { FU1 } \\ & 29 \end{aligned}$ | Line Freq $60.00 \mathrm{~Hz}$ | 29 | 60.00 |
| :---: | :---: | :---: | :---: |
| Factory | Default: 60.00 |  | 60.00 |

It sets input power frequency. Set 50 or 60 Hz in FU1-
29 [Line Frequency].
Caution: If line frequency is changed, related frequencies such as Max frequency, Base
frequency are automatically changed. To set the related frequencies different to line, user should set the codes manually.

## FU1-30: Maximum Frequency <br> FU1-31: Base Frequency <br> FU1-32: Starting Frequency

| $\begin{array}{\|ll} \hline \text { FU1 } & \text { Max freq } \\ 30 & 60.00 \mathrm{~Hz} \end{array}$ | 30 | 60.00 |
| :---: | :---: | :---: |
| Factory Default: 60.00 | Hz | 60.00 |
| $\begin{array}{\|lr} \hline \text { FU1 } & \text { Base freq } \\ 31 & 60.00 \mathrm{~Hz} \end{array}$ | 31 | 60.00 |
| Factory Default: 60.00 | Hz | 60.00 |
| $\begin{array}{lr}\text { FU1 Start freq } \\ 32 & 0.50 \mathrm{~Hz}\end{array}$ | 32 | 0.50 |
| Factory Default: 0.50 | Hz | 0.50 |

FU1-30 [Maximum Frequency] is the maximum output frequency of the inverter. Make sure this maximum frequency does not exceed the rated rotation speed of the motor.
FU1-31 [Base Frequency] is the frequency where the inverter outputs its rated voltage. Base frequency have to set in the range of maximum frequency. Output of inverter (frequency, voltage) must be set according to the rating of the motor. Rating of standard motor is 60 Hz . If the motor is operated with commercial power, base frequency have to set matching with line frequency.
FU1-32 [Starting Frequency] is the frequency where the inverter starts to output its voltage. If it is set to
5 Hz , motor starts running from 5 Hz .

Caution: Note that these codes setting is automatically changed when FU1-30 and FU1-31 are set before setting FU1-29 [Line Frequency].
Caution: Note that Overheat trip or torque shortage may occur if FU1-31 is set different to motor rated frequency.

Note: Motor starts running at $\mathbf{5 H z}$ when FU2-32 is set to $\mathbf{5 H z}$.

## FU1-33: Frequency Limit Selection FU1-34: Low Limit Frequency FU1-35: High Limit Frequency

| $\begin{array}{\|ll} \hline \text { FU1 Freq limit } \\ 33 & \text { No } \end{array}$ | 33 | 0 |
| :---: | :---: | :---: |
| Factory Default: No |  | 0 |
| $\begin{array}{\|cc\|} \hline \text { FU1 Lim Lo Freq } \\ 34 & 0.50 \mathrm{~Hz} \end{array}$ | 34 | 0.50 |
| Factory Default: 0.50 |  | 0.50 |
| $\begin{array}{\|l} \hline \text { FU1 Lim Hi Freq } \\ 35 \end{array} \quad 60.00 \mathrm{~Hz}$ | 35 | 60.00 |
| Factory Default: 60.00 |  | 60.00 |

FU1-33 selects the limits the inverter operating frequency. If FU1-33 is set to 'Yes', inverter operates within the upper and lower limit setting. The inverter operates at the upper or the lower limit when the
frequency reference is outside the frequency limit range.

Note: if freq set value is below freq low limit, inverter operates at the low limit.

Note: Normal Accel/Decel is performed for the range below low limit during Accel/Decel.

FU1-40: Volts/Hz Pattern

| FU1 V/F pattern <br> 40 <br> Linear | $\mathbf{4 0}$ |
| :--- | :---: |
| Factory Default: Linear | $\mathbf{0}$ |

This is the pattern of voltage/frequency ratio. Select the proper V/F pattern according to the load. The motor torque is dependent on this V/F pattern.
[Linear] pattern is used where constant torque is required. This pattern maintains a linear volts/frequency ratio from zero to base frequency. This pattern is appropriate for constant torque applications. The performance will be improved with the help of FU2-67~69 [Torque boost].
[Square] pattern is used where variable torque is required. This pattern maintains squared volts/hertz ratio. This pattern is appropriate for fans, pumps, etc.
[User V/F] pattern is used for special applications. Users can adjust the volts/frequency ratio according to the application. This is accomplished by setting the voltage and frequency, respectively, at four points between starting frequency and base frequency. The four points of voltage and frequency are set in FU141 through FU1-48.

FU1-41 ~ FU1-48: User V/F Frequency and Voltage

| $\begin{array}{\|ll} \hline \text { FU1 User freq } 1 \\ 41 & 15.00 \mathrm{~Hz} \end{array}$ | 41 | 15.00 |
| :---: | :---: | :---: |
| Factory Default: 15.00 | Hz | 15.00 |
| FU1 Uservolt <br> 25 <br> 25 | 42 | 25 |
| Factory Default: 25 \% |  | 25 |

These functions are available only when 'User V/F' is selected in FU1-40 [V/F pattern]. Users can make the custom V/F pattern by setting four points between FU1-32 [Starting Frequency] and FU1-31 [Base Frequency].

| Description | LCD Display | Setting Range |
| :---: | :---: | :---: |
| No Motor Selection | No Motor Sel | $0($ No $)$ <br> $1(Y e s)$ |
| Trip Current Level | No Motor Level | $5-100[\%]$ |
| Trip Time Setting | No Motor Time | $0.5-10.0[\mathrm{sec}]$ |

Note: When the 'User V/F' is selected, the torque boost of FU1-67 through FU1-69 is ignored.

## FU1-49: AC Input Voltage Adjustment

| FU1 AC InputVolt <br> 49 | $\mathbf{4 9}$ | $\mathbf{8 6 . 4}$ |
| :--- | :---: | :---: |
| Factory Default: $86.4 \%$ |  |  |$\quad$| $\mathbf{8 6 . 4}$ |
| :--- |

It should be set correctly when inverter input voltage and standard input power rating is far different. Otherwise, it will cause inverter damage. This set value affects inverter LV trip (low voltage trip) level. Used only when line fluctuation exceeds its permissible range or input power far different to its standard value is applied.

| Code | LCD Display | Default | Setting |
| :---: | :---: | :---: | :---: |
| FU1-49 | AC Input <br> Volt | $100[\%]$ | $73-115[\%]$ |

Note: As soon as FU1-49 value is set through a button on the keypad, its set value is applied.

## FU1-50: Motor Voltage

| FU1 <br> 50 | Motor Volt <br> 0 | $\mathbf{5 0}$ |
| :--- | :---: | :---: |
| Factory Default: 0 V | $\mathbf{0}$ |  |

Constant voltage output is possible regardless of input voltage fluctuation by setting this parameter.

Caution: When input voltage is less than FU150 [Motor rated voltage], Max output voltage cannot exceed input voltage.

This function is used to reduce the output voltage in applications that do not require high torque and current at its steady speed. The inverter reduces its output voltage after accelerating to the reference frequency (steady speed) if the energy save level is set at $20 \%$. This function may cause over-current trip due to the lack of output torque in a fluctuating load.

When Energy Save is ON, it may take longer during deceleration to stop.

|  | FU1-51 setting | Description |  |  |
| :---: | :---: | :--- | :---: | :---: |
| 0 | None | Disabled (Factory setting) |  |  |
| 1 | Manual | Energy save ON by decreasing <br> the output with the value set in <br> FU1-52. |  |  |
| 2 | Auto | Energy save ON automatically. |  |  |
| Code | LCD | Name | Default | Range |
| FU1-52 | Manual <br> Save | Energy <br> save $\%$ | 0 <br> $[\%]$ | $0 \sim 30$ |
| $[\%]$ |  |  |  |  |$\quad$

## FU1-54: Integrating Wattmeter

- Displays both MWh and kWh in FU1-54.

## Ex) 1500 kWh

```
FU1 KiloWattHour
54 1M 00.0kWh
```

- Max Cumulative value is displayed in FU1-54 as shown below. Ex) $9,999,999.9 \mathrm{kWh}$

FU1 KiloWattHour 54 9999M 999.9kWh

- FU1-54 is not be reset.

Caution: FU1-54 value may differ from the actual value due to the tolerances.

## FU1-55: Inverter temperature

| FU1 <br> 55 | Inv.Temp <br> 44 | $\mathbf{5 5}$ | $\mathbf{4 4}$ |
| :--- | :---: | :---: | :---: |
| Factory Default: 44 $\mathbf{4 4}$ |  |  |  |

IGBT's surface temperature is displayed in FU1-55.

## FU1-56: Motor temperature

Motor temperature detected by external thermal sensor terminal (NT) is displayed in FU1-56.

## FU1-57: No Motor Sel <br> FU1-58: No Motor Level

FU1-59: No Motor Set Time

Factory Default: YES

Factory Default: 5

## FU1 NoMotorTime

$59 \quad 3.0 \mathrm{sec}$
Factory Default: 3.0 sec
These functions can be used to generate Trip in the situation such that there is no actual inverter output but the Main Controller of its hardware does not recognize it. (Damage of SPS for Gate and Damage of Gate, etc.)
When FU1-57 [No Motor Sel] is set to 'Yes', the ouput current less than the value set in FU1-58 [No Motor Level] for a longer perod of time than that set in FU1-59 [No Motor Time], a HW-Diag Trip will occur displaying the message 'No Motor Trip'. (The current level is based on the set Motor rated current.)
Trip occurs when the inverter is operated without wiring a motor.

## FU1-60: Electronic Thermal (Motor ${ }^{2 t}$ ) Selection FU1-61: Electronic Thermal Level for 1 Minute FU1-62: Electronic Thermal Level for Continuous FU1-63: Electronic Thermal Characteristic (Motor type) selection

These functions protect the motor from overheating without using external thermal relay. Inverter calculates the temperature rise in a motor based on several parameters and determines whether or not the motor is overheated from load current. Inverter will disable its output and display a trip message when the electronic thermal feature is activated.

| FU1 ETH select <br> $60 \quad---$ <br> Yes | $\mathbf{6 0}$ | $\mathbf{1}$ |
| :--- | :---: | :---: |
| Factory Default: Yes | $\mathbf{1}$ |  |

This function activates the ETH parameters by setting
'Yes'. ETH level is set as the percentage of FU2-43
[Motor rated current].

| FU1 ETH 1 min  <br> 61 $150 \%$ | 61 | 150 |
| :---: | :---: | :---: |
| Factory Default: 150 \% |  | 150 |

This is the reference current when the inverter determines the motor has overheated. For example, it trips in one minute when $150 \%$ of rated current of motor set in FU2-43 flows for one minute.

Note: The set value is the percentage of FU2-43 [Rated Current of Motor].

| FU1 ETH cont <br> 62 | $\mathbf{6 2}$ |
| :--- | :---: |
| $120 \%$ |  |$|$| $\mathbf{1 2 0}$ |  |
| :--- | :--- |
| Factory Default: $120 \%$ | $\mathbf{1 2 0}$ |

This is the current at which the motor can run continuously. Generally, this value is set to ' $100 \%$, which means the motor rated current set in FU2-43. This value must be set less than FU1-61 [ETH 1min].

Note: The set value is the percentage of FU2-43 [Rated Motor Current].

| FU1 Motor type  <br> 63 Self-cool | $\mathbf{6 3}$ |
| :--- | :--- |
| Factory Default: $\quad$ Self-cool | $\mathbf{0}$ |

To make the ETH function (Motor $\mathrm{i}^{2} \mathrm{t}$ ) work correctly, the motor cooling method must be selected correctly according to the motor.
[Self-cool] is a motor that has a cooling fan connected directly to the shaft of the motor. Cooling effects of a self-cooled motor decrease when a motor is running at low speeds. The Motor is easily heated when operating at low speed, compared to the motor at high speed with the same current. The motor continuous allowable current is derated as the motor speed decreases as shown below figure.
[Forced-cool] is a motor that uses a separate motor to power a cooling fan. As the motor speed changes, the cooling effect does not change. FU1-62 [Electronic thermal level for continuous] set value is utilized regardless of operating frequency.

When operating frequency exceeds 20 Hz :
Continous allowable current[\%] = (0.125 * Operating frequency +92.5 )
When operating frequency not exceeds 20 Hz :
Continous allowable current $[\%]=(1.5 *$ Operating frequency +65 )

Note: Even if the motor current changes frequently due to load fluctuation or acceleration and deceleration, the inverter calculates the $i^{2} t$ and accumulates the value to protect the motor.

## FU1-64: Overload Warning Leve FU1-65: Overload Warning Time

The inverter generates an alarm signal when the output current has reached the FU1-64 [Overload Warning Level] for the FU1-65 [Overload Warning Time]. The alarm signal persists for the FU1-65 even if the current has become the level below the FU1-64. Programmable Digital Output Terminal (AX-CX) is used as the alarm signal output. To output the alarm signal, set I/O-76 [Multifunction Auxiliary Contact Output] to 'OL'. Continues the operation after output the overload alarm signal to Programmable Digital Output Terminal.

Note: FU1-64 is set as the percentage of FU2-43 [Rated Motor Current].

t1: FU1-65 [Overload Warning Time]
[Overload Warning]

FU1-66: Overload Trip Selection
FU1-67: Overload Trip Level
FU1-68: Overload Trip Delay Time

Inverter cuts off its output and displays fault message when the output current persists over the FU1-67
[Overload Trip Level] for the time of FU1-68
[Overload Trip Time]. This function protects the inverter and motor from abnormal load conditions.

Note: The set value is the percentage of FU2-43 [Rated Current of Motor].

## FU1-69: Input/Output Phase Loss Protection

 (Bit Set)| FU1 Trip select <br> 69 | $\mathbf{6 9}$ | $\mathbf{1 0 0}$ |
| :--- | :---: | :---: |
| Factory Default: 100 |  | $\mathbf{1 0 0}$ |

This function is used to cut the inverter output off in case of phase loss in either input power or inverter output.
$1^{\text {st }}$ bit: Output phase loss protection
Enable/Disable
0: Disabled at Output phase loss protection.
1: Enabled at Output phase loss protection
Inverter output is shut down and stopped.
$2^{\text {nd }}$ bit: Input phase loss protection Enable/Disable
0 : Input phase loss protection disabled.
1: Input phase loss protection enabled. Inverter output is shut down and stopped.
$3^{\text {rd }}$ bit: Direct input operation selection Bit 3 cuts off the output when magnetic contactor from second system turns On/Off at direct input operation.
(This function is outputted to operation state at protection state but it is not outputted.)

0 : Direct input operation protection disabled.
1: Direct intput operation automatic protection enabled.

## FU1-70~71: Stall Prevention Level

| FU1 Stall Mode  <br> 70 No | 70 | No |
| :---: | :---: | :---: |
| Factory Default: No | No |  |
| ```FU1 Stall level 71 110 %``` | 71 | 110 |
| Factory Default: 100 \% |  |  |

Set as a percentage of FU2-43 [Rated Current of Motor].
This function is used to prevent the motor from stalling by reducing the inverter output frequency until the motor current decreases below the stall prevention level. This function can be selected for each mode of acceleration, steady speed, and deceleration via bit combination.

Stall level will be automatically reduced if inverter is operated at a frequency higher than the base frequency
Note: If the stall prevention level is above $\mathbf{1 2 0 \%}$ of inverter rated current, the level will be limited at $\mathbf{1 2 0 \%}$ of inveter rated current.
Note: Acceleration time may get longer due to stall prevention during Acceleration.
Note: Inverter starts deceleration when Stop command is applied while motor stall state persists.
Note: Output frequency may oscillates due to stall prevention during constant run.
Note: Deceleration time may get longer due to stall prevention during Deceleration.

## FU1-72: Accel/Decel Change Frequency

| $\begin{aligned} & \text { FU1 Acc/Dec ch F } \\ & 72 \quad 0.00 \mathrm{~Hz} \end{aligned}$ | 72 | 0.00 |
| :---: | :---: | :---: |
| Factory Default: 0.00 |  | 0.00 |

This function is used to change Accel/Decel ramp at a certain frequency. This is useful in textile machine application. For example, when stop command is ON while inverter runs at 100 Hz , inverter swiftly decelerates and changes the ramp at this frequency, leading to soft stop.
Note: If Accel/Decel change frequency is set and 'XCELL', XCEL-M', and XCEL-H' defined in Programmable digital terminals are ON, Multi Accel/Decel operation has the priority.

Accel/Decel Change Operation]

FU1-73: Reference Frequency for Accel/Decel

| FU1 Acc/Dec freq <br> 73 | $\mathbf{7 3}$ | $\mathbf{0}$ |
| :--- | :---: | :---: |
| Max |  |  |$\quad$| Factory Default: Max | $\mathbf{0}$ |
| :--- | :--- |

This is the reference frequency for acceleration and deceleration. If a pre-determined Accel/Decel time from a frequency to a target frequency is required, set this value to 'Delta freq'. It can changeable by application field.

| Setting Range | Description |
| :---: | :--- |
| Max freq <br> (Factory defualt) | The Accel/Decel time is the time <br> that takes to reach the maximum <br> frequency from 0 Hz. |
| Delta freq | The Accel/Decel time is the time <br> that takes to reach a target <br> frequency from any frequency. |

[FU1-73: Max. Freq]

[FU1-73: Delta Freq]

## FU1-74: Accel/Decel Time Scale

| FU1 Time scale 74 0.1 sec | 74 | 1 |
| :---: | :---: | :---: |
| Factory Default: 0.1 sec |  | 1 |

This is used to change the time scale.

| Setting Range | Description |
| :---: | :--- |
| 0.01 sec | The Accel/Decel time is changed by <br> 10 msec. The maximum setting range <br> is 60 seconds. |
| 0.1 sec <br> (Factory default) | The Accel/Decel time is changed by <br> 100 msec . The maximum setting <br> range is 600 seconds. |
| 1 sec | The Accel/Decel time is changed by 1 <br> sec. The maximum setting range is <br> 6000 seconds. |

## FU1-75: Up/Down Frequency Save Selection

This function is used when Multi function Input terminal is set to Up/Down.
The Frequency at releasing point of Multi Function Input Terminal(Up/Down)is saved by FU1-75 and it is displayed in FU1-76.
The Frequency that is saved is reset by Multi Function Input Terminal(Clear).
OutPut Frequency $[\mathrm{Hz}]$

### 6.3 Function 2 Group [FU2]

FU2-00: Jump to desired code \#

| FU2 <br> 00 | Jump code |
| :--- | :---: |
| 1 |  |$|$

Set the code number to which to jump within function group 2. Allows quick access to a desired parameter.

## FU2-01~05: Last trip 1~5 <br> FU2-06: Erase Trips

| FU2 <br> 01 | Last trip-1 <br> None |
| :--- | :---: |
| Factory Default: None | nOn |

| FU2 <br> 05 | Last trip-5 <br> None |
| :--- | :---: |
| Factory Default: $\quad$ None | IOn |

This code displays up to five previous fault (trip) status of the inverter. The lowest numbered fault such as "Last trip 1" is the most recent. Use the PROG,
$\triangle$ and $\boldsymbol{\nabla}$ key before pressing the RESET key to check the fault content(s) such as output frequency, output current, and the operation status whether the inverter was accelerating, decelerating, or in constant speed before the time of the fault occurred. Press the ENT key to escape.
FU2-83 [Last Trip Time] is the time elapsed after last trip occurs. User can count the last trip time from this value.

| FU2 Erase trips <br> 06 | $\mathbf{0 6}$ |
| :--- | :--- |
| Factory Default: No No |  |
| This function erases all fault histories of FU2-01 to |  |
| FU-05 from the memory. |  |
| However, FU2-83 [Last Trip Time] cannot be reset. |  |

## FU2-07: Dwell Time <br> FU2-08: Dwell Frequency

| $\begin{array}{\|ll} \hline \text { FU2 } & \text { Dwell } \text { time } \\ 07 & 0.0 \\ \text { sec } \end{array}$ | 07 | 0.0 |
| :---: | :---: | :---: |
| Factory Default: 0.0 sec |  | 0.0 |
| $\begin{array}{\|lr} \hline \text { FU2 } & \text { Dwell freq } \\ 08 & 5.00 \mathrm{~Hz} \end{array}$ | 08 | 5.00 |
| Factory Default: 5.00 Hz |  | 5.00 |

Accereleration after momentary stop when starts the operation with heavy load.
Note: If the dwell time is set at ' 0 ', this function is not available.
Note: Do not set the Dwell frequency above frequency command. Otherwise, it may lead to operation fault.
Note: this function is disabled in Sensorless control.

Specifies whether or not certain frequencies will be jumped to help prevent undesirable resonance and vibration on the structure of the machine. Three different jump frequency ranges may be set. This avoidance of frequencies does not occur during acceleration or deceleration, only during continuous operation.

When the reference frequency is set between the jump frequency low/high limit, the drive will run at the low limit frequency.
Note: If any 2 ranges are overlapped, the lowest limit will establish the combined low limit Note: Jump freq. is ignored during Accel/Decel.

FU2-20: Power ON Start Selection

| FU2 Power-on run <br> 20 $\mathbf{1}$ $\mathbf{0}$ <br> Nactory Default: No $\mathbf{0}$  |
| :--- | :---: | :---: |

Specifies whether or not the drive will automatically start when power is applied to the drive if a digital input that is programmed as a run command is on at the time power is applied.
If FU2-20 is set to 'No', turn the terminal off and turn on to restart the inverter even though the FX/RX signal is ON.
If FU2-20 is set to 'Yes', the inverter will restart after power is restored. If the motor is rotating by inertia at the time power is restored, the inverter may trip. To avoid this trip, use 'Speed Search' function by setting bit 4 to ' 1 '. If Speed search is not selected, inverter shows normal V/F pattern at acceleration.

## CAUTION

Particular attention must be directed to this function as motor starts to run suddenly upon applying AC input power. Otherwise, it may result in personal damage.

FU2-21: Restart After Fault Reset Selection

| FU2 RST restart | 21 |
| :---: | :---: |
|  |  |

Factory Default: No $\mathbf{0}$

If FU2-21 is set to ' No ', restart the inverter by cycling the FX or RX terminal to CM terminal after the fault has been reset.
If FU2-21 is set to 'Yes', inverter will restart after the RST (reset) terminal has been reset a fault. If the motor is rotating by inertia at the time power is restored, the inverter may trip. To avoid this trip, use 'Speed Search' function by setting bit 2 to 'xx1x'.

[Reset restart: 'No']

## FU2-22: Re-start Selection after Temperary Outage

| FU2 IPF Mode <br> 22 | $\mathbf{2 2}$ | $\mathbf{0}$ |
| :--- | :---: | :---: |
| Factory Default: No | $\mathbf{0}$ |  |

If FU2-22 is set to "Yes", it is used to start automatically the inverter without Trip while the power is restored after interrupt power fault. This function enables the inverter to Flying-start in order to reach target frequency without Trip regardless of FU1-20 Start Mode

Note that RUN command is functioned only when FU2-20 is set to Auto Restart for safety.
If FU2-22 is set to "No", turn the terminal off and turn on to restart the inverter even though the FX/RX signal is ON .

Note: Flying-start is used for Speed Search function.

## FU2-23: Speed Search Type Selection

| FU2 <br> 24 | Search Type <br> 24 |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
| $\mathbf{~ F a c t o r y ~ D e f a u l t : ~ e s t i m a t e d ~ S S ~}$ Estimated SS   <br> Code Display Description DefaultSetting <br> Range |  |  |  |  |
| FU2-23 | Search <br> Type | Speed Search <br> type selection | estmated <br> SS | estmated <br> SS |
| FU2-27 | Flying <br> Perc | Speed Search <br> Current Limit | 70 | $30-160$ |

This function is used to permit automatic restarting after Power ON, Fault Reset and Instant Power Failure without waiting for the motor free run to stop.

## CAUTION

Particular attention must be directed to this function as motor starts to run suddenly after the fault is reset. Otherwise, it may result in personal damage.

FU2-27 [ Flying Perc] limits the output current to set value of Flying Perc in operation of Flying start or Speed Search.
FU2-46[Load Inertia] must be set correctively. If Speed Search function is needed at FU2-20 Power On Start Selection, FU2-21 Restart After Fault Reset Selection and FU2-Retry mode, FU1-20 must be set Flying Start.
Note: estimated SS does not need to set gain setting, real SS need to set the gaint setting of FU228 Ss_Kp and FU2-29 real Ss_Ki according to the case.
Note: Speed search current limit level is set to percentage according to Motor rating current which is set in FU2-43 [ Motor rating current]. It also freerun when meets stop signal on the way of speed search.

Allows a tripped drive to automatically reset itself after a fault thus making provisions for automatic restart. The number of retries is set in parameter FU2-25 and the delay before attempting the fault reset and restart of the drive is programmed in FU226. Should the reset/restart attempts exceed the number programmed in FU2-25, then the drive will latch the fault, display an appropriate fault message and prohibit an automatic restart.
If the auto restart function is used with tripped drive, FU2-24 [Retry Mode] should be set to YES.

If the trip persists after FU2-26, number of trip is increased and Auto restart function is disabled. For example, FU2-25 [Retry number] is 1 with FU2-26 [Retry delay] set to 10 sec , if trip persists over 10 seconds and then is reset (cleared), Auto restart is not performed. Inverter may be tripped out in Motor Free-run status when this function is issued. To avoid it, use the speed search function. Set FU2-21 to 'xx1x'. See FU2-21~FU2-23. If Speed Search function is not selected, drive will be operated with normal V/F pattern.

Note: Disabled when a low voltage (LV) trip, inverter disable (BX) or Arm short occurs.
Note: Inverter decreases the retry number by one as a fault occurs. If trip does not occur after restarting for 30 seconds, the inverter increases the retry number by one and maximum number is limited by the value set in FU2-25.

Particular attention must be directed to this function as motor restarts automatically after the fault is reset. Otherwise, it may result in personal damage.

## FU2-40: Motor Capacity Selection <br> FU2-41: Number of Motor Pole <br> FU2-42: Rated Motor Slip <br> FU2-43: Rated Motor Current <br> FU2-44: No Load Motor Current <br> FU2-45: Motor Efficiency <br> FU2-46: Load Inertia

If users do not set these values, inverter will use factory default values

This parameter sets the motor capacity. FU2-42 [Rated Slip], FU2-43 [Rated Current], FU2-44 [No Load Current], FU2-62 [Stator Resistance], FU2-63 [Rotor Resistance], and FU2-64 [Leakage Inductance] are automatically changed according to motor capacity.
If FU2-44 [No load Curr] is incorrect, run the inverter without the load in V/F mode and check the current at the constant run state and enter this value to FU2-44 [No load Curr]

| FU2 Pole number <br> 41 | $\mathbf{4 1}$ | $\mathbf{4}$ |
| :--- | :---: | :---: |
| Factory Default: 4 | 4 |  |

This is used to display the motor speed. If you set this value to 2 , inverter will display 3600 rpm instead of 1800 rpm at 60 Hz output frequency. (See motor nameplate) When motor pole number is more than 4 , select an inverter one rating higher than that of the motor because motor rated current is large.

Factory Default: $2 \mathrm{~Hz} \quad 2$ (This value is set according to the motor capacity set in FU2-40)

This is used in 'Slip Compensation' control. If you set this value incorrectly, motor may stall during slip compensation control. (See motor nameplate)

| $\begin{array}{\|cc} \hline \text { FU2 } & \text { Rated-Curr } \\ 43 & 19.7 \mathrm{~A} \end{array}$ | 43 | 19.7 |
| :---: | :---: | :---: |
| Factory Default: 19.7 (This value is set according FU2-40) | e mo | $19.1$ <br> ty set |

This is very importance parameter that must be set correctly. This value is referenced in many of other inverter parameters. (See motor nameplate)

| FU2 <br> 44 | Noload-Curr <br> 4.6 A |
| :--- | :---: |

This parameter is only displayed when 'Slip Compen' is selected in FU2-60 [Control Method]
If this value is incorrect, check the current after operating in V/F mode without load connected and enter that current value.

Note: make sure to use correct value for FU2-44 [No-load Current]. Otherwise, Sensorless performance may be degraded.
Note: Preset motor parameters may differ with user motors. In this case, enter the nameplate value of your motor to the corresponding parameters. If motor rating exceeds inverter capacity, unsatisfactory control performance may result because all other control parameters follow inverter capacity.

| FU2 Inertia <br> 46 | $\mathbf{4}$ rate |
| :--- | :---: | :---: |
| 0 |  |$\quad \mathbf{0}$

This parameter is used for sensorless control, Minimum Accel/Decel, Optimum Accel/Decel and Speed search. For better control performance, this value must be set correctly. Install a DB unit or regenerative converter to improve the performance.

Set ' 0 ' for loads that has load inertia less than 10 times that of motor inertia.
Set ' 1 ' for loads that have load inertia about 10 times that of motor inertia.

Motor rated slip freq [Hz]=(Rated input freq. [Hz] (Motor rpm * P/120))
P: Number of motor poles
(Ex) In the case of $\mathbf{6 0 H z}, 4$ pole, 1730 rpm motor Motor rated slip freq $[\mathrm{Hz}]=(60[\mathrm{~Hz}]-(1750[\mathrm{rpm}] * 4 / 120))$ $=60[\mathrm{~Hz}]-58.67[\mathrm{~Hz}]=1.33[\mathrm{~Hz}]$

FU2-47: Gain for Motor Speed Display

| $\begin{array}{cc} \text { FU2 } & \text { RPM factor } \\ 47 & 100 \% \end{array}$ | 47 | 100 |
| :---: | :---: | :---: |
| Factory Default: 100 \% |  | 100 |

This code is used to change the motor speed display to rotating speed $(\mathrm{r} / \mathrm{min})$ or mechanical speed $(\mathrm{m} / \mathrm{min})$. Speed value is displayed at DRV-09. The display is calculated by following equation.

Rotating speed $(\mathrm{r} / \mathrm{min})=120 \times \mathrm{F} / \mathrm{P} \times$ Motor RPM Display Gain
Where, $\mathrm{F}=$ Output frequency, $\mathrm{P}=$ Motor pole number
FU2-48: Carrier Frequency

| $\begin{aligned} & \mathrm{FU} 2 \\ & 48 \end{aligned}$ | $\begin{array}{r} \text { arrier } \\ 5 . \end{array}$ | $\begin{gathered} \text { freq } \\ \text { kHz } \end{gathered}$ | 48 | 5.0 |
| :---: | :---: | :---: | :---: | :---: |
| Factory Default: 5.0 kHz |  |  |  | 5.0 |
| Code | LCD <br> Display | Factory Default |  | Setting Range |
| FU2-48 | Carrier freq | $0.75 \sim 2 \mathrm{~kW}$ | $5[\mathrm{kHz}]$ | $0.7 \sim 15[\mathrm{kHz}]$ |
|  |  | 30 kW |  | $0.7 \sim 10[\mathrm{kHz}]$ |
|  |  | $37 \sim 75 \mathrm{~kW}$ | 4 [kHz] | $0.7 \sim 4[\mathrm{kHz}]$ |
|  |  | 90~280 kW | 3 [ kHz$]$ | $0.7 \sim 3$ [ kHz] |
|  |  | $315 \sim 450 \mathrm{~kW}$ | $2[\mathrm{kHz}]$ | $0.7 \sim 2$ [kHz] |

This parameter affects the audible sound of the motor, noise emission from the inverter, inverter termperature, and leakage current. If the ambient temperature where the inverter is installed is high or other equipment may be affected by potential inverter noise, set this value lower. However, If it set lower than 1 KHz , it can degrade performance.
(It is recommend to use the factory defualt value.) If set above 10 kHz , reduce the rated current by $5 \%$ per 1 kHz . Setting Carrier freqeuncy set below 1.5 [ kHz ] when the FU2-60 [Control mode selection] is set to Sensorless can result in reduced performance.

Caution: FU2-48 [Carrier freq] setting range varies as inverter capacity.

FU2-49: PWM Mode Selection (to reduce noise or leakage current by changing PWM method)

| FU2 <br> 49 | PWM Select <br> Normal | $\mathbf{4 9}$ |
| :--- | :---: | :---: |
| Factory Default: Normal | $\mathbf{0}$ |  |

Noise and leakage current can be reduced without changing carrier freqeuncy by decreasing switching cycle.
When Normal is selected at motor starting, inverter changes switching frequency sequentially from low to set value . "Low Leakage" is used to reduce Leakage current by decreasing switching cycle.

Caution: Reducing the Carrier frequency may increase noise.
Caution: When [Low leakage] is selected while carrier frequency is set lower than 2.0 kHz will be automatically set to 2.0 kHz .

## FU2-52~53: Safety Stop

$\left.\left.\begin{array}{|lr|c|c|}\hline \begin{array}{l}\text { FU2 } \\ 52\end{array} & \text { Dec } & \text { Rate } \\ 100\end{array}\right) ~ \mathbf{5 2}\right)$

Set the deceleration time at FU2-52 [Dec Rate] when Safety function is operating. Input the taking time that the motor free run to stop in operation.
Set the Output Voltage decreasing rate at FU2-53 [Safety Perc] when Safety functin is operating.

| Code | LCD <br> Display | Factory <br> Defualt | Setting <br> Range | Description |
| :--- | :--- | :--- | :--- | :--- |
| FU2-52 | Dec <br> Rate | 100 <br> $[\mathrm{sec}]$ | $1.0 \sim 100.0$ <br> $[\mathrm{sec}]$ | Safety Stop <br> deceleration rate |
| FU2-53 | safety <br> _perc | 21 | $2 \sim 500$ | Safety Stop Ouput <br> decreasing rate |

Selects the control mode of the inverter

| FU2-60 <br> setting | LCD Display | Description |
| :---: | :---: | :---: |
| 0 | V/F | V/F Control |
| 1 | Slip compensation | Slip compensation |
| 2 | Sensorless | Sensorless vector <br> control speed <br> operation |

## V/F control:

This parameter controls the voltage/frequency ratio constant. It is recommended to use the torque boost function when a greater starting torque is required. Related function: FU2-67~69 [Torque boost].

## Slip compensation:

This function is used to maintain constant motor speed. To keep the motor speed constant, the output frequency varies within the limit of slip frequency set in FU2-42 according to the load current. For example, when the motor speed decreases below the reference speed (frequency) due to a heavy load, the inverter increases the output frequency higher than the reference frequency to increase the motor speed. The inverter increases or decreases the output by delta frequency shown below.

Delta freq (Slip Comp. Freq.) = Motor Rated slip * (Output current - Motor No load current) / (Motor rated current - Motor No load current)
Output freq $=$ Reference freq + Delta freq

FU2-40~46 [Motor parameters] is automatically determined by FU2-40 [Motor selection]. Most suitable motor capacity corresponding inverter capacity is set as factory setting, but the following parameters can be adjusted if necessary.

FU2-40~46 [Motor related parameters for Slip Compensation]

| Code | LCD Display | Description |
| :---: | :--- | :--- |
| FU2-40 | Motor select | Select motor capacity |
| FU2-42 | Rated-Slip | Motor rated slip (Hz) |
| FU2-43 | Rated-Curr | Motor rated current <br> (rms) |
| FU2-44 | Noload-Curr | Motor no load current <br> (rms) |
| FU2-45 | Efficiency | Motor efficiency (\%) |
| FU2-46 | Inertia rate | Motor inertia rate |

Note: Incorrectly set FU2-44 [Motor No-load Current] value may weaken the Sensorless control.

## Sensorless (Sensorless vector speed control)

## operation:

Use it when 1) high starting torque is needed at low speed 2) load fluctuation is high 3) rapid response is needed. To use this function, set FU2-40~46 [Motor parameters] and FU2-60 [Control mode selection] properly.
If not using LG 220V/440V Class motor: Set "Yes" in FU2-61 [Auto tuning] first before using this control.

Related parameters: FU2-40~46, FU2-60, FU262~66

| Code | LCD display | Parameter |
| :--- | :--- | :--- |
| FU2-62 | RS | Stator resistance |
| FU2-63 | Lsigma | Leakage inductance |
| FU2-65 | SL P-gain | Sensorless P gain |
| FU2-66 | SL I-gain | Sensorless I gain |

## [Guide for Optimal Use of Sensorless Vector

## Control]

For optimal use of the sensorless control, the following conditions should be met. If one of the following conditions is not satisfied, the inverter may malfunction due to insufficient torque, irregular rotation, or excessive motor noise. In this case, it is recommended to use V/F control.

- Use a motor capacity that is equal to or one horsepower level lower than the inverter capacity.
- Two types of motor parameters can be set for one inverter, but use only one type for sensorless control.
$\square$ Use a LG(HIGEN) $220 \mathrm{~V} / 440 \mathrm{~V}(0.4 \mathrm{~kW} \sim 30 \mathrm{~kW})$ class motor. If other makers' motor or a LG $220 \mathrm{~V} / 380 \mathrm{~V}$ dual rating motor is used, utilize the auto tuning feature in FU2-61 [Auto tuning] before starting.
$\square$ Set appropriate values for the electronic thermal function, the overload limit function and the stall prevention. The set values should exceed $100 \%$ of the rated motor current.
$\square$ When DRV-04 [Frequency Mode] is set to "V1", "V1S", "I", or "V1+I", wiring should be conducted to eliminate potential noise influence with the frequency reference.
$\square$ Pole number of the motor should be 2 pole, 4 pole, or 6 pole.
$\square$ The distance between the inverter and the motor should not exceed 100 m ( 328 ft ).

## [Cautions on Sensorless Vector Control]

$\square$ Forced-cooling should be used for the motor when the average operating speed is under 20 Hz and more than $100 \%$ load is used constantly.
$\square$ Motor may rotate $0.5 \%$ faster than the maximum speed if the motor temperature does not reach normal operating temperature.
$\square$ Utilize the auto-tuning feature when the motor reaches normal temperature (average temperature where the motor normally operates).
$\square$ Output torque may be reduced when an output filter option is used between the inverter and the motor.
■ Overcurrent trip may occur if FU2-62 [Stator resistance] is set twice more than auto-tuned value.

## [Detail Tuning Method for Sensorless Vector

 Control]$\square$ Adjust the FU2-44 [No Load Motor Current (RMS)] value larger or smaller by $5 \%$ units if the current is larger or smaller than that of V/F control under small load.

- Adjust the FU2-42 [Rated Motor Slip] value larger or smaller by $5 \%$ units if the speed is faster or slower than that of V/F control with rated load.

FU2-61~63: Auto tuning

| FU2 Auto tuning <br> 61 | $\mathbf{6 1}$ |
| :--- | :---: |
| NO |  |$\quad$| $\mathbf{0}$ |
| :---: |
| Factory Default: NO |

All of the motor parameters can be tuned by setting "YES (1)". Auto tuning is deactivated when "No (0)" is selected.

| FU2-61 <br> setting | LCD <br> Display | Description |
| :---: | :---: | :---: |
| 0 | No | Do not measure the parameter. |
| 1 | Yes | Measure all parameter. |

| Code | LCD <br> Display | Description | Factory <br> Defualt | Setting <br> Range |
| :--- | :--- | :--- | :--- | :--- |
| FU2-62 | \%Rs | Stator <br> resistance | $4[\%]$ | $0.01-20$ <br> $[\%]$ |
| FU2-63 | \%Lsigma | Leakage <br> Inductance | $12[\%]$ | $0.01-$ <br> $100[\%]$ |

The auto tuning function automatically measures the motor parameters needed for control selected in FU260 [Control mode] such as stator resistance, rotor resistance, leakage inductance, no-load current and Encoder feedback frequency.

The rated current, voltage, efficiency and slip described in the motor nameplate should be entered before performing auto tuning. If efficiency is not indicated on the nameplate, use the preset value.

## FU2-64: Pre-excitation Time

When the operation command (FWD, REV) is issued, the inverter conducts pre-exciting automatically for the time specified by this parameter.
After FU2-64 [Pre-excitation Time] elapses the inverter starts normal operation shown in the following graph.

| Code | LCD display | Default | Setting range |
| :---: | :---: | :---: | :---: |
| FU2-64 | PreExTime | $1[\mathrm{sec}]$ | $0 \sim 60[\mathrm{sec}]$ |

FU2-67: Manual/Auto Boost Selection FU2-68: Torque Boost in Forward Direction FU2-69: Torque Boost in Reverse Direction

| FU2 Torque boost 67 Manual | 67 | 0 |
| :---: | :---: | :---: |
| Factory Default: Manual |  | 0 |
| $\begin{array}{lc} \text { FU2 Fwd boost } \\ 68 & 2.0 \% \end{array}$ | 68 | 2.0 |
| Factory Default: 2.0 \% |  | 2.0 |
| FU2 Rev boost  <br> 69 $2.0 \%$ | 69 | 2.0 |
| Factory Default: 2.0 \% |  | 2.0 |

This function is used to increase the starting torque at low speed by increasing the output voltage of the inverter. If the boost value is set too high than required, it may cause the motor flux to saturate, causing over-current trip. Increase the boost value when there is excessive distance between inverter and motor.

## [Manual Torque Boost]

When FU2-67 [Manual/Auto torque boost select] is set to "Manual", FU2-68 [Forward torque boost] and FU2-69 [Reverse torque boost] set values are applied FU2-68 [Forward torque boost] is used for Forward rotation and FU2-69 [Reverse torque boost] is used for Reverse rotation.

| Code | LCD display | Default | Setting range |
| :---: | :---: | :---: | :---: |
| FU2-67 | Torque boost | Manual | Manual/Auto |
| FU2-68 | Fwd boost | $2.0[\%]$ | $0 \sim 15[\%]$ |
| FU2-69 | Rev boost | $2.0[\%]$ | $0 \sim 15[\%]$ |

Note: The torque boost value is to be set as the percentage of inverter rated voltage.
Note: When FU1-40 [Volts/Hz Pattern] is set to 'User V/F', FU2-67~69 [Torque boost] is ignored.
Caution: Do not set the torque boost too high. Otherwise, motor may be over-magnetized.
Caution: Increase this value when torque shortage happens or inverter-motor wiring is distant. If this value is set too high, Overcurrent trip may be triggered.
Caution: It is possible to occur No Motor Trip in case that the torque boost value is 0 when DC Start is operated.
Caution: Output voltage can be limited to restrict the over-current which is occurred by the changes (On/Off) of output relay when output current of inverter is lower than no-load current.

## [Auto Torque Boost]

When FU2-67 [Manual/Auto torque boost select] is set to "Auto", inverter outputs high starting torque by automatic boosting according to the load characteristic.

Caution: Auto torque boost is only applied to the $1^{\text {st }}$ motor. Only Manual torque boost is available for the $2^{\text {nd }}$ motor.
Caution: Auto torque boost is not available when FU2-60 [Control Mode] is set to 'Sensorless'.
Caution: Conduct Auto tuning in FU2-61 [Auto tuning] first to use Auto torque boost effectively.

| :--- | :--- |

When FU2-95 is set to "Yes", the changed parameter value is saved into memory.

### 6.4 Input/Output Group [I/O] <br> I/O-00: Jump to Desired Code \# <br> I/O Jump code <br> 00 <br> $$
1
$$

## Factory Default: 1

Jumping directly to any parameter code can be accomplished by entering the desired code number. This code is available only with LCD keypad.

## //O-01 ~ //O-05: Analog Voltage Input (V1) Signal Adjustment

This is used to adjust the analog voltage input signal when the frequency is referenced by the control terminal ' V 1 '. This function is applied when DRV-04 is set to 'V1', 'V1S', or 'V1+I'. User-selected Unit appears in [**]. To change the unit, more than one in APP-02 [PID operation selection] and APP-80 [Ext. PID operation selection] is set to "Yes" and then select the desired unit Percent, Bar, mBar, kPa , and Pa among in I/O-86 [V1 user unit selection].

| Code | Factory Default | Setting Range |
| :---: | :---: | :--- |
| I/O-01 | $10[\mathrm{msec}]$ | $0 \sim 9999[\mathrm{msec}]$ |
| I/O-02 | $0[\mathrm{~V}]$ | $0 \sim 12[\mathrm{~V}]$ |
| $\mathrm{I} / \mathrm{O}-03$ | $0[\mathrm{~Hz}]$ | $0 \sim$ Max Freq |
|  | $0[* *]$ | $0 \sim 100.00[* *]$ |
| I/O-04 | $10[\mathrm{~V}]$ | $0 \sim 12[\mathrm{~V}]$ |
| $\mathrm{I} / \mathrm{O}-05$ | $60[\mathrm{~Hz}]$ | $0 \sim$ Max Freq |
|  | $0[* *]$ | $0 \sim 100.00[* *]$ |

| I/O V1 <br> 01 | filter <br> 10 ms | $\mathbf{0 1}$ |
| :--- | :---: | :---: |
| Factory Default: 10 ms | $\mathbf{1 0}$ |  |

This is the filtering time constant for V1 signal input among frequency reference input. Increase this value if the V1 signal is affected by noise causing unstable operation of the inverter. Increasing this value makes response time slower.

| $\begin{array}{lll} \hline \text { I/O V1 } & \text { volt } & \text { x1 } \\ 02 & 0.00 ~ V \end{array}$ | 02 | 0.00 |
| :---: | :---: | :---: |
| Factory Default: 0.00 |  | 0.00 |

This is the minimum voltage of the V1 input at which inverter outputs minimum frequency.

This is the inverter output minimum frequency (or target value) when there is the minimum voltage (I/O-02) on the V1 terminal.

This is the maximum voltage of the V1 input at which inverter outputs maximum frequency.

| $\begin{array}{\|lrl} \hline \text { I/O V1 } & \text { freq } y 2 \\ 05 & 60.00 \mathrm{~Hz} \\ \hline \end{array}$ | 05 | 60.00 |
| :---: | :---: | :---: |
| Factory Default: 60.00 |  | 60.00 |

This is the inverter output maximum frequency (or target value) when there is the maximum voltage (I/O-03) on the V1 terminal.

V1 Min. Voltage V1 Max. Voltage
[Reference Frequency vs Analog Voltage Input ( 0 to 12 V )]

## 1/0-06 ~ / / O-10: Analog Current Input (I) Signal Adjustment

This is used to adjust the analog current input signal when the terminal 'I' references the frequency. This function is applied when DRV-04 is set to ' I ', or $\mathrm{V} 1+\mathrm{I}$ '. User-selected Unit appears in [**]. To change the unit, more than one in APP-02 [PID operation selection] and APP-80 [Ext. PID operation selection] is set to "Yes" and then select the desired unit Percent, Bar, mBar, kPa, and Pa among in I/O-87 [I user unit selection].

| Code | Default | Setting |
| :---: | :---: | :--- |
| I/O-06 | $10[\mathrm{msec}]$ | $0 \sim 9999[\mathrm{msec}]$ |
| I/O-07 | $4[\mathrm{~mA}]$ | $0 \sim 20[\mathrm{~mA}]$ |
| I/O-08 | $0[\mathrm{~Hz}]$ | $0 \sim$ Max freq |
|  | $0\left[{ }^{* *}\right]$ | $0 \sim 100.00\left[{ }^{* *}\right]$ |
| I/O-09 | $20[\mathrm{~mA}]$ | $0 \sim 20[\mathrm{~mA}]$ |
| I/O-10 | $60[\mathrm{~Hz}]$ | $0 \sim$ Max freq |
|  | $0[* *]$ | $0 \sim 100.00\left[{ }^{* *}\right]$ |

This is the filtering time constant for ' I ' signal input. If the 'I' signal is affected by noise causing unstable operation of the inverter, increase this value.
Increasing this value makes response time slower.

This is the minimum current of the 'I' input at which inverter outputs minimum frequency.

This is the inverter output minimum frequency (or target value) when there is minimum current (I/O-07) input on the ' I ' terminal.

This is the maximum current of the ' I ' input at which inverter outputs maximum frequency.

| $\begin{array}{\|lrl} \hline \text { I/O } & \text { I freq y2 } \\ 10 & 60.00 \mathrm{~Hz} \end{array}$ | 10 | 60.00 |
| :---: | :---: | :---: |
| Factory Default: 60.00 | Hz | 60.00 |
| $\begin{array}{lll} \hline \text { I/O } & \text { I freq } y^{2} \\ 10 & 60.00 \mathrm{~Hz} \end{array}$ | 10 | 60.00 |

target value) when there is the maximum current input (I/O-09) on the 'I' terminal.

I Min.Current I Max. Current
[Reference Frequency vs Analog Current Input (0 to 20 mA )]

## I/0-11~16: Frequency command setting via pulse (AO/BO)

| $\begin{array}{\|l\|l} \hline \text { I/O Pulse set } \\ 11 & \text { (A) } \\ \hline \end{array}$ | 11 | 1 |
| :---: | :---: | :---: |
| Factory Default: (A) |  | 1 |
| $\begin{array}{\|l\|l} \hline I / O \text { filter } \\ 12 & 10 \text { msec } \end{array}$ | 12 | 10 |
| Factory Default: 10 msec |  | 10 |
| $\square$ $\square$ $\square$ |  |  |
| $\begin{array}{\|lll} \hline \text { I/O } & \text { Pulse } & \text { x2 } \\ 15 & 10.00 ~ K H z \end{array}$ | 15 | 10 |
| Factory Default: 10.0 KHz |  | 10.0 |
| $\begin{array}{\|lcc\|} \hline \text { I/O P } & \text { pulse } & \text { y } \\ 16 & 60.00 & \mathrm{~Hz} \\ \hline \end{array}$ | 16 | 60.00 |
| Factory Default: 60.00 Hz |  | 60.00 |
| Set the frequency command from high-level controller or motor encoder signal by input terminal A0 or B0. It is settable when DRV-04 [Frequency mode] is set to "Pulse". <br> User-selected Unit appears in [**]. To change the unit, more than one in APP-02 [PID operation selection] and APP-80 [Ext. PID operation selection] |  |  |

is set to "Yes" and then select the desired unit
Percent, Bar, mBar, kPa, and Pa among in I/O-88 [Pulse Input user unit selection].

| Code | Factory setting | Setting range |
| :---: | :---: | :--- |
| I/O-11 | $(\mathrm{A})$ | $(\mathrm{A}),(\mathrm{A})+(\mathrm{B})$ |
| I/O-12 | $10[\mathrm{msec}]$ | $0 \sim 9999[\mathrm{msec}]$ |
| I/O-13 | $0[\mathrm{KHz}]$ | $0 \sim 10[\mathrm{KHz}]$ |
| I/O-14 | $0[\mathrm{~Hz}]$ | $0 \sim$ Max frequency |
|  | $0[* *]$ | $0 \sim 100.00[* *]$ |
| I/O-15 | $10[\mathrm{KHz}]$ | $10 \sim 100[\mathrm{KHz}]$ |
| I/O-16 | $60[\mathrm{~Hz}]$ | $0 \sim$ Max frequency |
|  | $0[* *]$ | $0 \sim 100.00[* *]$ |

Note: Do not apply pulse to both A0, B0 terminals when I/O-12 set value is $A$.

Pulse information

## $5.5 \sim 30 \mathrm{~kW}$

| T/N | Default | Setting range |
| :---: | :---: | :---: |
| $\begin{gathered} \text { A0 or } \\ \text { B0 } \end{gathered}$ | Pulse Input | High: +3~+5V Max <br> Low: +2V Max <br> Max Input Freq.: 100 KHz |
| 37~450kW |  |  |
| T/N | Default | Setting range |
| $\begin{gathered} \text { A0 or } \\ \text { B0 } \end{gathered}$ | Pulse Input | $\begin{aligned} & \text { High: }+12 \sim+15 \mathrm{~V} \text { Max } \\ & \text { Low: }+2.5 \mathrm{~V} \text { Max } \\ & \text { Max Input Freq.: } 100 \mathrm{KHz} \end{aligned}$ |

| Code | LCD <br> Display | Description |
| :---: | :---: | :--- |
| I/O-11 | P Pulse Set | Set one of the frequency setting <br> input method either A or A+B. |
| I/O-12 | P filter | Set the embedded filter constant <br> for P Pulse input. |
| I/O-13 | P Pulse x1 | Set the Minimum frequency for P <br> Pulse input. |
| I/O-14 | P freq y1 | Set the output frequency <br> corresponding to P Pulse input <br> minimum frequency (I/O-13). |
|  | P [**] y1 | Set the target value corresponding <br> to P Pulse input minimum <br> frequency (I//-13) |
| I/O-15 | P Pulse x2 | Set the Maximum frequency for P <br> Pulse input. |
| I/O-16 | P freq y2 | Set the output frequency <br> corresponding to P Pulse input <br> Maximum frequency (I/O-15). |
|  | P [**] y2 | Set the target value corresponding <br> to P Pulse input maximum <br> frequency (I/O-15) |

Note: Increase filter time constant when the noise interference deteriorates stable operation. Increasing that makes response time slower.
Note: When setting P Pulse Input Min/Max Freq. via motor encoder, set the value for encoder pulse as the

## following;

EX) To give 60 Hz ( 1800 rpm ) command from 1000 Pulse encoder

I/O-15 [Max Freq of P Pulse Input]=Rated rpm/60 sec * Number of Encoder Pulse
$=1800[\mathrm{rpm}] / 60[\mathrm{sec}] * 1000=3000 \mathrm{~Hz}$,
Therefore, set I/O-15 to 3.0 KHz

I/O-17, 18, 19: Criteria for Analog Input Signal Loss

| I/O Wire broken 17 None | 17 | 0 |
| :---: | :---: | :---: |
| Factory Default: None |  | 0 |
| I/OLost command <br> 18 <br> None | 18 | 0 |
| Factory Default: None |  | 0 |
| $\begin{array}{\|lrl} \hline \text { I/O } & \text { Time out } \\ 19 & 1.0 & \mathrm{sec} \end{array}$ | 19 | 1.0 |
| Factory Default: 1.0 sec |  | 1.0 |

This is to set the criteria for analog input signal loss when DRV-04 [Frequency Mode] is set to 'V1', 'V1S' 'I', 'V1+I' or 'Pulse'. Analog input loss will be applied according to the I-O-17 setting [wire broken]. However, for "V1+I", main speed is V1 so inverter does not respond when I signal is missing. Following table shows the setting value.

| Setting Range | Description |
| :---: | :--- |
| None | Disabled. (Factory Default) <br> half of x 1 <br> The inverter determines that the <br> frequency reference is lost when the <br> analog input signal is less than half of <br> the minimum set value (I/O-02, I/O- <br> 07, I/O-13). |
| below x1 | The inverter determines that the <br> frequency reference is lost when the <br> analog input signal is less than the <br> minimum set value (I/O-02 or I/O-07, <br> I/O-13). |

I/O-18 [Lost Command] selects the operation after determining the loss of frequency reference.
The following table shows the selection in I/O-18.

| Setting Range | Description |
| :---: | :--- |
| None | Continuous operating after loss of <br> frequency reference. |
| FreeRun | Inverter cuts off its output after <br> determining loss of frequency <br> reference. |
| Stop | Inverter stops by its Decel pattern and <br> Decel time after determining loss of <br> frequency reference. |
| Protection | 'Lost Cmd Trip' will be occurred <br> when the frequency command is lost. |

When the analog input signal is lost, inverter displays the following table.

| Setting Range | Description |
| :---: | :--- |
| LOV | Loss of analog input signal, V1 |
| LOI | Loss of analog input signal, I |
| LOA | Loss of pulse reference frequency |

I/O-19 [Time out] sets the waiting time before determining the loss of reference signal. Inverter waits to determine the loss of a reference signal until time-out.

Reference frequency can be viewed as Rpm when DRV-16 [Hz/Rpm Display] is set to "rpm".

## I/O-20~27: Programmable Digital Input Terminal 'M1, M2, M3', 'M4', 'M5', 'M6', 'M7', 'M8' Define

## $\square$ $\square$ $\square$

Programmable Digital input terminals can be defined for many different applications. The following table shows the various definitions for them.

| Code | LCD display | Default | Setting |
| :---: | :---: | :---: | :---: |
| I/O-20 | M1 define | SPEED-L |  |
| I/O-21 | M2 define | SPEED-M |  |
| I/O-22 | M3 define | SPEED-H |  |
| I/O-23 | M4 define | Reset | See the |
| I/Ob-24 | M5 define | BX |  |
| I/O-25 | M6 define | JOG |  |
| I/O-26 | M7 define | FX |  |
| I/O-27 | M8 define | RX |  |

Note: BX is Emergency Stop key. Parameter setting is disabled when $B X$ is $O N$.

Selection of M1, M2, M3 M4, M5, M6, M7, M8 in I/O-20~27

| Setting Range | Description |
| :---: | :--- |
| Speed-L | Multi-step speed - Low |
| Speed-M | Multi-step speed - Mid |
| Speed-H | Multi-step speed - High |

| RX | Analog input Switch-over |
| Ana Change excitation. |  |
| Pre excite | External PID Run/Stop |
| Ext.PID Run | Clear Up/Down save |
| Up/Dn Clr |  |

[Speed-L, Speed-M, Speed-H, Speed-X]
By setting M1, M2, M3 terminals to 'Speed-L',
'Speed-M' and 'Speed-H' respectively, inverter can operate at the preset frequency set in DRV-05 ~ DRV-07 and I/O-20 ~ I/O-27, I/O-30~IO/42 [Multistep operation].
[XCEL-L, XCEL-M, XCEL-H]
By setting M1, M2 and M3 terminals to 'XCEL-L', 'XCEL-M' and 'XCEL-H' respectively, up to 8 different Accel and Decel times can be used. The Accel/Decel time is set in DRV-01 ~ DRV-02 and I/O-50 ~ I/O-63.

## [Dc-brake]

DC Injection Braking can be activated during inverter stop by configuring one of the Programmable digital input terminals (M1-M8) to 'Dc-bake'. The preset DC-start value in FU1-22 is applied. To activate the DC Injection Braking, close the contact of the assigned terminal while the inverter is stopped.

## [ $2^{\text {nd }}$ function]

2nd function can be activated during inverter stop by configuring one of the Prorammable digital input terminals (M1-M8) to '2nd func'. See APP 20~29 for details.

## [EXCHANGE]

Exchange is used to bypass the motor from the inverter line to commercial power or the opposite. To bypass the motor to commercial line, set the 'Exchange' function in one of the Programmable digital input terminal in I/O-20~27 and 'INV line', 'COMM line' function in Programmable digital output terminal(AX-CX) in I/O-76~79.

## [Up, Down]

By using the Up and Down function, the drive can accelerate to a steady speed and decelerate down to a desired speed by using only two input terminals. Setting limit is Maximum frequency.

## [3-Wire]

This function is for 3-wire start/stop control This function is mainly used with a momentary push button to hold the current frequency output during acceleration or deceleration.
(Ex. Set M1 terminal to FX, M2 terminal to RX, M3 terminal to 3-Wire.)

## [iTerm Clear]

This function is used for PID control. When this terminal is ON, the accumulated value by I-Gain is set to ' 0 '. Refer to PID Control Block Diagram.

## [Open-loop]

This is used to exchange the control mode of inverter from PID mode (Close Loop) to V/F mode (Open Loop).
DRV-03 [Drive Mode] and DRV-04 [Frequency
Mode] are applied when the mode has been changed.
Note: Only used when the inverter is stopped.

## [LOC/REM]

When an option board or embeded RS485 communication is used for the frequency setting and the run/stop command setting, and the setting is ON, the inverter operation can be changed to Option (or RS485) operation without changing parameters. When 'LOC/REM' is inputted, it operates according to DRV-22[LocalRemKey]. Please refer to details for DRV-22 function.

## [Analog hold]

When there is an analog input signal for frequency reference and 'Analog hold' terminal is ON, inverter fixes its output frequency regardless of the frequency reference. When the terminal is OFF, the actual frequency reference will be applied.
This function is useful when a system requires constant speed after acceleration or freq reference is not necessary to be changed.

[XCEL stop]
Inverter stops accelerating and decelerating when this terminal is ON.

## [P Gain 2]

This function is used to change P-Gain during PID operation. When this terminal is ON, PID controller changes P-Gain to PID P2-Gain.
Refer to PID Control Block Diagram.
[Interlock 1, 2, 3, 4]
This function is used for MMC operation. When MMC is selected in APP-01 and interlock is set, M1, M2, M3 and M4 are automatically assigned for Interlock function. Therefore, these terminals cannot be used for setting other functions when interlock is active. Use M5, M6, M7, and M8 for other function setting. Refer to MMC operation.

## [Reset]

This function is set to use it as fault reset terminal when ON.

## [BX]

This function is set to use it as Emergency Stop terminal when ON.

## [JOG]

This function is set to use Jog operation terminal when ON.

## [FX/RX]

This function is set to issue Forward/Reverse Run.

## [Ana Change]

Inverter changes its frequency reference source from V1 to I when ON.

Ex) In the case of V1+I operation, V1 is the default setting and it is changed to $I$ operation when the terminal is turned ON .
[Pre excite]
This setting switches the inverter to pre-excition state This function applies the DC magnetizing current to a motor to build the flux in Sensorless control. When the operation command is set to ON , the state changes from pre-excitation to normal.

## [Ext.PID Run]

External PID controller begins operation when the defined terminal is turned ON. This can be operated regardless of inverter reference command or used in conjunction with internal PID operation. Refer to External PID operation for details
[Up/Dn Clr (Clear Up/Down save)]
This function is used for Reset (Clear) the saved frequency when FU1-80 ( $\mathrm{Up} / \mathrm{Dn}$ save) is set.

I/0-28: Terminal Input Status

| I/OM In status <br> 28 00000000000 | $\mathbf{2 8}$ | $\mathbf{0 0 0 0}$ |
| :--- | :---: | :---: |
| Factory Default: 00000000000 | $\mathbf{0 0 0 0}$ |  |

This code displays the input status of control terminals M1-M8, P4-P6. P4, P5, P6 will be only displayed and used when the sub-board is installed.

| [LCD Keypad Display] |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | P6 | P5 | P4 | M8 | M7 | M6 | M5 | M4 | M3 | M2 | M1 |
| T/M | $\begin{aligned} & 10 \\ & \text { bit } \end{aligned}$ | $\begin{gathered} 9 \\ \text { bit } \end{gathered}$ | $\begin{gathered} 8 \\ \text { bit } \end{gathered}$ | $\begin{gathered} 7 \\ \text { bit } \end{gathered}$ | $\begin{gathered} \mathbf{6} \\ \text { bit } \end{gathered}$ | $\begin{gathered} \mathbf{5} \\ \text { bit } \end{gathered}$ | $\begin{gathered} 4 \\ \text { bit } \end{gathered}$ | $\begin{gathered} 3 \\ \text { bit } \end{gathered}$ | $\begin{gathered} 2 \\ \text { bit } \end{gathered}$ | $\begin{gathered} \mathbf{1} \\ \text { bit } \end{gathered}$ | $\begin{gathered} 0 \\ \text { bit } \end{gathered}$ |

| ON <br> status | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 |

## I/O-29: Programmable Digital Input Terminal filter

 time constant

Set the responsiveness of input terminals M1-M8 and P4-P6. It is effective when noise level is high. Increasing this will make response time slower and decreasing faster.

| Code | LCD display | Default | Setting range |
| :---: | :---: | :---: | :---: |
| I/O-29 | Ti Filt Num | $15[\mathrm{~ms}]$ | $2 \sim 1000[\mathrm{~ms}]$ |

Note: Set it higher than 100 msec at Invertercommercial line exchange operation. This will be useful to prevent chattering and momentary malfunction.

## 1/O-30: Jog Frequency

This code sets the jog frequency. See I/O-31~42, DRV-05~ 07 for details.

## I/0-31~42: Step Frequency $4,5,6,7,8,9,10,11$, 12, 13, 14, 15

| $\begin{array}{\|cc\|} \hline \text { I/O } & \text { Step freq-4 } \\ 31 & 40.00 \mathrm{~Hz} \end{array}$ | 31 | 40.00 |
| :---: | :---: | :---: |
| Factory Default: 40.00 | Hz | 40.00 |
| $\begin{array}{\|cc} \hline \text { I/O } & \text { Step freq-5 } \\ 32 & 50.00 \mathrm{~Hz} \end{array}$ | 32 | 50.00 |
| Factory Default: 50.00 | Hz | 50.00 |

The step frequencies are determined by the combination of M1, M2 and M3 terminals as shown in the following table.

| Code | Step speed <br> Frequency | Spd-X | Spd-H | Spd-M | Spd-L | JOG |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| DRV-00 | $\begin{aligned} & \text { S. Freq-0 } \\ & \text { (Zero Spd) } \end{aligned}$ | 0 | 0 | 0 | 0 | 0 |
| I/O-30 | Jog Freq | X | X | X | X | 1 |
| DRV-05 | S. Freq-1 (Spd 1) | 0 | 0 | 0 | 1 | 0 |
| DRV-06 | S. Freq-2 (Spd 2) | 0 | 0 | 1 | 0 | 0 |
| DRV-07 | S. Freq-3 (Spd-3) | 0 | 0 | 1 | 1 | 0 |
| I/O-31 | S. Freq-4 (Spd-4) | 0 | 1 | 0 | 0 | 0 |
| I/O-32 | S. Freq-5 (Spd-5) | 0 | 1 | 0 | 1 | 0 |
| I/O-33 | S. Freq-6 (Spd-6) | 0 | 1 | 1 | 0 | 0 |
| I/O-34 | S. Freq-7 (Spd-7) | 0 | 1 | 1 | 1 | 0 |
| I/O-35 | S. Freq-8 (Spd-8) | 1 | 0 | 0 | 0 | 0 |
| I/O-36 | S. Freq-9 (Spd-9) | 1 | 0 | 0 | 1 | 0 |
| I/O-37 | $\begin{gathered} \text { S. Freq-10 } \\ (\text { Spd-10 }) \end{gathered}$ | 1 | 0 | 1 | 0 | 0 |
| I/O-38 | $\begin{gathered} \text { S. Freq-11 } \\ (\text { Spd-11) } \end{gathered}$ | 1 | 0 | 1 | 1 | 0 |
| I/O-39 | $\begin{gathered} \text { S. Freq-12 } \\ (\text { Spd-12 }) \end{gathered}$ | 1 | 1 | 0 | 0 | 0 |
| I/O-40 | $\begin{gathered} \text { S. Freq-13 } \\ (\text { Spd-13 } \end{gathered}$ | 1 | 1 | 0 | 1 | 0 |
| I/O-41 | $\begin{aligned} & \text { S. Freq-14 } \\ & \text { (Spd-14) } \end{aligned}$ | 1 | 1 | 1 | 0 | 0 |
| I/O-42 | $\begin{gathered} \text { S. Freq-15 } \\ (\text { Spd-15 }) \\ \hline \end{gathered}$ | 1 | 1 | 1 | 1 | 0 |

0: OFF, 1: ON, X: Ignored (Jog first)
Speed-L: Lowest bit in Multi-Step speed input
Speed-M: Middle bit in Multi-Step speed input
Speed-H: High bit in Multi-Step speed input
Speed-X: Highest bit in Multi-Step speed input
Note 1: 'Speed 0' is set in DRV-04.
Note 2: If the 'Jog' terminal is ON, inverter operates at Jog
frequency regardless of other terminal inputs.

| DRV-04 Data | DRV-00 Speed 0 | Freq source |
| :---: | :---: | :---: |
| Keypad-1 | Digital Freq Ref | Keypad |
| Keypad-2 | Digital Freq Ref | Keypad |
| V1 | Analog Freq Ref. | Terminal |
| V1S | Analog Freq Ref. | Terminal |
| I | Analog Freq Ref. | Terminal |
| V1+I | Analog Freq Ref. | Terminal |
| Pulse | Pulse Freq Ref. | Terminal |
| Int. 485 | Communication | Terminal |
| Ext. PID | Ext. PID Freq Ref. | Keypad or <br> Terminal |

* Setting example

M1=Speed-L, M2=Speed-M, M3=Speed-H, M4=Jog
M5=BX, M7=FX, M8=RX
Step speed is to be set in DRV-05~06, I/O-31~42

[Multi-Step Frequency Operation]
1/0-50~63: $1^{\text {st }} 7^{\text {th }}$ Accel/Decel Time

| $\begin{array}{\|l\|l\|} \hline \text { I/O } & \text { Acc time-1 } \\ 50 & 20.0 \mathrm{sec} \end{array}$ | 50 | 20.0 |
| :---: | :---: | :---: |
| Factory Default: 20.0 sec |  | 20.0 |
| $\begin{array}{\|lr} \hline \text { I/O } & \text { Dec time-1 } \\ 51 & 20.0 \mathrm{sec} \end{array}$ | 51 | 20.0 |
| Factory Default: 20.0 sec |  | 20.0 |

The Accel/Decel time is determined by the combination of M1, M2 and M3 terminals as shown in the following table.

| Parameter <br> Code | Accel/ <br> Decel <br> Time | $\begin{array}{\|c\|} \hline \text { XCEL } \\ -H \\ \text { (M3) } \\ \hline \end{array}$ | $\begin{array}{\|c\|} \hline \text { XCEL } \\ -M \\ (M 2) \\ \hline \end{array}$ | $\begin{array}{\|c} \text { XCEL } \\ \text {-L } \\ \text { (M1) } \\ \hline \end{array}$ | Factory defualt |
| :---: | :---: | :---: | :---: | :---: | :---: |
| DRV-01 | Accel <br> Time-0 | 0 | 0 | 0 | 10 sec |
| DRV-02 | $\begin{gathered} \text { Decel } \\ \text { Time-0 } \end{gathered}$ |  |  |  | 20 sec |
| I/O-50 | Accel <br> Time-1 | 0 | 0 | 1 | 20 sec |
| I/O-51 | Decel <br> Time-1 |  |  |  | 20 sec |
| I/O-52 | Accel <br> Time-2 | 0 | 1 | 0 | 30 sec |
| I/O-53 | $\begin{gathered} \text { Decel } \\ \text { Time-2 } \end{gathered}$ |  |  |  | 30 sec |
| I/O-54 | Accel <br> Time-3 | 0 | 1 | 1 | 40 sec |

0: OFF, 1: ON

[Multi-Accel/Decel Time Operation]

## 1/0-70~73: S0, S1 terminal select

| $\begin{array}{\|ll\|} \hline \text { I/O } & \text { S0 mode } \\ 70 & \text { Frequency } \end{array}$ | 70 | 0 |
| :---: | :---: | :---: |
| Factory Default: Frequenc |  | 0 |
| $\begin{array}{\|lcc} \hline \text { I/O } & \text { S0 adjust } \\ 71 & 100 \% \end{array}$ | 71 | 100 |
| Factory Default: 100 \% |  | 100 |
| $\begin{array}{ll} \hline \text { I/O } & \text { S1 mode } \\ 72 & \text { Voltage } \end{array}$ | 72 | 0 |
| Factory Default: Voltage |  | 2 |
| I/O S1 adjust <br> 73 $100 \%$ | 73 | 100 |
| Factory Default: 100 \% |  | 100 |

Analog meter displays the inverter output Frequency, Current, Voltage, DC link voltage and External PID output with pulse signals on the S0, S1 terminal. The average output voltage range is 0 V to 10 V for S 0 and S1 terminals. I/O-71, 73 are used to adjust the S0, S1 output gain value.

| Code | LCD <br> Display | Description | Factory <br> Defualt | Setting Range |
| :--- | :--- | :--- | :--- | :--- |
| I/O- <br> 70 | S0 <br> mode | Select S0 <br> terminal | 0 <br> (Freq.) | 1 (Frequency) <br> 2 (Voltage) <br> 3 (DC link Vtg) <br> 4 (Ext.PID Out) |
| I/O- <br> 71 | S0 <br> adjust | S0 Output <br> Voltage <br> Gain | 100 [\%] | $0 \sim 200$ [\%] |
| I/O- | S1 <br> mode | Select S1 <br> terminal | 2 (Vol.) | 1 (Current) <br> 2 (Voltage) <br> 3 (DC link Vtg) <br> (Dxt.PID Out) |
| I/O- <br> 73 | S1 <br> adjust | S1 Output <br> Voltage <br> Gain | 100 [\%] | $0 \sim 200$ [\%] |

## [Frequency]

S0/S1 terminal outputs inverter output frequency.
The output value is determined by,
S0/S1 Output Voltage $=($ Output freq. $/$ Max. freq. $) \times$ $10 \mathrm{~V} \times \mathrm{S} 0, \mathrm{~S} 1$ output gain (IO-71 or 73)/ 100

## [Current]

S0/S1 terminal outputs inverter output current. The output value is determined by,
S0/S1 Output Voltage $=($ Output current $/$ Rated current) $\times 10 \mathrm{~V} \times \mathrm{S} 0, \mathrm{~S} 1$ output gain (IO-71 or 73)/ 100
[Voltage]
S0/S1 terminal outputs inverter output voltage. The output value is determined by,
S0/S1 Output Voltage $=($ Output voltage $/$ Max. output voltage) $\times 10 \mathrm{~V} \times \mathrm{S} 0, \mathrm{~S} 1$ output gain (IO-71 or 73)/ 100

Note: Maximum output voltage for 200 V class is 220 V and for 400 V class is 440 V .
[DC link vtg]
S0/S1 terminal outputs the DC link voltage of inverter. The output value is determined by, S0/S1 Output Voltage $=(\mathrm{DC}$ link voltage $/ \mathrm{Max} . \mathrm{DC}$ link voltage) $\times 10 \mathrm{~V} \times \mathrm{S} 0, \mathrm{~S} 1$ output gain (IO-71 or 73)/100

Note: Maximum DC Link Voltage for 200 V class is 410 V and for 400 V class is 820 V .
[Ext.PID Out]
S0/S1 terminal outputs External PID output. The output value is determined by,
S0/S1 output voltage $=($ External PID output/10,000 $)$
$\times 10 \mathrm{~V} \times \mathrm{S} 0, \mathrm{~S} 1$ output gain (I/O-71,73)/100
Please refer to Chapter 2 Specification for rated current of motor.

| I/0-74: FDT (Frequency Detection) Level I/0-75: FDT Bandwidth |  |  |
| :---: | :---: | :---: |
| $\begin{array}{\|ll} \hline \text { I/O } & \text { FDT freq } \\ 74 & 30.00 \mathrm{~Hz} \end{array}$ | 74 | 30.00 |
| Factory Default: 30.00 Hz |  | 30.00 |
| $\begin{array}{\|ll} \hline \text { I/O } & \text { FDT band } \\ 75 & 10.00 \mathrm{~Hz} \end{array}$ | 75 | 10.00 |
| Factory Default: 10.00 Hz | Hz | 10.00 |

These functions are used in I/O-76-79
[Programmable Digital Auxiliary Output Terminal]. See [FDT-\#] in I/O-76~79.

Use Sub-Boards if you need to use Programmable Digital output terminal Q1, Q2, and Q3.

I/0-76~79: Programmable Digital Auxiliary Contact Output mode 1, 2, 3, 4 define (AX-CX)

| Code | LCD <br> Display | Description | Factory <br> Defualt | Setting <br> Range |
| :--- | :--- | :--- | :--- | :--- |
| I/O- <br> 78 | Aux <br> mode 3 | Multi-Aux. contact <br> output 3 | None | Refer to <br> below <br> table. |
| I/O- <br> 79 | Aux <br> mode 3 | Multi-Aux. contact <br> output 3 | None | Refer to <br> below <br> table. |

The auxiliary contact works (Close) when the defined condition has occurred.

| Setting Range | Description |
| :---: | :--- |
| None | None |
| FDT-1 | Output frequency arrival <br> detection |
| FDT-2 | Specific frequency level <br> detection |
| FDT-3 | Frequency detection with pulse |
| FDT-4 | Frequency detection 1 with <br> contact closure |
| FDT-5 | Frequency detection 2 with <br> contact closure |
| OL | Overload detection |
| IOL | Inverter overload detection |
| Stall | Stalling |
| OV | Over voltage detection |
| LV | Low voltage detection |
| OH | Inverter overheat detection |
| Lost Command | Lost command detection |
| Run | Inverter running detection |
| Stop | Inverter stop detection |
| Steady | Steady speed detection |
| INV line | Exchange signal outputs |
| COMM line | Speed search mode detection |
| Speedsearch | Inverter ready detection |
| Ready | Used for MMC operation |
| MMC |  |

[FDT-1]
When the output frequency reaches the reference frequency (target frequency), AX-CX terminal is CLOSED

Detecting Condition: Value (Ref. Freq-Output Freq) $<=$ Freq Detection Bandwidth (I/O-75)/2

*AX: A1~A4, CX: C1~C4
[FDT-2]
AX-CX is CLOSED when the reference frequency is in I/O-75 [FDT Bandwidth] centered on I/O-74 [FDT Frequency], and the output frequency reaches I/O-75 centered on I/O-74.
Detecting Condition: FDT-1 condition \& (Value (Output Freq- Freq Detection)<= Freq Detection Bandwidth (I/O-75)/2)

## [FDT-3]

AX-CX is CLOSED when the output frequency reaches the band centered on the FDT frequency. The output is OPENED when the output frequency goes outside the FDT bandwidth centered on the FDT frequency.
Detecting Condition: Value (Freq Detection (I/O-74)-Output Freq)<= Freq Detection Bandwidth (I/O-75)/2

[AX-CX configured as 'FDT-3']

## [FDT-4]

AX-CX is CLOSED when the output frequency reaches the FDT frequency. The output is OPENED when the output frequency goes below the FDT bandwidth centered on the FDT frequency.
Detecting Condition:
During Accel: Output freq $>=$ Freq Detection During Decel: Output freq $>$ (Freq Detection (I/O74) - Freq Detection Bandwidth (I/O-75)/2)

## [FDT-5]

This is the inverted output of [FDT-4].
Detecting Condition:
During Accel: Output freq >= Freq Detection
During Decel: Output freq $>$ (Freq Detection (I/O-74) -
Freq Detection Bandwidth (I/O-75)/2)

[OL]
AX-CX is CLOSED when the output current has reached the FU1-64 [Overload Warning Level] for the FU1-65 [Overload Warning Time].

[AX-CX configured as ' $\mathrm{OL}^{\prime}$ ']
[IOL]
AX-CX is CLOSED when the output current is above the $110 \%$ of rated inverter current for 36 seconds. If this situation is continued for one minute, the inverter will cut off its output and displays 'IOL' (Inverter overload) Trip. See the nameplate for the rated inverter current. (IOL has the the inverse time characteristic $\left(\mathrm{I}^{2} \mathrm{t}\right)$ and outputs the alarm signal when the time is passed $60 \%$ of the designated trip time.)

[AX-CX configured as 'IOL']

## [Stall]

AX-CX is CLOSED when the inverter is on the stal prevention mode.

## [OV]

AX-CX is CLOSED when the DC link voltage is above the Over-voltage level.

[LV]
AX-CX is CLOSED when the DC link voltage is below the Low-voltage level.

## [OH]

AX-CX is CLOSED when the heat sink of the inverter is above the reference level.

## [Lost Command]

AX-CX is CLOSED when frequency reference is lost.
Refer to I/0-18, I/O-92 and I/O-93.
[Run]
AX-CX is CLOSED when the inverter is running. (Signal is not generated at DC braking.)

1) It outputs the signal from above start frequency (FU1-32).
-. It does not output in 0 Hz operation.
2) It output the signal when DC Start, DC Brake, Pre-Heat, etc..

- It does not output in auto-tuning.

## [Stop]

AX-CX is CLOSED when the inverter is stopped.

## [Steady]

AX-CX is CLOSED when the inverter is running at constant speed.
[INV line, COMM line]
This function is used in conjunction with 'Exchange' function of Programmable digital input for commercial line exchange.

1) Speed search function (FU2-22) is activated automatically during exchanging operation, enabling smooth exchange.
2) Before the operation, the below setting is necessary.

- Programmable intput terminal set to 'Exchange'.
- Programmable output terminal set to 'INV line'.
- Programmable output terminal set to 'COMM line'.

Note: I/O-29 [Filtering Time Constant for Programmable Digital Input Terminals] must be set to more than 100 [msec] to prevent chattering and momentary malfunction during this function.
Note: The function is invaild in operation.

## [MMC]

Automatically set to 'MMC' when 'MMC' is selected in APP-01.

I/O-80: Fault Output Relay (3A, 3B, 3C)

| I/O Relay mode  <br> 80 $\mathbf{8 0}$ <br> 80  | $\mathbf{8 0}$ | $\mathbf{0 1 0}$ |
| :--- | :---: | :---: |
| Factory Default: 010 | $\mathbf{0 1 0}$ |  |

This function is used to allow the fault output relay to operate when a fault occurs. The output relay terminal is 3A, 3B, 3C where 3A-3C is a normally open contact and 3B-3C is a normally closed contact.

| Bit | Setting | Display | Description |
| :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { Bit } 1 \\ & (\mathrm{LV}) \end{aligned}$ | 0 | 000 | Fault output relay does not operate at 'Low voltage' trip. |
|  | 1 | 001 | Fault output relay operates at ‘Low voltage' trip. |
| $\begin{gathered} \text { Bit } 2 \\ \text { (Trip) } \end{gathered}$ | 0 | 000 | Fault output relay does not operate at any fault. |
|  | 1 | 010 | Fault output relay operates at any fault except 'Low voltage' and 'BX' (inverter disable) fault. (Over current, Over current protection, Over voltage, Electric Thermal, Arm short, Ground short, Overheat etc.) |
| $\begin{gathered} \text { Bit } 3 \\ \text { (Retry) } \end{gathered}$ | 0 | 000 | Fault output relay does not operate regardless of the retry number. |
|  | 1 | 100 | Fault output relay operates when the retry number set in FU2-25 decreases to 0 by faults. <br> Disabled while Auto retry is ON. |

When several faults occurred at the same time, Bit 1 has the first priority. (Active order: Bit 1->Bit 2->bit3)

## I/O-81: Terminal Output Status

| I/O Out status <br> 81 | $\mathbf{8 1}$ | $\mathbf{0 0 0 0 0 0 0}$ |
| :--- | :---: | :---: |$\quad \mathbf{8 0 0}$| Factory Default: 00000000 | $\mathbf{0 0 0 0}$ |
| :--- | :--- |

This code displays the status of AXA-AXC 1~4, the output status of control terminals $\mathrm{Q} 1 \sim \mathrm{Q} 3$ and the fault relay 3A,3C.
Use Sub-Boards if you need to use Programmable Digital output terminal Q1, Q2, and Q3.
[LCD Keypad Display]

| Output | 3A- <br> 3C | Q3 | Q2 | Q1 | AUX <br> 4 | AUX <br> 3 | AUX <br> $\mathbf{2}$ | 1 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Terminals | Bit 7 | Bit 6 | Bit 5 | Bit 4 | Bit 3 | Bit 2 | Bit 1 | Bit 0 |
| OFF status | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| ON status | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 |

## I/O-82, 83: Fault Relay On/Off Delay Time

$\left.\begin{array}{|l|c|c|}\hline \begin{array}{l}\text { I/O Relay On } \\ 82\end{array} & \mathbf{8 2} \\ 0.0 & \text { sec }\end{array}\right]$

Fault relay output is delayed for the set time and it is turned ON/OFF after the set time.

## I/O-84: Cooling Fan Control Selection

Caution: I/O-84, 85 are only available for inverters 37 kW and higher.

I/O-86, -87: To Cahnge the Unit of Analog Input

| I/O V1 Unit Sel  <br> 86 Percent | 86 | 0 |
| :---: | :---: | :---: |
| Factory Default: Percent |  | 0 |
| I/OUnit Max Val <br> 87 Percent | 87 | 0 |
| Factory Default: Speed |  | 0 |

| No | I/O-86 <br> set data | Description |
| :---: | :---: | :--- |
| 0 | Percent | Flux, Pressure, Temperature are <br> indicated by [\%]. |
| 1 | Bar | Pressure is indicated by [Bar]. |
| 2 | mBar | Pressure is indicated by [mBar]. |
| 3 | kPa | Pressure is indicated by [kPa]. |
| 4 | PSI | Pressure is indicated by [PSI]. |
| 5 | Pa | Pressure is indicated by [Pa]. |

After Setting APP-02 [proc PI mode] to "Yes", set one of the unit: Percent, Bar, mBar, $\mathrm{kPa}, \mathrm{PSI}, \mathrm{Pa}$ at I/O-86 [User unit selection]. Then, all the unit related to inverter target frequency is changed.

Set APP-02 [proc PI mode] to "No" I/O-86 [User unit selection] is initialized by "Percent".

| No | I/O-87 <br> set data | Description |
| :---: | :---: | :---: |
| 0 | Unit Max Val | Set the Max. value of unit. |

I/O-87 [Unit Max Val] indicates Max setting value for each unit which is possible to operate. Each system may have different value: Max Flux, Pressure, Temperature for max frequency according to the system, I/O-87 [User unit selection] is useful to user. For example, There are 3 Control systems.
When Max frequency of inverter is 60 Hz , Each system indicates pressures: Control system 1 shows 100Bar, Control system 2 shows 80Bar, Control system 3 shows 120Bar. It makes easy to find the pressure corresponding to Max frequency of each control system by inputting in I/O-87 [Unit Max Val].

I/O-95: Normal Open/ Normal Close select

| I/O In NO/NC Set <br> 95 00000000000 | $\mathbf{9 5}$ | $\mathbf{0 0 0 0}$ |

$$ <br>
\hline Caution: I/O-76~79 value is not initialized <br>

automatically even though "None" is set after\end{array}\right.\right\}\)| setting "MMC". In this case, set the I/O-76~79 |
| :--- |
| again for desired selection. |

## APP-02: PID Operation Selection

| APP Proc PI mode <br> 02 $\mathbf{0 2}$ <br> No  | $\mathbf{0}$ |  |
| :--- | :---: | :---: |
| Factory Default: | No | $\mathbf{0}$ |

This function can be used for Process control like flow, pressure, and air volume control.
To use this function, set APP-02 [proc PI mode] to "Yes". PID control detects the amount of feedback from a sensor and compares it with the target value. If the values differ, this function produces an output to eliminate the deviation. In other words, this control matches the feedback amount with the target value.

For HVAC or Pump applications, the PID control can be used to adjust the actual output by comparing a feedback with a 'Set-point' given to the inverter. This 'Set-point' can be in the form of Speed, Temperature, Pressure, Flow level, etc. The 'Set-point' and the feedback signals are provided externally to the inverter analog input terminals. The inverter compares the signals in calculating 'total-error' which is reflected in the inverter output.

Note: PID control can be bypassed to manual operation temporarily by defining one of the Programmable input terminals (M1~M8, P4~P6) to "Open-loop". The inverter will change to manual operation from PID control when this terminal is ON, and change back to PID control when this terminal is OFF.

## [P Control]

An error will be occurred for the input during steady state when P control used alone without I control. This control is to compensate the error for a system input proportionally. This is used to make the controller to respond fast for an error. When P control is used alone, the system is easily affected by an external disturbance during steady state. If I Control is included, error can be eliminated.

## [I Control]

I control system to plant is unstable for Integral Gain Ki. This is to compensate the error of a system integrally but it makes the system unstable. This is used to compensate the steady state error by accumulating them. Using this control alone makes the system unstable and that application is rarely used. PI control is usually used to eliminate the error for the input during steady state.

## [PI control]

If PI control is stable for the input (base input, disturbance), the error will not be occurred. This control is stable in many systems. If "D control" is added, it becomes the $3^{\text {rd }}$ order system. In some systems this may lead to system instability since Proportional gain Kp is incresed .

## [D Control]

Since the D control uses the variation ratio of error, it has the merit of controlling the error before the error is too large. The D control requires a large control quantity at start, but has the tendency of increasing the stability of the system. This control does not affect the steady state error directly, but increases the system gain because it has an attenuation effect on the system. As a result, the differential control component has an effect on decreasing the steady state error. Since the D control operates on the error signal, it cannot be used alone. Always use it with the P control or PI control.

Parameter setting example for PID operation
(1) Set APP-02 [PID operation selection] to "Yes."
(2) Set APP-06 [PID feedback selection] among I,

V1 and Pulse.
(3) Set the unit to view feedback value in I/O-86~88
[User unit selection]. Then, all the unit related to inverter target frequency is changed.
(4) Set the appropriate value in APP-04~05 (Refer to the following PID block diagram).
(5) When APP-04 is set to "No," DRV-04 [Freq

Mode] becomes PID reference. If APP-04 is set to "Yes", the value set in APP-05 becomes PID reference. If setting one of I/O-20~27 [Programmable digital input terminal selection] to "Open loop" and tuning On/Off the selected terminal, it is decided whether DRV-04 [Freq Mode] becomes Target freq or Target freq becomes PID Output.

In general, the PID output becomes inverter's "Target Freq". In this case, PID is controlling the whole system and the PID output becomes the target freq of the system and inverter is operating according to Accel/Decel Time. PID control sampling time is 10 msec .

## PID Wiring Example

## - P Gain

This controls the output that is proportional to the current error value. P Gain means that if Reference is supplied to

$100 \%$ and Feedback is maintained to $0 \%$, namely, error keeps the value to $100 \%$, output changed from $0 \%$ to $100 \%$ when Pgain is $100 \%$. Output become $100 \%$ when maximum frequency is $100 \%$. For example, Output frequency become 60 Hz when maximum frequency is 60 Hz . Hence, $P$ controller has maximum P Gain, it can output the maximum output frequency with $10 \%$ error value.

## - I Gain

This controls the output properly that is proportional to accumulated error. I controller must be displayed the time value. I Gain means the time to take the I controller output from $0 \%$ to $100 \%$ during x sec with $100 \%$ error when Reference is supplied to $100 \%$ and Feedback is maintained to $0 \%$.

- D Gain

This controls the responding the rate of change or Error. It is multiplying this rate of change by this value. D controller is determined as below formula since D controller has the difference between the mathematical formula and actual application.
$K d \times \frac{E(n)-E(n-1)}{T s} \times\left(1-e^{- \text {Dtime }}\right)$
The output by D Gain become to $100 \%$ when Referenc become to $100 \%$ and Feedback keep the value to $0 \%$, namely, Error value become to $0 \%$ at $\mathrm{T}=0$ and it is changed to $100 \%$ at next sampling and then it keeps the $100 \%$ value. D time is determined by remaining time that the output is reduced to $3 \%$ gradually.

## APP-03: PID F Gain Selection APP-04: PID Aux. Reference Mode Selection APP-05: PID Aux. Reference Selection

| $\begin{array}{\|lc} \hline \text { APP PID F-Gain } \\ 03 & 0.0 \% \end{array}$ | 03 | 0.0 |
| :---: | :---: | :---: |
| Factory Default: 0.0\% |  | 0.0 |

This code sets F Gain for use in Feed Forward control.
When it is set to $100 \%$, the responsiveness (\%) of output F gain from the controller reference value is $100 \%$. Used when fast response is needed.
Caution: Control System output may become unstable if this value is set too high.

This code selects PID Aux Ref. Input Enable/Disable. See PID Block Diagram for details.

This code sets the source of Aux reference signal.
Caution: When APP-04 is set to "No," DRV-04, Multi-step frequency, UP/DOWN, Jog frequency become PID controller's reference and when set to "Yes," PID reference is issued from the set value in APP-05 [PID Aux Reference signal selection] .

```
APP-06: PID Feedback Signal Selection
APP-07: Meter I Max Value
APP-08: Meter V Max Value
APP-09: Meter P Max Value
```

| APP PID F/B <br> 06 | $\mathbf{0 6}$ |
| :--- | :---: |
| I |  |$\quad \mathbf{0}$

Select the feedback signal for PID control. This can be set one of 'I' ( $4-20 \mathrm{~mA}$ ), 'V1' ( $0 \sim 12 \mathrm{~V}$ ) and 'Pulse' (A0 and B0, $0 \sim 100 \mathrm{kHz}$ ). Refer to I/O-06~10 for I, I/O-01~05 for V1, I/O-11~16 for Pulse.

| APP meter   <br> 09 P max <br> 100 kHz  | $\mathbf{0 9}$ | $\mathbf{1 0 0}$ |
| :--- | :---: | :---: | :---: |
| Factory Default: | 100 kHz | $\mathbf{1 0 0}$ |

APP-07 [Meter I Max], APP-08 [Meter V Max], APP-09 [Meter P Max] are can be set according to APP-06 selection. FeedBack depends on system or sensor specification. Therefore, By using Max value of Feedback in calculation. Next Figure shows Max Feedback Max value is 10 V and 5 V respectively.

This is P Gain of PID controller . If I Gain is 0 with $100 \%$ error, P Gain outputs the $100 \%$ value. In addition, If I Gain is 0 with $100 \%$ error, $P$ Gain output the $50 \%$ value.

| APP PID I Time $12 \quad 10.0 \mathrm{sec}$ | 12 | 10.0 |
| :---: | :---: | :---: |
| Factory Default: 10.0 |  | 10.0 |

This is I Time of PID controller. I Gain is 1 second that the output value is accumulated to $100 \%$ when P Gain is 0 with maintaining $100 \%$ error. Namely, I Gain is 30 seconds that means the output value is accumulated to $100 \%$ during 30 seconds with maintaining $100 \%$ error. $100 \%$ error means reference value is set but feedback value is 0 .

This code sets the differential Gain of PID Controller.

| APP-14: High limit freq for PID control |
| :--- |
| APP-15: Low limit freq for PID control |
| APP-16: PID Output Scale |
| APP-17: PID P2 Gain |

| APP PID Hi Limit |  |
| :--- | ---: | :--- | :--- |
| 14 | 60.00 Hz |$\quad \mathbf{1 4} \quad \mathbf{6 0 . 0 0}$

Factory Default: 60.00 Hz

| APP PID Low Limit  <br> 15 0.5 Hz | $\mathbf{1 5}$ | $\mathbf{0 . 5}$ |
| :--- | :---: | :---: |
| Factory Default: 0.5 Hz | $\mathbf{0 . 5}$ |  |

APP-14 \& 15 set high and low limit value of PID controller's output.

App-17 [PID P2 Gain] sets PID controller's proportional gain 2 value.

## APP-18: P Gain Scale APP-19: PID Out Invrt

| $\begin{array}{lr} \text { APP } & \mathrm{P} \text { Gai } \\ 18 & 1 \end{array}$ | cale <br> $.0 \%$ | 18 | 100.0 |
| :---: | :---: | :---: | :---: |
| Factory Default: | 100.0\% |  | 100.0 |

APP-18[P GainScale] sets PID controller's conversion scale of proportional gain P and P 2 .

APP-19[PID Output Invert] sets PID controller's output Invert. 6-58

APP-20[PID U curve feedback select] converts sets PID controller's feedback to "U". (It is used when "square" operation as a proportional value of sensor feedback.)
This code is useful for fan and pumps application. It converts linear pattern of a feedback sensor to the squared pattern without any setting.
PID output value can be set to ' 0 ' by setting a Programmable digital input terminals (M1 ~ M8) to 'Open loop' in I/O- I/O-20 ~ I/O-27.

The accumulated value by I-Gain can be set to ' 0 ' by setting a Programmable digital input terminal (M1~ M8) to 'iTerm Clear' in I/O-20 ~ I/O-27.

The P-Gain 2 can be selected for PID controller by setting a Programmable digital input (I/O-20 ~ I/O-27) to 'PID P2'.

When APP-02 [PID operation selection] is set to "Yes," a desired display unit in I/O-86, -87, -88 [User Unit selection] is set among Speed, Percent, Bar, $\mathrm{mBar}, \mathrm{kPa}, \mathrm{Pa}$, which affects value display of APP06 [PID feedback selection], all the parameter unit related to inverter target frequency is changed.

PrePID is a function that activate before PID operation in order to run by good condition. For example, In Winder operation, this function make accel/decel speed operation before reach a certain speed of line speed.
APP-23 [PrePID Reference Frequency]
While select PrePID, it is a frequency that output until PrePID is completed by target frequency.

APP-24 [Pre PID Exit Level]
If the detected value like as pressure is capable to operate PID in PrePID operation, the PrePID operation is exit and start PID operation.

APP-25 [Pre PID Stop Delay]
After time that set in this code, if the detected value is under level than has set for PID operation, the system has a problem(Ex. The pipe Broken). So it must be set properly again.

APP-26 [Pipe Broken]
In case that the deteced value is under the APP-24 and maintained over the time setted in APP-25, the system show "Pipe Broken" concluding the pipe has a problem.

| APP-27: Sleep Delay Time APP-28: Sleep Frequency APP-29: Wake-Up Level |  |
| :---: | :---: |
| $\begin{array}{\|cc\|} \hline \text { APP } & \text { Sleep } \text { Delay } \\ 27 & 60.0 \mathrm{sec} \end{array}$ | 60.0 |
| Factory Default: 60.0 sec | 60.0 |
| APP Sleep Freq  <br> 28 0.00 Hz $\mathbf{2 8}$ | 0.00 |
| Factory Default: 0.00 Hz | 0.00 |
| $\begin{array}{\|cc\|} \hline \text { APP WakeUp level } \\ 29 & 2.0 \% \end{array} \quad \mathbf{2 !}$ | 2.0 |
| Factory Default: 2.0\% | 2.0 |

Sleep function is initiated when flow demand is low. Inverter stops motor when the motor runs below Sleep Frequency (APP-28) during Sleep Delay Time (APP-27). While in the sleep state, the drive keeps monitoring and controlling, and initiates the WakeUp function when the real value of the controlling amount is greatly different from the Wake-Up level (APP-29) based on Target Level.

Note: Sleep function is not operated if the Sleep Delay Time (APP-29) set to ' 0 '.

## APP-30~APP-39: $2^{\text {nd }}$ Functions

| APP $2^{\text {nd }}$ Acc time $30 \quad 5.0 \mathrm{sec}$ | 30 | 5.0 |
| :---: | :---: | :---: |
| Factory Default: 5.0 sec |  | 5.0 |
| APP $2^{\text {nd }}$ Dec time 31 10.0 sec | 31 | 10.0 |
| Factory Default: 10.0 sec |  | 10.0 |

These functions APP-30 ~ APP-39 are displayed only when one of the multifunction inputs in codes I/O-20 to I/O-27 is set at '2nd func'.
When an inverter is controlling two motors by exchanging, different values can be set for the $2^{\text {nd }}$ motor by using the multifunction input terminal. Following a cross reference table shows the $2^{\text {nd }}$ functions corresponding to the $1^{\text {st }}$ functions.

| Description | $1{ }^{\text {st }}$ Functions | $2{ }^{\text {nd }}$ Functions |
| :---: | :---: | :---: |
| Acceleration time | DRV-01 <br> [Acc. time] | APP-30 <br> [2nd Acc time] |
| Deceleration time | DRV-02 <br> [Dec. time] | APP-31 <br> [2nd Dec time] |
| Base Frequency | FU1-31 <br> [Base freq] | APP-32 <br> [2nd BaseFreq] |
| Volts/Hz mode | FU1-40 <br> [V/F Pattern] | APP-33 <br> [2nd V/F] |
| Forward torque boost | FU2-68 <br> [Fwd Boost] | APP-34 <br> [2nd F-boost] |
| Reverse torque boost | $\begin{aligned} & \text { FU2-69 } \\ & \text { [Rev Boost] } \end{aligned}$ | APP-35 <br> [2nd R-boost] |
| Stall prevention | FU1-60 | APP-36 |

| Description | $\mathbf{1}^{\text {st }}$ Functions | $\mathbf{2}^{\text {nd }}$ Functions |
| :--- | :--- | :--- |
| level | [Stall Level] | [2nd Stall] |
| ETH level for 1 <br> minute | FU1-61 <br> [ETH 1min] $]$ | APP-37 |
| [2nd ETH 1min] |  |  |
| ETH level for <br> continuous | FU1-62 <br> [ETH cont] | APP-38 <br> [2nd ETH cont] |
| Motor rated current | FU2-43 <br> [Rated-Curr] $]$ | APP-39 <br> [2nd R-Curr] |

The $1^{\text {st }}$ functions are applied if the assigned multifunction terminal is not defined as '2nd Func' nor ON. The $2^{\text {nd }}$ function parameters are applied when the multifunction input terminal set to '2nd Func' is ON. Parameters not listed on the table above are same as the $1^{\text {st }}$ function.

Caution: Exchange the motor connection from the $1^{\text {st }}$ motor to the $2^{\text {nd }}$ motor or the opposite when the motor is stopped. Over voltage or over current fault may occur when the motor is exchanged during operation.

Note: The 'User V/F' function of FU1-40 [V/F Pattern] is commonly used for the 1 st and the 2 nd motor.

## APP-40: Number of Running Aux. Motor Display

 APP-40~APP-72: MMC Operation Control| APPD Aux Mot Run <br> 40 | $\mathbf{4 0}$ | $\mathbf{0}$ |
| :--- | :---: | :---: | :---: |
| Factory Default: | 0 | $\mathbf{0}$ |

This code shows how many auxiliary motors are run by MMC control.
[MMC]: The 'PID' control should be selected in APP-02 to use this function.

- One inverter can control multiple motors. This function is often used when controlling the rate and pressure of flow in fans or pumps. Built-in PI controller controls a main motor after receiving process control feedback value and keeps the control value constant by connecting auxiliary motors to commercial line when needed.
- In case that flow rate or flow pressure is beyond or below the reference so the main motor cannot control by itself, auxiliary motors are automatically turned on/off. Maximum four (Aux.1-4 output) auxiliary
motors can be run. Each of Starting and Stop Frequency should be set for automatically running four auxiliary motors.
- Auto Change can be selected to automatically switch the order of the running motors for keeping motor run-time constant. Set mode ' 1 ' for automatic changing of auxiliary motors only and set mode ' 2 ' for automatic changing of all motors including main motor. For mode ' 2 ', external sequence should be configured.
- Abnormal motor can be skipped from running by using the Programmable digital input terminals (M1, M2, M3, and M4). If a Programmable digital terminal (M1, M2, M3 and M4) is opened, the inverter stops all running motors and restarts operation with only normal motors except the abnormal (Off) motor.
- Sleep function is initiated when flow demand is low. Inverter stops the motor when the motor runs below Sleep Frequency after Sleep Delay Time. While in the sleep state, inverter keeps monitoring and initiates Wake-Up function when the real value (feedback) of the controlling amount has decreased below the Wake-Up level.

Note: Only one auxiliary motor can be connected with AUX terminal on control terminal strip without using MMC Option Board.

[MMC Diagram]

APP-40 [Aux Mot Run] shows how many auxiliary motors are run by MMC control.
APP-41 [Starting Aux motor] defines the starting auxiliary motor for MMC control.
APP-42 [Auto Op Time] displays the operation time after Auto Change is accomplished.
APP-43 [Number of Aux] sets the number of auxiliary motors connected to the inverter. APP-44 [F-in L-out] defines the stop order of auxiliary motor.
If it is set to 'Yes', first started motor will be stop later (FILO: First Input Last Ouput). If it is set to
'No', first started motor will be stop first (First Input First Output).
For example, auxiliary motor is started in the order of
No. 1 motor $\rightarrow$ No. 2 motor $\rightarrow$ No. 3 motor $\rightarrow$ No. 4 motor,
If APP-44 is set to 'Yes', auxiliary motor will be stop in the order of No. 4 motor $\rightarrow$ No. 3 motor $\rightarrow$ No. 2 motor $\rightarrow$ No. 1 motor. If it is set to ' No ', the order is opposite No. 1 motor $\rightarrow$ No. 2 motor $\rightarrow$ No. 3 motor $\rightarrow$ No. 4 motor.

APP-45 [ALL Stop] defines the stop method of aux. motor when motor is stop.
If it is set to 'Yes', auxiliary motor will be stop simultaneously. If not, auxiliary motor will be stop respectively with the APP-44 set order. APP-47~50 [No.1~4 Aux motor starting frequency] sets the starting frequency of each auxiliary motor. Inverter output frequency will be increased continuously when the flow pressure or quantity is lower than the set level.

1) The operation speed of main motor become higher than the set value in APP-44~50,
2) The delay time set in APP-58 is elapsed,
3) The difference of pressure between command value and feedback is higher than APP-71,

That is, Auxiliary contact AUX1~4 will be turned On in this order with above 3 conditions.
APP-51~54 [No.1~4 Aux motor stop frequency] sets the stop frequency of each auxiliary motor. The speed of main motor will be decreased by builtin PID controller when flow pressure or quantity exceeds.

1) The operation frequency of main motor become lower than the set value in APP-51~54,
2) The delay time set in APP-59 is elapsed,
3) The difference of pressure is lower than APP-72, That is auxiliary contact AUX4~AUX1 will be turned Off in this order with 3 conditions. APP-58 [Aux.starting delay time], APP-59 [Aux. stop delay time] sets the time by 0.1 unit the inverter waits before starting (stop) the auxiliary motors.

## APP-41: Starting Auxiliary Motor Selection

This code defines the starting auxiliary motor for MMC control.

APP-42: Operation Time Display on Auto Change

| APP Auto Op Time <br> 42 $\mathbf{4 2}$ $\mathbf{0 0 : 0 0}$ <br> Factory Default: $00: 00$ $\mathbf{0 0 : 0 0}$  |
| :--- | :---: | :---: |

This code displays the operation time after Auto Change is accomplished.

## APP-43: The Number of Aux. Motors

| APP Nbr Aux's <br> 43 | $\mathbf{4 3}$ | $\mathbf{4}$ |
| :--- | :---: | :---: |
| Factory Default: 4 |  | $\mathbf{4}$ |

Sets the number of auxiliary motors connected to the inverter

## APP-47~50: Start Frequency of Aux. Motor 1~4

| APP Start Freq 1 <br> 47 49.99 Hz | 47 | 49.99 |
| :---: | :---: | :---: |
| Factory Default: 49.99 | Hz | 49.99 |
| $\begin{array}{\|cc} \text { APP } & \text { Start freq4 } \\ 50 & 49.99 \mathrm{~Hz} \end{array}$ | 50 | 49.99 |
| Factory Default: 49.99 | Hz | 49.99 |

The inverter turns on AUX1, AUX2, AUX3, and AUX4 if the output frequency is over the frequencies set in APP-47 to APP-50, respectively, the time is over APP-58 and pressure difference between reference and feedback value exceeds the value set in APP-71 [Actual Pr Diff].

## APP-51~54: Stop Frequency of Aux. Motor 1~4

|  | $\begin{aligned} & \text { op freq1 } \\ & 20.00 \mathrm{~Hz} \end{aligned}$ | 51 | 20.00 |
| :---: | :---: | :---: | :---: |
| Fact | fault: 20.00 |  | 20.00 |

The inverter turns off AUX4, AUX3, AUX2 and AUX1 in this order if the output frequency is below the frequencies set in APP-51 to APP-54, respectively, the time is over APP-59 and the pressure difference between reference and feedback value decreases below the set value set in APP-71 [Actual Pr Diff].

APP-58: Delay Time before Starting Aux. Motor APP-59: Delay Time before Stopping Aux. Motor APP-60, 61: Accel/Decel time when the number of pumps is increasing/decreasing

| APP Aux Start DT <br> 58 <br> 5.0 sec $\mathbf{5 8}$ $\mathbf{5 . 0}$ |  |
| :--- | :---: | :---: |
| Factory Default: 5.0 sec | $\mathbf{5 . 0}$ |

Sets the time the inverter waits before starting the auxiliary motors.

Sets the time the inverter waits for the input before stopping the auxiliary motors.

APP-58 and APP-59 sets the acceleration/ deceleration time of the Main motor by 0.1 sec when more/less aux motors are connected.

## APP-62: PID Bypass Selection

| APP Regul Bypass <br> 62 | $\mathbf{6 2}$ | $\mathbf{0}$ |
| :--- | :---: | :---: |
| No |  |  |$\quad$| Factory Default: | No |
| :---: | :---: |

This is used to bypass the PID operation selected in APP-02. Select this code to 'Yes' when using MMC function without PID control. The frequency is determined by actual value (feedback) of control amount instead of PID controller output. The actual value is also used as the Start/Stop reference of Aux. motors.
The following figure shows the running pattern with this function applied for controlling the flow rate of a tank. To control the flow rate proportional to the water level of a tank, divide the water level in the tank into the region for the number of Aux. motors plus one, and map each region by staring frequency to maximum frequency. The inverter increases output frequency to lower the water level in the tank when the water level in the tank rises. When reaching maximum frequency, inverter connects aux. motors connected directly to commercial line. After connecting aux. motor, inverter starts again from the starting frequency. By selecting APP-61 [Regul Bypass] to 'Yes', PID operation is disabled and Control Mode is changed to 'V/F'. PID Bypass is available only when DRV-04 [Freq. Mode] is set to 'V1', 'I' or 'Pulse'.

## To use MMC operation

## A. Set MMC in APP-01

## B. Set Process PI to Yes in APP-02

C. Set Pre PID operation enable/disable
a. Used for trial operation to check such as pipe
damage before operation.
b. Used to know the starting set point before PID operation
D. Set PID target value input method in APP-04
a. Keypad, V1, I ...
b. Set target value
E. Set PID Feedback input method in APP-06
a. Set according to sensor used.
b. Analog input ( $4 \sim 20 \mathrm{~mA}, 0 \sim 10 \mathrm{~V} \ldots$ )
c. Check whether the setting performs well. i. Pre-operation is needed.
ii. Checks whether output to feedback value is generated.
F. Set Multi-motor driving sequence in APP-66
a. Mode 0,1: Main motor and Aux motor used i. Available motor: Main motor $1+$ Aux motor 4 ( +3 when Option is used)
b. Mode 2: Aux motor used ii. Available motor: Aux motor 4 ( +3 when Option is used)
G. Set the number of Aux motor in APP-43
H. Set the starting Aux motor in APP-41
I. Set the start freq of Aux motor in APP-44~50
J. Set the stop freq of Aux motor in APP-51~57
K. Start operation.

## Detailed MMC function setting

A. Energy-saving under light load

- Sleep, Wake up
B. To easily and effectively use Process PID operation
- Pre PID
C. To divide the load to the motor equally
- Auto Change
D. To associate other conditions with Aux motor operation
- INTERLOCK
E. Adjusting Aux motor ON/OFF condition and output (pressure, air/wind volume) variation F. To change response characteristics $\rightarrow$ It is related to PID control. Refer to Process PID description.

## APP-66: Auto Change Mode Selection

| APP AutoCh_Mode <br> 66 | $\mathbf{6 6}$ | $\mathbf{0}$ |
| :--- | :---: | :---: |
| Factory Default: 0 |  | $\mathbf{0}$ |

This function is used to change the running order of the motors to regulate their run-time when multiple motors are connected for MMC.

EXCH_NONE mode: Not using Auto Change Function
The inverter is driving the main motor, and tuning the relays ON to connect Aux motors. For example, starting from the Aux motor 3, inverter turns the relays ON from RLY3 $\Rightarrow$ RLY4 $\Rightarrow$ RLY1 $\Rightarrow$ RLY2 and inverter will start the switching operation if inverter is run operation. If the number of pump is decreased, it turns off the aux motors oppositely from RLY2 $\Rightarrow$ RLY1 $\Rightarrow$ RLY4 $\Rightarrow$ RLY3.

AUX_EXCH mode: Auto Change Function is applied only to aux. motors.
On/Off sequence is the same as EXCH_NONE mode. However, the difference is that starting Aux motor is fixed in EXCH_NONE mode but it is automatically changed by inverter in AUX_EXCH mode to prevent a specific motor from overusing. For example, when Aux motors running order is RLY1 $\Rightarrow$ RLY2 $\Rightarrow$ RLY3 $\Rightarrow$ RLY4 and then the Auto change condition is met, inverter turns the relay On from RLY 2 $\Rightarrow$ RLY3 $\Rightarrow$ RLY4 $\Rightarrow$ RLY1. Caution: EXCH_NONE, AUX_EXCH mode are available when a Main motor is directly connected to the Inverter.

MAIN_EXCH mode: Auto Change of Main/Aux motors.
All motors are connected to relays and operated via relays. The operation procedure is the same as AUX_EXCH mode, except that there is no main motor directly connected to Inverter.

APP-67: Auto Change Time APP-68: Auto Change Level

| $\begin{array}{\|cc\|} \hline \text { APP AutoEx-intv } \\ 67 & 72: 00 \end{array}$ | 67 | 72:00 |
| :---: | :---: | :---: |
| Factory Default: 72:00 |  | 72:00 |
| $\begin{array}{\|lr} \hline \text { APP AutoEx-Freq } \\ 68 & 20.00 \mathrm{~Hz} \\ \hline \end{array}$ | 68 | 20.00 |
| Factory Default: 20.00 |  | 20.00 |

This function is used to protect motor from running alone for a long time by changing operation to other motor.
Auto Change is accomplished when the following conditions are satisfied:

1) The time set in APP-67 is over and it is

AUX_EXCH mode.
2) The actual value of controlling amount is less than the value set in APP-68 and all Aux motors Off. (in AUX_EXCH mode)
3) One motor is running (in MAIN_EXCH mode).

When above three conditions are met, the inverter stops the running motor, and changes motor to run by the order set in APP-66 and then continues operation according to new order. Inverter starts counting only when auxiliary motor is running.

In MAIN_EXCH mode, when inverter output frequency is below Auto Change Level, inverter automatically stops the motor and perform Auto change function and operates next motor.

APP-69: Interlock Selection

When APP-69 [Interlock selection] is set to "Yes", M1~M4 can be used as the same activating condition for AX1~AX4. Programmable digital input terminals are activated when turned ON. If one of them are turned Off, all motors will start running except the motor connected to the off terminal. If the input signal is turned off in the midst of running, inverter stops all the motors and restarts the operation with normal active motors.

## Interlock during Stop

When Run signal is input during Stop, MMC operation is started with the Aux motors(Relays) turned ON.

Ex) When Interlock is not selected:

## RLY1 $\rightarrow$ RLY $\boldsymbol{\rightarrow} \rightarrow$ RLY3 $\rightarrow$ RLY4

When Interlock is active (the terminal defined as Interlock/RLY2 is turned Off):

## RLY1 $\rightarrow$ RLY3 $\rightarrow$ RLY4

## Interlock during RUN

When Interlock is active during RUN (the terminal defined as interlock/RLY is turned Off during RUN), inverter stops all motors and restart MMC operation with aux motors except the interlocked one(terminal turned Off).

Ex)Normal operation:

## RLY1 $\rightarrow$ RLY2 $\rightarrow$ RLY3 $\rightarrow$ RLY4

When Interlock is active (the terminal defined as Interlock/RLY3 is turned OFF), all Aux motors are turned Off and stopped. MMC operation is restarted except Aux motor 3 (RLY 3 Off).
Aux motors start rotating in the order of
RLY1 $\rightarrow$ RLY2 $\rightarrow$ RLY4.

Please refer to the wiring example below when Interlock is used during Auto change MAIN_EXCH mode.

[Wiring Diagram for Inter-Lock Configuration]

[Sequence Circuit for Inter-Lock Configuration]

## Aux motor starting condition and output <br> (Pressure, air volume..) adjustment

Inverter turns Aux motors ON automatically when it is impossible for a main motor to control increased load, causing shortage in flow rate or flow pressure. Maximum 4 Aux motors can be used. To turn on the 4 Aux motors automatically, starting frequency for each motor should be set.

| Code | LCD Display | Description | Factory <br> Defualt | Setting <br> Range |
| :--- | :--- | :--- | :--- | :--- |
| APP- <br> $47 \sim 50$ | Start freq <br> $1 \sim 4$ | Starting freq. <br> of No.1~4 <br> Aux. motor | 49.99 <br> Hz | $0-$ <br> Max <br> Freq. |
| APP-58 | Aux start <br> DT | Stop delay <br> time of Aux. <br> motor | 5.0 sec | $0-$ <br> 999.9 <br> sec |
| APP-61 | Pid Dec <br> Time | Dec time <br> when <br> number of <br> pump is <br> increased. | 2.0 sec | $0-$ <br> 600.0 <br> sec |
| APP-71 | Aux Stt <br> Diff | Differenceof <br> starting <br> pressure of <br> Aux motor | $2 \%$ | $0-$ <br> $100 \%$ |

Aux motor active condition: Main motor speed exceeds Aux motor starting frequency (APP-47~50), for the time over APP-58[Aux motor starting delay time], Difference between PID reference and Feedback value exceeds APP-71 [Starting Aux motor pressure difference].

APP-47~50: Frequency to turn Aux motor ON. It is set the same as main motor frequency outputting equally when aux motor is turned ON.

APP-58: It should be set greater than system delay time.

APP-71: It is set by comparing the pressure difference when Aux motor is turned ON and that of Aux motor starting frequency.

APP-61: This is the time inverter frequency is decreased after Aux motor is turned ON. It should be set higher than System delay time but it causes Aux motor ON state to become too long.

## Aux motor stopping condition and output

 (Pressure, air volume..) adjustmentInverter turns off the Aux motors when flow rate or flow pressure is too large due to decreased load. For Inverter to turn off Max 4 Aux motors automatically, 4 stopping frequency should be set separately.

Aux motors are opened when main motor rotates below APP-51~54 [Aux motor stopping frequency] for the time over APP-59 [Aux motor stopping delay time] and pressure difference between PID reference and Feedback value exceeds the set value in APP71[Aux motor starting /stopping pressure difference].

APP-51~57: The Aux motors are turned off at this frequency. It is set as dF , whose output matches when Aux motor is off.
(dF = Aux motor On Freq - Aux motor Off Freq)

APP-59: It should be set higher than System Delay Time.

APP-60: This is the time inverter frequency is increased after Aux motor is turned OFF. It should be set higher than System delay time but it causes Aux motor OFF state to become too long.

APP-71: Pressure Difference for Aux Motor Start
APP-72: Pressure Difference for Aux Motor Stop

It sets the pressure difference between when Aux motors are ON and Aux motor starting frequency.

## APP-80~97: External PID operation

| $\begin{array}{\|lc} \hline \text { APP Ext Ref Sel } \\ 81 & \text { KeyPad } \end{array}$ | 81 | 3 |
| :---: | :---: | :---: |

| Factory Default: 50.00\% |  | 50.00 |

| Code | LCD Display | Default | Range |
| :---: | :---: | :---: | :---: |
| APP-80 | Ext PI mode | 0 (No) | $\begin{array}{ll} \hline 0 & \text { (No) } \\ 1 & \text { (Yes) } \end{array}$ |
| APP-81 | Ext Ref Sel | 3 (Key-Pad) | $\begin{array}{\|ll\|} \hline 0 & \text { (I) } \\ 1 & \text { (V1) } \\ 2 & \text { (Pulse) } \\ 3 & \text { (Key-Pad) } \\ \hline \end{array}$ |
| APP-82 | Ext Ref Perc | 50.00 [\%] | 0-100.00 [\%] |
| APP-83 | Ext Fbk Sel | 0 (I) | $\begin{array}{\|ll} \hline 0 & \text { (I) } \\ 1 & \text { (V1) } \\ 2 & \text { (Pulse) } \\ \hline \end{array}$ |
| APP-85 | ExtPID Pgain | 1.0 [\%] | 0-999.9 [\%] |
| APP-86 | ExtPID Itime | 10.0 [sec] | $0-32.0$ [sec] |
| APP-87 | ExtPID Dtime | 0 [msec] | $0-2000[\mathrm{msec}]$ |

| Code | LCD Display | Default | Range |
| :---: | :---: | :---: | :---: |
| APP-88 | ExtPID lmt-H | $100.00[\%]$ | $0-100.00$ [\%] |
| APP-89 | ExtPID lmt-L | $0.00[\%]$ | $0-30.00[\%]$ |
| APP-90 | ExtPID Scale | $100.0[\%]$ | $0-999.9$ |
| APP-91 | Ext P2-gain | $100.0[\%]$ | $0-999.9$ |
| APP-92 | Ext P Scale | $100.0[\%]$ | $0-100.0$ |
| APP-93 | ExtPID F-gain | $0.0[\%]$ | $0-999.9[\%]$ |
| APP-95 | ExtPIDOut Inv | 0 (No) | 0 <br> 1 (No) |
| (Yes) |  |  |  |

APP-80~96 setting value is the same as APP-02~17.
APP - 82 [Ext PID Ref value] is settable when APP81 [Ext PID Ref selection] is set to "Keypad".

APP-97 [Ext PID Loop Time] sets the time to activate Ext PID controller. Set the desired value according to system.

Ext PID can be used for (1) controlling other system independently as an external PID controller (2)using both PID controller in APP-02 and External PID controller (3)using Ext PID output as an Inverter target frequency. See 10) APP-02, APP-80 (to use Dual PID operation) for more details.

[Ext. PID internal block diagram]

## APP-02, APP-80 (to use Dual PID operation)

ExtPID can be used in the following three cases; (1) controlling other system independently like an external PID controller (2) using both PID controller in APP-02 and External PID controller (3)using ExtPID output as an Inverter target frequency.
[Dual PID block diagram for case (1]]

This illustrates controlling other system independently. Set I/O-70 or 72 [S0/S1 mode] to "Ext PID Out" and connect external system to S 0 or S 1 terminal. When Ext.PID Run signal is ON at the defined terminal in I/O$20 \sim 27$, it starts output.
[Dual PID block diagram for case (2)]

This illustrates dual use of PID controller (APP-02) and External PID controller. Set APP-81 [Ext. Ref Sel] to Analog Input (V1, I, or Pulse) and perform terminal wiring for analog input. To give the digital reference, set APP-81 [Ext. Ref Sel] to "Keypad" and set proper value in APP-82 [Ext. Ref Perc]. Set the Ext. PID Feedback among V1, I, Pulse in APP-83 and perform terminal wiring for analog input. External PID Ref. and feedback are connected to PID controller. When Ext.PID Run signal is ON to the defined terminal in I/O-20~27, it starts its output. $\mathrm{S} 0 / \mathrm{S} 1$ terminal can be used to connect to other system.
[Dual PID block diagram for case (3)]

ExtPID output can be used for inverter target frequency. To activate this function, set analog input (V1, I, Pulse) as a reference value to other system or set APP-81 [Ext. Ref Sel] to "Keypad" and set proper value in APP-82 [Ext. Ref Perc]. Set APP-83 [Ext. Fbk Sel] to Analog input (I, V1, Pulse) and conduct wiring. And set DRV-04 [Freq Mode] to "Ext. PID", then ExtPID output functions as Inverter main speed reference (target frequency). When Ext.PID Run signal is ON in the defined terminal in I/O-20~27, it starts its output and inverter performs Accel/Decel with output frequency. Other system can be connected via $\mathrm{S} 0 / \mathrm{S} 1$ terminal.
$\square$ Notes:

### 7.1 Fault Display

When a fault occurs, the inverter turns off its output and displays the fault status in DRV-12. The last 5 faults are saved in FU2-01 through FU2-05 with the operation status at the instance of fault. Reset the inverter when a fault occures.

| Keypad Display | $\begin{array}{c}\text { Protective } \\ \text { Function }\end{array}$ | Description |
| :---: | :---: | :--- |
| $\begin{array}{c}\text { Over Current } \\ \text { Over Current 1 }\end{array}$ | $\begin{array}{c}\text { Over Current } \\ \text { Protection }\end{array}$ | $\begin{array}{l}\text { The inverter turns off its output when the output current of the inverter flows more } \\ \text { than 200\% of the inverter rated current. This may cause danger or damage the } \\ \text { drive so it requires double protection. }\end{array}$ |
| Ground Fault | $\begin{array}{c}\text { Ground Fault } \\ \text { Protection }\end{array}$ | $\begin{array}{l}\text { The inverter turns off its output when a ground fault occurs and the ground fault } \\ \text { current is more than the internal setting value of the inverter. motor. If the motor is overloaded the inverter turns off the output. The inverter <br>
cannot protect the motor when driving a multi-pole motor or when driving <br>

multiple motors, so consider thermal relays or other thermal protective devices for\end{array}\right\}\)| each motor. |
| :--- |
| Overload capacity: 130\% for 1 min |

Chapter 7-Troubleshooting \& Maintenance

| Keypad Display | Protective Function | Description |
| :---: | :---: | :---: |
| $\begin{gathered} \text { LOP } \\ \text { LOR } \\ \text { LOV } \\ \text { LOI } \\ \text { LOX } \end{gathered}$ | Operating Method when the Frequency Reference is Lost | According to the I/O-48 [Operating Method when the Frequency Reference is Lost] setting, there are three modes: continuous operation, decelerate to stop, and free run to stop, <br> LOP: Displayed when option frequency reference is lost (DPRAM time out) LOR: Displayed when option frequency reference is lost (Communication network fault) <br> LOV: Displayed when 'V1' analog frequency reference is lost. <br> LOI: Displayed when ' $I$ ' analog frequency reference is lost. <br> LOX: Displayed when sub-board (V2, ENC) analog frequency reference is lost. |
| Lost cmd |  | This fault is diaplayed when I/O 18 sets to Protection. |
| Fuse Open | Fuse Open | This fault is displayed when inverter internal fuse is opened by over current. (applied above 37 kW products) |
| Output Fault Trip | No Motor Trip | Trip has occurred according to setting of FU1 57~59. |
| Keypad Open | Keypad FLT | Indicats wire is separated from keypad. It is displayed only DRV-23 set to Fault. |

To reset fault, Press RESET key, close RST-CM terminals or cycle the input power. If a problem persists, please contact the factory or your local distributor.

## Operation methods and fault display in case of frequency loss

- I/O-18 <Lost Command> is as below description

| I/O-18 set data | Description |
| :---: | :--- |
| None | Keep the operation because frequency command is lost. <br> (Factory default) |
| FreeRun | Free Run to stop because frequency command is lost. |
| Stop | Deceleration to stop because frequency command is lost. |
| Protection | Lost Cmd Trip because frequency command is lost. |

- Load display when command is lost

| LCD display | Description |
| :---: | :--- |
| LOP | Displayed when option command is lost (DPRAM Time out) |
| LOR | Displayed when option command is lost <br> (Abnormal communication network) |
| LOV | Displayed when V1 analog frequency command is lost. |
| LOI | Displayed when I analog frequency command is lost. |
| LOX | Displayed when sub board (V2, ENC) frequency is lost. |

If you want to check the previous state of inverter trip occurred and inverter trip description,

- Current faulty description

| Code | Display |  |
| :---: | :---: | :--- |
| DRV-7 | Over Current | Displayed the current trip message. (Over current) |

Use the PROG, $\boldsymbol{\Delta}$ and $\boldsymbol{\nabla}$ key before pressing the RESET key to check the fault content(s) such as output frequency, output current, and whether the inverter was accelerating, decelerating, or in constant speed at the time of the fault occurred. Press the ENT key to escape.
Press the RESET key to save the trip history in FU2-01~05.

- Last fault history
- This code displays up to five previous fault (trip) status of the inverter. The lowest numbered fault such as "Last trip 1" is the most recent. Previous state of inverter trip occurred and inverter trip description can be checked.
- FU2-06 [Erase trips] initializes the FU2-01~05 [Last trip-x]. It becomes the value of factory default.

| Code | LCD display |  |
| :---: | :--- | :--- |
| FU2-01 | Last trip-1 | Trip history 1 |
| FU2-02 | Last trip-2 | Trip history 2 |
| FU2-03 | Last trip-3 | Trip history 3 |
| FU2-04 | Last trip-4 | Trip history 4 |
| FU2-05 | Last trip-5 | Trip history 5 |

## Reset the trip (Abnormal inverter state)

There are 3 kinds of reset methods. Auto restart number is initialized after reset the inverter.

1. Reset by [RESET] key in loader.
2. Cut off the RST-CM of terminal block of inverter control circuit.
3. Turn off the inverter power and turn on the inverter.

| Protection <br> furnction | LCD display | Description |
| :--- | :--- | :--- |
| Over Current 1 <br> Protection | Over Current <br> Over Current1 | Inverter output cuts off when the inverter output exceeds 200\% of <br> th rated current. 소손의 위 함이 있는 만큼 이중 보호 합니다. |
| Ground Fault <br> Current Protection | Ground Fault | Inverter output cuts off when current above the prescribed amount <br> flows due to earth in the inverter outputu part. Ground fault due to <br> low ground resistor can be protective by over current trip. |
| Over Voltage <br> Protection | Over Voltage | Inverter output cutss off when the DC current above the prescribed <br> amount flows due to deceleration or regenerative energy. It can be <br> occurred due to surge voltage from power system. |

Fault Remedy

| Protective Function | Cause | Remedy |
| :---: | :---: | :---: |
| Over Current Protection 1 | 1)Acceleration/Deceleration time is too short compared to the $\mathrm{GD}^{2}$ of the load. <br> 2) Load is larger than the inverter rating. <br> 3) Inverter turns output on when the motor is free running. <br> 4) Output short or ground fault has occurred. <br> 5) Mechanical brake of the motor is operating too fast. <br> 6) Components of the main circuit have overheated due to a faulty cooling fan. | 1) Increase Accel/Decel time. <br> 2) Increase inverter capacity. <br> 3) Operate after motor has stopped. <br> 4) Check output wiring. <br> 5) Check mechanical brake operation. <br> 6) Check cooling fan. <br> (Caution) Operating inverter prior to correcting fault may damage the IGBT. |
| Ground Fault Current Protection | 1) Ground fault has occurred at the output wiring of inverter. <br> 2) The insulation of the motor is damaged due to heat. | 1) Investigate the output wiring of inverter. <br> 2) Exchange motor. |
| Over Voltage Protection | 1) Acceleration time is too short compared to the $\mathrm{GD}^{2}$ of load. <br> 2) Regenerative load at the output <br> 3) Line voltage is high. | 1) Increase deceleration time. <br> 2) Use regenerative resistor option. <br> 3) Check line voltage. |
| Current Limit <br> Protection <br> (Overload <br> Protection) | 1) Load is larger than the inverter rating. <br> 2) Incorrect inverter capacity selected. <br> 3) Set incorrect V/F pattern. | 1) Increase capacity of motor and inverter. <br> 2) Select correct inverter capacity. <br> 3) Select correct V/F pattern. |
| Inverter <br> Overheat | 1) Cooling fan damaged or an alien substance inserted. <br> 2) Cooling system has faults. <br> 3) Ambient temperature high. | 1) Exchange cooling fans and/or eliminate alien substance. <br> 2) Check for alien substances in the heat sink. <br> 3) Keep ambient temperature under $40{ }^{\circ} \mathrm{C}$. |
| Electronic <br> Thermal | 1) Motor has overheated. <br> 2) Load is larger than inverter rating. <br> 3) ETH level too low. <br> 4) Incorrect inverter capacity selected. <br> 5) Set incorrect V/F pattern. <br> 6) Operated too long at low speeds. | 1) Reduce load and/or running duty. <br> 2) Increase inverter capacity. <br> 3) Adjust ETH level to an appropriate level. <br> 4) Select correct inverter capacity. <br> 5) Select correct V/F pattern. <br> 6) Install a cooling fan with a separate power supply. |
| External Trip | External Trip has occurred. | Eliminate Trip at circuit connected to external trip terminal or remove external trip input. |
| Low Voltage Protection | 1) Line voltage low. <br> 2) Load larger than line capacity is connected to line. (welding machine, motor with high starting current connected to the commercial line) <br> 3) Faulty magnetic switch at the input side of the inverter | 1) Check line voltage. <br> 2) Increase line capacity. <br> 3) Exchange magnetic switch. |
| Over Current 2 | 1) Short has occurred between the upper and lower IGBT. <br> 2) Short has occurred at the output of the inverter. <br> 3)Acceleration/Deceleration time is too short compared to the $\mathrm{GD}^{2}$ of load. | 1) Check IGBT. <br> 2) Check output wiring of inverter. <br> 3) Increase acceleration time. |
| Output Phase Open | 1) Faulty contact of magnetic switch at output <br> 2) Faulty output wiring | 1) Check magnetic switch at output of inverter. <br> 2) Check output wiring. |
| H/W Fault | 1) Wdog error (CPU fault) <br> 2) EEP error (memory fault) <br> 3) ADC Offset (current feedback circuit fault) | 1) Exchange inverter. <br> 2) Check the input power wiring. |
| Communication Fault | 1) Faulty connection between inverter and keypad 2) Inverter CPU malfunction | 1) Check connector. <br> 2) Exchange inverter. |
| Operating Method when the Speed | LOP (Loss of reference from the Option), LOR (Remote) LOV (V1), | Eliminate cause of fault. |

Chapter 7-Troubleshooting \& Maintenance

| Protective <br> Function | Cause | Remedy |
| :---: | :--- | :--- |
| Reference is <br> Lost | LOI (I), <br> LOX (Sub-V2, ENC) |  |
| Inverter <br> Overload | 1) Load is larger than inverter rating. <br> 2) Incorrect inverter capacity selected. | 1) Increase motor and/or inverter capacity. <br> 2) Select correct inverter capacity. |

### 7.2 Troubleshooting

| Condition | Checking Point |
| :---: | :---: |
| The Motor Does Not Rotate. | 1) Main circuit inspection: <br> - Is the input (line) voltage normal? (Is the LED in the inverter is lit?) <br> - Is the motor connected correctly? <br> 2) Input signal inspection: <br> - Check the operating signal input to the inverter. <br> - Check the forward and the reverse signal input simultaneously to the inverter? <br> - Check the command frequency signal input to the inverter. <br> 3) Parameter setting inspection: <br> - Is the reverse prevention (FU1-01) function set? <br> - Is the Drive mode (DRV-03) set correctly? <br> - Is the command frequency set to 0 ? <br> 4) Load inspection: <br> - Is the load too large or is the motor jammed? (Mechanical brake) <br> 5) Other: <br> - Is the alarm displayed on the keypad or is the alarm LED lit? (STOP LED blinks) |
| The Motor Rotates in Opposite Directions. | - Is the phase sequence of the output terminal $\mathrm{U}, \mathrm{V}, \mathrm{W}$ correct? <br> - Is the starting signal (forward/reverse) connected correctly? |
| The Difference Between the Rotating Speed and the Reference is Too Large. | - Is the frequency reference signal correct? (Check the level of the input signal) <br> - Is the following parameter setting is correct? <br> - Lower Limit Frequency (FU1-34), Upper Limit Frequency (FU1-35), Analog <br> Frequency Gain (I/O-1~10) <br> - Is the input signal line influenced by external noise? (Use a shielded wire) |
| The Inverter Does Not Accelerate or Decelerate Smoothly. | - Is the acceleration/deceleration time is set too short a period of time? <br> - Is the load too large? <br> - Is the Torque Boost (FU2-68, 69) value is too high that the current limit function and the stall prevention function do not operate? |
| The Motor Current is Too High. | - Is the load too large? <br> - Is the Torque Boost Value (manual) too high? |
| The Rotating Speed Does Not Increase. | - Is the Upper Limit Frequency (FU1-35) value correct? <br> - Is the load too large? <br> - Is the Torque Boost (FU1-68, 69) value too high that the stall prevention function (FU1-71) does not operate? |
| The Rotating Speed Oscillates When the Inverter is Operating. | 1) Load inspection: <br> - Is the load oscillating? <br> 2) Input signal inspection: <br> - Is the frequency reference signal oscillating? <br> 3) Other: <br> - Is the wiring too long when the inverter is using V/F control? (over 500 m ) |

### 7.3 How to Check Power Components

1) Diode module and IGBT module check $(5.5 \sim 30 \mathrm{~kW})$

Before checking the power components, be sure to disconnect AC Input supply and wait until the Main Electrolytic Capacitors (DCP-DCN) is discharged.

- Turn the power off and disconnect RST/UVW wiring.
- Determine whether inverter terminals (R,S,T, U, V, W, P1 (or P2),N) are energized or not using a tester.
- Wait until the Main Electrolytic Capacitors (DCP-DCN) is discharged to a safe level.
- Enormous amount of value such as Mega will be displayed when Open. When closed, the resistance value ranges from a few ohms to tens of $\Omega$. Sometimes, it seems to be closed due to electrolytic capacitors but soon to be displayed mega value resistance.
- The displayed value is not always the same according to modules and tester types but should be similar.
- Modules number and checking point

| Module |  | Test polarity |  | Check <br> value | Number | Test polarity |  | Check <br> value |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | + | - |  |  | + | - |  |
| Diode | D1 | R | DCP+ | Closed | D4 | R | N | Open |
|  |  | DCP+ | R | Open |  | N | R | Closed |
|  | D2 | S | DCP+ | Closed | D5 | S | N | Open |
|  |  | DCP+ | S | Open |  | N | S | Closed |
|  | D3 | T | DCP+ | Closed | D6 | T | N | Open |
|  |  | DCP+ | T | Open |  | N | T | Closed |
| IGBT | Tr1 | U | DCP | Closed | Tr4 | U | N | Open |
|  |  | DCP | U | Open |  | N | U | Closed |
|  | Tr3 | V | DCP | Closed | Tr6 | V | N | Open |
|  |  | DCP | V | Open |  | N | V | Closed |
|  | Tr5 | W | DCP | Closed | Tr2 | W | N | Open |
|  |  | DCP | W | Open |  | N | W | Closed |

2) Diode module and IGBT module check ( $37 \sim 90 \mathrm{~kW}$ )

- Turn the power off and disconnect RST/UVW wiring.
- Determine whether inverter terminals (R,S,T, U, V, W, P1 (or P2),N) are energized or not using a tester.
- Wait until the Main Electrolytic Capacitors (DCP-DCN) is discharged to a safe level.
- Enormous amount of value such as Mega will be displayed when Open. When closed, the resistance value ranges from a few ohms to tens of $\Omega$. Sometimes, it seems to be closed due to electrolytic capacitors but soon to be displayed mega value resistance.
- The displayed value is not always the same according to modules and tester types but should be similar.
- Modules number and checking point

| Module |  | Test polarity |  | Check <br> value | Number | Test polarity |  | Check <br> value |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | + | - |  |  | + | - |  |
| Diode | D1 | R | DCP+ | Closed | D4 | R | N | Open |
|  |  | DCP+ | R | Open |  | N | R | Closed |
|  | D5 | S | N | Open | D6 | T | N | Open |
|  |  | N | S | Closed |  | N | T | Closed |
| IGBT | Tr1 | U | DCP | Closed | Tr4 | U | N | Open |
|  |  | DCP | U | Open |  | N | U | Closed |
|  | Tr3 | V | DCP | Closed | Tr6 | V | N | Open |
|  |  | DCP | V | Open |  | N | V | Closed |
|  | Tr5 | W | DCP | Closed | Tr2 | W | N | Open |
|  |  | DCP | W | Open |  | N | W | Closed |

### 7.4 Maintenance

The iP5A series is an industrial electronic product with advanced semiconductor elements. However, temperature, humidity, vibration and aging parts may still affect it. To avoid this, it is recommended to perform routine inspections.

### 7.4.1 Precautions

Be sure to remove the drive power input while performing maintenance.
Be sure to perform maintenance only after checking that the bus has discharged (The voltage between terminal P1-N (or P2-N) should be less than DC 30V). The bus capacitors in the electronic circuit can still be charged even after the power is turned off.
The correct output voltage can only be measured by using a rectifier voltage meter. Other voltage meters, including digital voltage meters, are likely to display incorrect values caused by the high frequency PWM output voltage of the drive.

### 7.4.2 Routine Inspection

Be sure to check the following before operation:
The conditions of the installation location
The conditions of the drive cooling
Abnormal vibration or loud noise
Abnormal heating or discoloration

### 7.4.3 Periodic Inspection

Are there any loose bolt, nut or rust caused by surrounding conditions? If so, tighten them up or replace them.
Are there any deposits inside the drive-cooling fan? If so, remove using air gun.
Are there any deposits on the drive's PCB (Printed Circuit Boards)? If so, remove using air.
Are there any abnormalities in the various connectors of the drive's PCB? If so, check the condition of the connector in question.
Check the rotating condition of the cooling fan, the size and condition of the capacitors and the connections with the magnetic contactor. Replace them if there are any abnormalities.

### 7.4.4 Megger/Withstanding Voltage Test

Perform megger test after inverter wiring is disconnected. Test voltage should not be applied to the inverter.
Megger test should be conducted only for the main circuit, not the control circuit. Use DC 500 V megger.
Dielectric test should not be conducted to the inverter. Otherwise, IGBT may be damaged.

## 7．4．5 Daily and Periodic Inspection Items

|  | 皆 | Inspection | Period |  |  | Inspection Method | Criterion | Measuring Instrument |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | 立 | 筑 |  |  |  |  |
| All | Ambient Environ－ ment | Is there any dust？ <br> Is the ambient temperature and humidity adequate？ | O |  |  | Refer to the precautions． | Temperature： $-10 \sim+40$ no freezing． Humidity：Under $50 \%$ no dew | Thermometer， Hygrometer， Recorder |
|  | Equipment | Is there any abnormal oscillation or noise？ | O |  |  | Use sight and hearing． | No abnormality |  |
|  | Input Voltage | Is the input voltage of the main circuit normal？ | O |  |  | Measure the voltage between the terminals R，S，T． |  | Digital Multi－ <br> Meter／Tester |
| $\begin{aligned} & \text { E } \\ & \text { 券 } \\ & \text { 雨 } \end{aligned}$ | All | 1）Megger check（between the main circuit and the ground） <br> 2）Are any fixed parts removed？ <br> 3）Are there any traces of overheating at each component＇s cleaning？ |  | $\begin{aligned} & \mathrm{O} \\ & \\ & \mathrm{O} \\ & \mathrm{O} \end{aligned}$ | O | 1）Undo the inverter connections short the terminals R，S，T，U，V， W and measure between these parts and the ground． <br> 2）Tighten the screws． <br> 3）Visual check． | 1）Over $5 \mathrm{M} \Omega$ 2），3）No fault | DC 500 V class Megger |
|  | Conductor／ Wire | 1）Is the conductor rusty？ <br> 2）Is the wire coating damaged？ |  | $\begin{aligned} & \mathrm{O} \\ & \mathrm{O} \\ & \hline \end{aligned}$ |  | Visual check | No fault |  |
|  | Terminal | Is there any damage？ |  | O |  | Visual check | No fault |  |
|  | IGBT <br> Module <br> ／Diode <br> Module | Check the resistance between each of the terminals． |  |  | O | Undo the inverter connection and measure the resistance between R ， $\mathrm{S}, \mathrm{T} \Leftrightarrow \mathrm{P}, \mathrm{N}$ and $\mathrm{U}, \mathrm{V}, \mathrm{W} \Leftrightarrow \mathrm{P}$ ， N with a tester． | （Refer＇How to Check Power Components＂） | Digital Multi－ Meter／Analog Tester |
|  | Smoothing Capacitor | 1）Is there any liquid coming out？ <br> 2）Is the safety pin out，and is there any swelling？ <br> 3）Measure the capacitance． | $\begin{aligned} & \mathrm{O} \\ & \mathrm{O} \end{aligned}$ | O |  | 1），2）Visual check <br> 3）Measure with a capacitance－ measuring device． | 1），2）No fault <br> 3）Over $85 \%$ of the rated capacity | Capacitance <br> Measuring <br> Device |
|  | Relay | 1）Is there any chattering noise during operation？ <br> 2）Is there any damage to the contact |  | $\begin{aligned} & \mathrm{O} \\ & \mathrm{O} \end{aligned}$ |  | 1）Auditory check <br> 2）Visual check | No fault |  |
|  | Resistor | 1）Is there any damage to the resistor insulation？ <br> 2）Is the wiring in the resistor damaged（open）？ |  | $\begin{aligned} & \mathrm{O} \\ & \mathrm{O} \end{aligned}$ |  | 1）Visual check <br> 2）Disconnect one of the connections and measure with a tester． | 1）No fault <br> 2）Error must be within $\pm 10 \%$ the displayed resistance． | Digital Multi－ Meter／Analog Tester |
|  | Operation Check | 1）Is there any unbalance between each phases of the output voltage？ 2）Nothing must be wrong with display circuit after executing the sequence protective operation． |  | $\begin{aligned} & \mathrm{O} \\ & \mathrm{O} \end{aligned}$ |  | 1）Measure the voltage between the output terminals $\mathrm{U}, \mathrm{V}$ and W ． <br> 2）Short and open the inverter protective circuit output． | 1）The voltage balance between the phases for $200 \mathrm{~V}(400 \mathrm{~V})$ class is under 4 V （8V）． <br> 2）The fault circuit operates according to the sequence． | Digital Multi－ Meter／Rectifyin g Voltmeter |
|  | Cooling Fan | 1）Is there any abnormal oscillation or noise？ <br> 2）Is the connection area loose？ | O | O |  | 1）Turn OFF the power and turn the fan by hand． <br> 2）Tighten the connections． | 1）Must rotate smoothly． <br> 2）No fault |  |
| $\begin{aligned} & \frac{e}{2} \\ & \frac{2}{0} \\ & \hline 0 \end{aligned}$ | Meter | Is the displayed value correct？ | O | O |  | Check the meter reading at the exterior of the panel． | Check the specified and management values． | Voltmeter／ <br> Ammeter etc． |
| $\begin{aligned} & \text { O} \\ & \stackrel{0}{0} \\ & \hline \end{aligned}$ | All | 1）Are there any abnormal vibrations or noise？ <br> 2）Is there any unusual odor？ | $\begin{array}{\|l} \hline \mathrm{O} \\ \mathrm{O} \\ \hline \end{array}$ |  |  | 1）Auditory，sensory，visual check． <br> 2）Check for overheat and damage． | No fault |  |
|  | Insulation Resistor | Megger check（between the output terminals and the ground terminal） |  |  | O | Undo the U，V and W connections and tie the motor wiring． | Over $5 \mathrm{M} \Omega$ | 500 V class <br> Megger |

Note：Values in（）is for the 400 V class inverters．
Note：Life cycle of the Main components indicated above is based on continuous operation with rated load．It may vary with surrounded environment．
7.4.6 Parts replacement

| Part name | Period | Comments |
| :---: | :---: | :--- |
| Cooling fan | $2-3$ years | Exchange for a new part after consulting <br> LS A/S center. |
| Electrolytic <br> capacitor | Check for the periodic inspection for 1 <br> year. Exchange for a new part after <br> consulting LS A/S center. |  |
| Relays | - | The Recommended level to exchange a <br> capacitor in main/control circuit is 85\% <br> or less of the initial value. |
|  | Exchange for a new part after consulting <br> LS A/S center. |  |

The life expectancy of a part depends on the type of part, the environment, and operating conditions.

## CHAPTER 8 - OPTIONS

### 8.1 Option List

iP5A series is available to connect below option device.

|  | Keypad | LCD | 32 character display keypad Download and Upload available | All units |
| :---: | :---: | :---: | :---: | :---: |
|  | Remote | Remote cable | $2 \mathrm{~m}, 3 \mathrm{~m}$ and 5 m long keypad cable enables users to control the inverter from a distant area. | Optional |
|  | Dynamic braking | DB resistor | To enhance the regenerative braking performance, it makes the inverter to accelerate/decelerate rapidly. | According to inverter capacity |
|  |  | DB unit | If it need a regenerative braking, it is used with DB resistor. |  |
|  | Conduit option | Conduit for NEMA TYPE 1 | Install it to fit for NEMA TYPE 1 Enclosure or IP20. | $\begin{gathered} \hline 15 \sim 90 \mathrm{~kW} \\ (20 \sim 125 \mathrm{HP}) \end{gathered}$ |

Note) Refer to Option manuals for details.

### 8.2 External options

### 8.2.1 Keypad dimensions

1) LCD Keypad (Weight: 140 g )

8.2.2 Remote cable

| Ordering No. | Description |
| :---: | :---: |
| 051050025 | Remote cable -2 m |
| 051050026 | Remote cable -3 m |
| 051050027 | Remote cable -5 m |

### 8.2.3 DB (Dynamic Braking) Unit

Refer to DB Unit option manual for details.

1) DBU Models

| UL | Inverter | Applicable motor rating | DB Unit | Dimension |
| :---: | :---: | :---: | :---: | :---: |
| Non UL type | 200 V class | $11 \sim 15 \mathrm{~kW}(15 \sim 20 \mathrm{HP})$ | SV150DBU-2 | Group 1. <br> See 4) Dimensions |
|  |  | $18.5 \sim 22 \mathrm{Kw}$ ( $25 \sim 30 \mathrm{HP}$ ) | SV220DBU-2 |  |
|  |  | $30 \sim 37 \mathrm{~kW}(40 \sim 50 \mathrm{HP})$ | SV037DBH-2 | Group 2. <br> See 4) Dimensions |
|  |  | $45 \sim 55 \mathrm{~kW}(60 \sim 75 \mathrm{HP})$ | SV037DBH-2, 2Set |  |
|  | 400 V class | $11 \sim 15 \mathrm{~kW}(15 \sim 20 \mathrm{HP})$ | SV150DBU-4 | Group 1. <br> See 4) Dimensions |
|  |  | $18.5 \sim 22 \mathrm{~kW}(25 \sim 30 \mathrm{HP})$ | SV220DBU-4 |  |
|  |  | $30 \sim 37 \mathrm{~kW}(40 \sim 50 \mathrm{HP})$ | SV037DBH-4 | Group 2. <br> See 4) Dimensions |
|  |  | $45 \sim 55 \mathrm{~kW}$ ( $60 \sim 75 \mathrm{HP}$ ) | SV075DBH-4 |  |
|  |  | 75 kW (100 HP) |  |  |

4-M5 Mounting

5) Monitoring LEDs

The DB Unit have 3 kinds of LEDs on the frontcover. The red LED on the middle displays main power input and green LED on the right displays the braking operation. Green LED on the left displays the Over Heat Trip.

* Group 1

| LED | Description |
| :---: | :--- |
| OHT | When heat sink is overheated and the level exceeds its |
| (GREEN, | setting limit, overheat protection is activated and OHT <br> LED) |
| LED is turned ON after DBU's signal is shut off. |  |

|  | LED | Description |
| :---: | :---: | :---: |
|  | RESET | Press this switch to release OCT FAULT status. Pressing this turns the OCT LED off. |
|  | POWER <br> (GREEN) | POWER LED is turned ON upon inverter Power ON because normally it is connected to the inverter. |
|  | $\begin{gathered} \text { RUN } \\ \text { (GREEN) } \end{gathered}$ | RUN LED is blinking while DBU is operating normally by motor regenerating energy. |
|  | OHT (RED) | When heat sink is overheated and the level exceeds its setting limit, overheat protection is activated and OHT LED is turned ON after DBU's signal is shut off. |
|  | OCT (RED) | Over current trip signal. When overcurrent is flowed to the iGBT, protection function shuts off the operating signal and OCT LED is tured ON. |

* Group 3

### 8.2.4 DB Resistor

1) External DB Resistor

SV-iP5A inverters do not built-in DB resistor on Power stack as factory installation. External DB Unit and Resistor (Optional) should be installed. See the following table for more details (\%ED: 5\%, Continuous Braking Time: 15 sec ). If Enable duty ( $\% \mathrm{ED}$ ) is increased to $10 \%$, use the external DB resistor having twice Wattage rating.

| Vol | Applied motor capacity (kW / HP) | Operating rate (\%ED/Continuo us Braking Time) | 100 \% Braking Torque |  |  | 150\% Braking Torque |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | [ohm] | [W] | Type | [ohm] | [W] | Type |
| $\begin{gathered} 2 \\ 0 \\ 0 \\ \mathrm{~V} \end{gathered}$ | 0.75 / 1 | 5\%/15 sec | 200 | 100 | TYPE 1 | 150 | 150 | TYPE 1 |

* Type 1 (Max 400 Watt)

* Type 2 (Max 600 Watt)

* Type 3

### 8.2.5 Micro surge filter (Designed for Inverter-driven 400V Class motor)

In the PWM type inverter, a surge voltage attributable to wiring constants is generated at the motor terminals.
Especially for a 400 V class motor, the surge voltage may deteriorate the insulation. When the 400 V class motor is driven by the inverter, consider the following measures:

■ Rectifying the motor insulation
For the 400 V class motor, use an insulation-rectified motor. Specifically, the " 400 V class inverter-driven, insulation-rectified motor".
For the dedicated motor such as the constant-torque motor and low-vibration motor, use the "inverter-driven, dedicated motor".

■ Suppressing the surge voltage on the inverter output side
On the secondary side of the inverter, connect the optional surge voltage suppression filter to reduce the motor terminal voltage less than 850 V .

■ Wiring

- Caution

Check the Input/Output when wiring the filter.
Wiring distance from inverter output to filter input should not exceed 5 meter.
Wiring distance from filter to motor should not exceed 150 meter.

### 8.2.6 NEMA TYPE 1 Optional Conduit Box

1) NEMA TYPE 1 Enclosure for conduit connection

## General

NEMA TYPE 1 Conduit Box: This kit enables an inverter to be installed on the wall without the inverter panel and meets NEMA Type 1. It should be installed to meet NEMA 1 for $15 \sim 90 \mathrm{~kW}$ UL Open Type inverters. However, installing this option does not mean UL Type 1. Please purchase Standard UL Type 1 models if needed.
Installation:
Remove the metal plate on the bottom with the driver and install this kit on to the same place by the screws from the metal plate.

[Conduit box for 20~25 HP (15~18.5kW) iP5A]

[Conduit box for 30~40 HP (22~30 kW) iP5A]

[Conduit box for $50 \sim 75 \mathrm{HP}(37 \sim 55 \mathrm{~kW}) \mathrm{iP} 5 \mathrm{~A}$ ]

[Conduit box for 50~75 HP (75~90kW) iP5A]

- Conduit Hole Size

| Inverter | Conduit hole for control terminal | Trade Size of the Conduit |
| :---: | :---: | :---: |
|  | Conduit hole for power terminal |  |
| $\begin{gathered} \text { SV008~055iP5A } \\ -2 / 4 \end{gathered}$ | 24 (0.98) | 16 (1/2) |
|  | 24 (0.98) | 16 (1/2) |
| SV075iP5A-2/4 | 24 (0.98) | 16 (1/2) |

|  | 50 (1.96) | 41 (3/2) |
| SV300iP5A-2/4 | 50 (1.96) | 41 (3/2) |
|  | 50 (1.96) | 41 (3/2) |
| SV370iP5A-2/4 | 22(0.86) | 16(1/2) |
|  | 51(2.00) | 41(3/2) |
| SV450iP5A-2/4 | 22(0.86) | 16(1/2) |
|  | 51(2.00) | 41(3/2) |
| SV550iP5A-2/4 | 22(0.86) | 16(1/2) |
|  | 51(2.00) | 41(3/2) |
| SV750iP5A-2/4 | 22(0.86) | 16(1/2) |
|  | 76(2.99) | 63(5/2) |
| SV900iP5A-2/4 | 22(0.86) | 16(1/2) |
|  | 76(2.99) | 63(5/2) |

Note: Choose the proper size of the Locknut, Bushing corresponding to trade size of the Conduit in use.

## CHAPTER 9 - RS485 COMMUNICATION

### 9.1 Introduction

Inverter can be controlled and monitored by the sequence program of the PLC or other master module. Drives or other slave devices may be connected in a multi-drop fashion on the RS-485 network and may be monitored or controlled by a single PLC or PC. Parameter setting and change are available through PC

### 9.1.1 Features

Inverter can be easily applied for Factory automation because Operation and monitoring is available by Userprogram.

* Parameter change and monitoring is available via computer.
(Ex: Accel/Decel time, Freq. Command etc.)
* Interface type of RS485 reference:

1) Allows the drive to communicate with any other computers.
2) Allows connection of up to 31 drives with multi-drop link system.
3) Noise-resistant interface.
9.1.2 Connection guide for RS485 communication with PC , PLC and RS232/485

* REPEATER is not a required item but helps communication in long-distance communication or high noise environment

### 9.1.3 Before installation

Before installation and operation, this should be read thoroughly. If not, it can cause personal injury or damage to other equipment.

### 9.2 Specification

9.2.1 Performance specification

| Item | Specification |
| :--- | :--- |
| Transmission form | Bus method, Multi-drop Link System |
| Applicable inverter | SV-iP5A series |
| Connectable drives | Max 31 |
| Transmission distance | Max. 1,200m (Within 700m Recommended) |
| Recommended wire | $0.75 \mathrm{~mm}^{2}(12 \mathrm{AWG})$, Shield Type Twisted-Pare Wire |

9.2.2 Hardware specification

| Item |  |
| :--- | :--- |
| Installation | Use C+, C-,CM terminals on control terminal block |
| Power supply | Use Insulated power from the inverter power supply |

| 2.3 Communication specification |  |
| :---: | :---: |
| Item | Specification |
| Communication speed | 19,200/9,600/4,800/2,400/1,200 bps selectable |
| Communication system | Half duplex system |
| Character system | ASCII (8 bit) |
| Stop bit length | 1 bit |
| Sum check (CRC16) | 2 byte |
| Parity bit | None |
| Protocol supported | Parameter Read/Write, Monitoring parameter register/execution Broadcasting |

### 9.2.4 Installation

$\square$ Connecting the communication line

1) Connect the RS485 communication line to the inverter's (C+), (C-) and CM terminals of the control terminals.
2) Connect the CM terminal among inverters for stable communication.
3) Check the connection and turn ON the inverter.
4) If the communication line is connected correctly set the communication-related parameters as the following.
5) Install a repeater to upgrade the communication speed or longer than 1200 mm communication line is used.

Repeater is required for upgrading communication quality in the noise-high environment.
$\square$ Communication parameters

| Code | Display | Name | Set value | Unit | Default |
| :---: | :---: | :---: | :---: | :---: | :---: |
| DRV_03 | Drive mode | Drive mode | Int. 485 |  | Fx/Rx-1 |
| DRV_04 | Freq mode | Freq mode | Int. 485 |  | KeyPad-1 |
| DRV_91 | Drive mode2 | Drive mode 2 | KeyPad Fx/Rx-1 Fx/Rx-2 |  | Fx/Rx-1 |
| DRV_92 | Freq mode2 | Freq mode 2 | ```KeyPad-1 KeyPad-2 V1 V1S I V1+I Pulse``` |  | KeyPad-1 |
| I/O_20~27 | M1 ~ M8 | Programmable Digital Inputs | Main-drive |  |  |
| I/O_90 | Inv No | Inverter number | 1~250 |  | 1 |
| I/O_91 | Baud rate | Communication speed | $\begin{aligned} & 1200 \mathrm{bps} \\ & 2400 \mathrm{bps} \\ & 4800 \mathrm{bps} \\ & 9600 \mathrm{bps} \\ & 19200 \mathrm{bps} \end{aligned}$ |  | 9600 bps |
| I/O_92 | COM Lost Cmd | Operating mode when communication signal is lost | None FreeRun Stop |  | None |
| I/O_93 | COM Time Out | Time to determine whether <br> Communication signal is lost. | 0.1~120.0 | sec | 1.0 |
| I/O_94 | Delay Time | Delay time of communication response | $1 \sim 1200$ | msec | 5 |

### 9.3 Operation

### 9.3.1 Operating steps

1) Check whether the computer and the inverter are connected correctly.
2) Turn ON the inverter. But, do not connect the load until stable communication between the computer and the inverter is verified. Start the operating program for the inverter from the computer.
3) If computer is a master, computer does not have RS485 port. RS232-485 converter is needed to communicate. The communication is delayed at transmitting/receiving when the RS232-485 converter is used. If delay is happened, retry the communication by increasing the I/O-94 [Delay Time].
4) Operate the inverter using the operating program for the inverter.
5) Refer to "13.8 Troubleshooting" if the communication is not operating normally.
6) User program or the "DriveView" program supplied from LSIS can be used as the operating program for the inverter.
7) Turn the inverter J 3 switch ON to connect the terminating resistor for the end of network.

* Connect to C+,C-,CM terminal on the control terminal. Be careful for the polarity(+, -).
* Max connectable inverter is 31 .

### 9.4 Communication protocol (RS485)

The configuration of RS485 is that PC or PLC is the Master and Inverter Slave.
Inverter responds the Master's Read/Write Requests.
When master sends Write Request to Inverter address \# 255, all inverters perform Write action but do not return a Acknowledge response. This is used to drive multiple inverters at the same time via RS485.

### 9.4.1 Basic format

1) Command message (Request):

| ENQ | Inverter No. | CMD | Data | SUM | EOT |
| :---: | :---: | :---: | :--- | :--- | :--- |
| 1 byte | 2 bytes | 1 byte | $n$ bytes | 2 bytes | 1 byte |

* Normal response (Acknowledge Response):

| ENQ | Inverter No. | CMD | Data | SUM | EOT |
| :--- | :---: | :--- | :--- | :--- | :--- |
| 1 byte | 2 bytes | 1 byte | $\mathrm{n} * 4$ <br> bytes | 2 bytes | 1 byte |

* Negative response (Negative Acknowledge Response)

| ENQ | Inverter No. | CMD | Data | SUM | EOT |
| :---: | :---: | :---: | :--- | :--- | :--- |
| 1 byte | 2 bytes | 1 byte | 2 bytes | 2 bytes | 1 byte |

2) Description:

* Request starts with "ENQ" and ends with "EOT"
* Acknowledge Response starts with "ACK" and ends with "EOT"
* Negative Acknowledge Response starts with "NAK" and ends with "EOT".
* "Inverter Number" is the number of Inverters used and indicated in 2 byte ASCII-HEX.
(ASCII-HEX: Hexadecimal consists of ' 0 ' ~ ' 9 ', 'A' ~ 'F)
* CMD: Capital letter ("IF Error" when small letter is used.)

$|$| Character | ASCII-HEX | Command |
| :---: | :---: | :---: |
| 'R' | 52 h | Read |
| 'W' | 57 h | Write |
| ' $\mathrm{X}^{\prime}$ | 58 h | Request for monitoring registration |
| ' Y ' | 59 h | Execution for monitoring registration |

- Data: ASCII-HEX

Ex) when data value is 3000 : $3000(\mathrm{dec}) \rightarrow$ ' 0 ' 'B' 'B' ' 8 'h $\rightarrow 30 \mathrm{~h} 42 \mathrm{~h} 42 \mathrm{~h} 38 \mathrm{~h}$

- Error code: ASCII (20h~7Fh)
- Receive/Send buffer size: Receive= 39 byte, Send=44 byte
- Monitor register buffer: 8 Word
- SUM: to check the communication error SUM = ASCII-HEX format of lower 8 bit of (Inverter No. + CMD + DATA)
Ex) Command Message (Request) for reading one address from address " 9000 "

| ENQ | Inverter <br> No. | CMD | Address | Number of <br> address to read | SUM | EOT |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 05 h | $" 01 "$ | "R" | $" 9000 "$ | $" 1 "$ | $" A D "$ | 04 h |
| 1 byte | 2 bytes | 1 byte | 4 bytes | 1 byte | 2 bytes | 1 byte |

SUM $={ }^{\prime} 0{ }^{\prime}+{ }^{\prime} 1{ }^{\prime}+{ }^{\prime}$ R' $+{ }^{\prime} 9{ }^{\prime}+{ }^{\prime} 0{ }^{\prime}+{ }^{\prime} 0{ }^{\prime}+{ }^{\prime} 0{ }^{\prime}+{ }^{\prime} 1$ '
$=30 \mathrm{~h}+31 \mathrm{~h}+52 \mathrm{~h}+39 \mathrm{~h}+30 \mathrm{~h}+30 \mathrm{~h}+30 \mathrm{~h}+31 \mathrm{~h}$
$=1 \mathrm{ADh}$ (except for ENA/ACK/EOT value)
9.4.2 Detail communication protocol

1) Request for Read: Request for read successive ' N ' numbers of WORD from address "XXXX"

| ENQ | Inv No | CMD | Address | Number of <br> Address | SUM | EOT |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 05 h | $" 01 " \sim$ <br> $" F A "$ | $" \mathrm{R} "$ | $" X X X X "$ | $" 1 " \sim " 8=\mathrm{n}$ | $" X X "$ | 04 h |
| 1 byte | 2 byte | 1 byte | 4 byte | 1 byte | 2 byte | 1 byte |

Total byte $=12$
The quotation marks (" ") mean character.
1.1) Acknowledge Response:

| ACK | Inv No | CMD | Data | SUM | EOT |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 06 h | $" 01 " \sim$ "FA" | "R" | "XXXX" | "XX" | 04 h |
| 1 byte | 2 byte | 1 byte | $\mathrm{N} * 4$ byte | 2 byte | 1 byte |

Total byte $=7$ * $\mathrm{n} * 4=$ Max. 39
1.2) Negative Acknowledge Response:

| NAK | Inv No | CMD | Error code | SUM | EOT |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 15 h | $" 01 " \sim$ "FA" | "R" | $" * * "$ | $" X X "$ | 04 h |
| 1 byte | 2 byte | 1 byte | 2 byte | 2 byte | 1 byte |

Total byte $=9$
2) Request for Write:

| ENQ | Inverter No | CMD | Address | Number of <br> Address | SUM | EOT | EOT |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 05 h | $" 01 " \sim$ <br> $" F A "$ | $" \mathrm{~W} "$ | $" X X X X "$ | $" 1 " \sim " 8 "=n$ | "XXXX.. <br> $"$ | $" X X "$ | 04 h |
| 1 byte | 2 byte | 1 byte | 4 byte | 1 byte | $\mathrm{n} * 4$ byte | 2 byte | 1 <br> byte |

Total byte $=12+\mathrm{n} * 4=$ Max. 44
2.1) Acknowledge response:

| ACK | Inverter No. | CMD | Data | SUM | EOT |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 06 h | $" 01 " \sim$ "FA" | $" \mathrm{~W} "$ | $" X X X X . . . "$ | $" X X "$ | 04 h |
| 1 byte | 2 byte | 1 byte | $\mathrm{n} * 4$ byte | 2 byte | 1 byte |

Total byte $=7+n * 4=$ Max. 39
Note) When Request for Write and Acknowledge Response is exchanged between PC and Inverter for the first time, previous data is returned. From the second time of transmission, the current data will be received.
2.2) Negative response:

| NAK | Inverter No. | CMD | Error code | SUM | EOT |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 15 h | $" 01 " \sim$ "FA" | $" \mathrm{~W} "$ | $" * * "$ | $" X X "$ | 04 h |
| 1 byte | 2 byte | 1 byte | 2 byte | 2 byte | 1 byte |

Total byte $=9$
3) Request for Monitor Register: This is useful when constant parameter monitoring and data updates are required.
Request for Register of ' $n$ ' numbers of Address (non-successive)

| ENQ | Inverter No. | CMD | Number of Address | Address | SUM | EOT |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 05 h | $" 01 " \sim$ "FA" | $" X "$ | $" 1 " \sim " 8 "=\mathrm{n}$ | $" X X X X \ldots . . "$ | $" X X "$ | 04 h |
| 1 byte | 2 byte | 1 byte | 1 byte | $\mathrm{n} * 4$ byte | 2 byte | 1 byte |

$$
\text { Total byte }=8+\mathrm{n} * 4=\operatorname{Max} 40
$$

3.1) Acknowledge Response:

| ACK | Inverter No. | CMD | SUM | EOT |
| :---: | :---: | :---: | :---: | :---: |
| 06 h | $" 01 " \sim " F A "$ | $" X "$ | $" X X "$ | 04 h |
| 1 byte | 2 byte | 1 byte | 2 byte | 1 byte |

$$
\text { Total byte }=7
$$

3.2) Negative Acknowledge Response

| NAK | Inverter No. | CMD | Error code | SUM | EOT |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 15 h | $" 01 " \sim$ "FA" | $" X "$ | $" * * "$ | $" X X "$ | 04 h |
| 1 byte | 2 byte | 1 byte | 2 byte | 2 byte | 1 byte |

Total byte $=9$
4) Execution Request for monitor register: Request for read of address registered by monitor register.

| ENQ | Inverter No. | CMD | SUM | EOT |
| :---: | :---: | :---: | :---: | :---: |
| 05 h | " 10 " "FA" | "Y" | "XX" | 04 h |
| 1 byte | 2 byte | 1 byte | 2 byte | 1 byte |

Total byte $=7$
4.1) Acknowledge response:

| ACK | Inverter No. | CMD | Data | SUM | EOT |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 06 h | $" 01 " \sim$ "FA" | "Y" | "XXXX..." | "XX" | 04 h |
| 1 byte | 2 byte | 1 byte | $\mathrm{n} * 4$ byte | 2 byte | 1 byte |

Total byte $=7+\mathrm{n}^{*} 4=\operatorname{Max} 39$
4.2) Negative response:

| NAK | Inverter No. | CMD | Error code | SUM | EOT |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 15 h | $" 01 " \sim$ "FA" | $" Y "$ | $" * * "$ | $" X X "$ | 04 h |
| 1 byte | 2 byte | 1 byte | 2 byte | 2 byte | 1 byte |

Total byte $=9$

* Request for Monitor Register should be made before Execution Request for monitor register. If inverter power is turned off, monitor register is cleared so redo the request for monitor register when Power ON.

5) Error code

| Error <br> code | Description |
| :---: | :--- |
| IF | ILLEGAL FUNCTION <br> When master is sending codes other than Function code (R, W, X, Y). |
| IA | ILLEGAL ADDRESS <br> - When parameter address does not exist |
| ID | ILLEGAL VALUE <br> - When Data contains an out of range value for an inverter parameter <br> during 'W' (Write). |
| WM | WRITE MODE ERROR <br> - When the requested data cannot be changed (written) during 'W' <br> (Write) such as Read Only, Not adjustable during Run parameters. |

### 9.5 Parameter code list

<Common area>: Area accessible regardless of inverter models (Note 3)

| Address | Parameter | Unit | Unit | R/W | Data value |
| :---: | :---: | :---: | :---: | :---: | :---: |

| 0x0012 | V1 | $0 \sim 10 \mathrm{~V}$ |  | R |  |
| 0x0013 | V2 | 0~10V |  | R |  |
| 0x0014 | I | 0~20mA |  | R |  |

| Address | Parameter | Unit | Unit | R/W | Data value |
| :---: | :---: | :---: | :---: | :---: | :--- |
| 0x0015 | RPM |  |  | R |  |
| 0x001A | Unit display |  |  | R | $0: \mathrm{Hz}, 1: \mathrm{Rpm}$ |
| 0x001B | Pole number |  |  | R |  |
| 0x001C | Custom Version |  |  | R |  |

Note 1) Detail description on Common area address 0x0006

| Bit | Value | R/W | Name | iption |
| :---: | :---: | :---: | :---: | :---: |
| 0 | 0x01 | R/W | Stop | Issue a Stop command via communication ( $0->1$ ) <br> Issue a Forward run command via communication ( $0->1$ ) <br> Issue a Reverse run command via communication ( $0->1$ ) <br> Issue a Fault reset command via communication ( $0->1$ ) <br> Issue a Emergency stop command via communication ( $0->1$ ) <br> Not Used <br> 0 (Terminal), 1 (keypad), 2 (option), 3 (Int. 485) <br> A. When operating command is issued via Terminal, Keypad or Option <br> 0: DRV-00, 1: Not used, <br> 2 : Multi-step speed 1, <br> 4 : Multi-step speed 3 <br> 5 : Multi-step speed 4, <br> 7 : Multi-step speed 6 <br> 8 : Multi-step speed 7, <br> 10 : Multi-step speed 9 <br> 11: Multi-step speed 10, <br> 12: Multi-step speed 11, <br> 13: Multi-step speed 12 <br> 14: Multi-step speed 13, 15 : Multi-step speed 14 , <br> 16 : Multi-step speed 15, <br> 17 :Up, 18 : Down, $\quad$ 19: Up/Down Zero <br> 20~21 : RESERVE |
| 1 | 0x02 | R/W | Forward run |  |
| 2 | 0x04 | R/W | Reverse run |  |
| 3 | 0x08 | R/W | Fault reset |  |
| 4 | 0x10 | R/W | Emergency stop |  |
| 5 |  |  | Not used |  |
| 6~7 |  | R | Operating command |  |
| 8~14 |  | R | Frequency command |  |
| 15 | 0x8000 | R | Network error | Network malfunction |

9.5.1 iP5A operating status in Address E, Common area

Output frequency

Forward Run command
Reverse Run command
Accelerating
Decelerating
Speed arrival
Stopping
Stop
Forward running
Reverse running

< iP5A Address usage area by groups >

| DRV | $9100-91 \mathrm{FF}$ |
| :---: | :---: |
| FU1 | $9200-92 \mathrm{FF}$ |
| FU2 | $9300-93 \mathrm{FF}$ |
| I/O | $9400-94 \mathrm{FF}$ |
| EXT | $9500-95 \mathrm{FF}$ |
| COM | $9600-96 \mathrm{FF}$ |
| APP | $9700-97 \mathrm{FF}$ |

Address setting method to access the parameter using RS485: area assigned by inverter+ Address usage area by groups + Code no. (Hex).

Ex) To check the content of I/O-93 [COM Time Out], perform Read or Write the address 0x945D.

### 9.6 Troubleshooting

Refer to the below chart when RS485 communication error occurs.

9.7 ASCII Code List

| Character | Hex | Character | Hex | Character | Hex |
| :---: | :---: | :---: | :---: | :---: | :---: |

## 3. OVER LOAD PROTECTION

IOLT: IOLT(Inverter Overload Trip) protection is activated at $110 \%$ of the inverter rated current for 1 minute and greater.

## Warning!

If the occurrence of IOLT is happened, Trip will be continued during 1 minute for the cooling of the inverter. In case of 600 V product, the operation time of IOLT will be reduced at above 600 Vac .

OLT : Inverter shuts off its output when inverter output current exceeds its overload trip level for overload trip time. OLT is selected when FU1-66 [Overload Trip Selection] is set to "Yes" and activated at 120\% of FU1-67 [Overload Trip Level] for 60 sec set in FU1-68 [Overload Trip Delay Time].

## 4. OVER SPEED PROTECTION

Not Provided With Overspeed Protection.

## 5. FIELD WIRING TERMINAL

1) Use copper wires only with $600 \mathrm{~V}, 75^{\circ} \mathrm{C}$ ratings
2) Tightening torque of power terminal blocks

| Inverter Capacity [kW] |  | $\begin{aligned} & \text { Terminal } \\ & \text { Screw } \\ & \text { Size } \end{aligned}$ | Screw Torque ${ }^{1}$ |  | Wire ${ }^{2}$ |  |  |  |

|  | 110 | M12 | 182.4~215.0 | 158.3~186.6 | 100 | 100 | 4/0 | 4/0 |

Apply the rated torque to terminal screws. Loose screws can cause of short circuit or malfunction. Tightening the screws too much can damage the terminals and cause a short circuit or malfunction.
3) For $7.5 \sim 11 \mathrm{~kW} 240 \mathrm{~V}$ type inverters, Input and motor output terminal blocks are intended only for use with ring type connectors.
6. BASIC WIRING

2) Use terminal V1 for V1, V1S (0~12V, -12~12V) input

## APPENDIX B-PERIPHERAL DEVICES

## APPENDIX C- RELATED PARAMETERS

| Use | Related parameter codes |
| :--- | :--- |
| Accel/Decel time, Pattern Adjustment | DRV-01 [Acceleration Time], DRV-02 [Deceleration Time], <br> FU1-02 [Acceleration Pattern], FU1-03 [Deceleration Pattern] |
| Reverse Rotation Prevention | FU1-01 [Forward/Reverse Prevention] |
| Accel/Decel at Continuous Rating Range | FU1-02 [Acceleration Pattern], FU1-03 [Deceleration Pattern] |
| Braking Operation Adjustment | FU1-20 [Starting Mode], FU1-21~22 [DC Injection Braking <br> at Starting] <br> FU1-23 [Stop Mode], FU1-24~27 [DC Injection Braking], |
| Operations at freq. Over 60 Hz | FU1-30 [Max. Frequency], <br> FU1-35 [Frequency High Limit], |
| I/O-05 [Frequency Corresponding to V1 Max Voltage], |  |
| Selecting an Appropriate Output | I/O-10 [Frequency Corresponding to I Max Current], <br> I/O-16 [Frequency Corresponding to P Pulse Input Max Freq.] |
| Characteristics for the Load | FU1-30 [Max. Frequency], FU1-31 [Base Frequency] |
| Operation via Communication with a PC | I/O-90 [Inverter Number], I/O-91 [Communication Speed], <br> I/O-92~93 [Lost Command] |
| Output Frequency Limit | FU1-32 [Starting Frequency], <br> Frequency Meter Calibration Adjustment |
| FU1-71[Stall Prevention], |  |
| FU2-67~69 [Torque Boost], |  |
| Motor Overheat Protection | FU2-40 [Motor Select] |

## DECLARATION OF CONFORMITY

Council Directive(s) to which conformity is declared:

CD 73/23/EEC and CD 89/336/EEC

Units are certified for compliance with:

> EN 61800-3/A11 (2000)
> EN 61000-4-2/A2 (2001)
> EN 61000-4-3/A2 (2001)
> EN 61000-4-4/A2 (2001)
> EN 61000-4-5/A1 (2001)
> EN 61000-4-6/A1 (2001)
> EN 55011/A2 (2002)
> IEC/TR 61000-2-1 (1990)
> EN 61000-2-4 (2002)
> EN 60146-1-1/A1 (1997)
> EN $50178(1997)$

| Type of Equipment: | Inverter (Power Conversion Equipment) |

## TECHNICAL STANDARDS APPLIED

The standards applied in order to comply with the essential requirements of the Directives 73/23/CEE "Electrical material intended to be used with certain limits of voltage" and 89/336/CEE
"Electromagnetic Compatibility" are the following ones:

| - EN 50178 (1997) | "Electronic equipment for use in power installations". |
| :---: | :---: |
| -EN 61800-3/A11 (2000) | "Adjustable speed electrical power drive systems. Part 3: EMC product standard including specific methods" |
| - EN 55011/A2 (2002) | "Industrial, scientific and medical (ISM) radio-frequency equipment. Radio disturbances characteristics. Limits and methods of measurement" |
| -EN 61000-4-2/A2 (2001) | "Electromagnetic compatibility (EMC). Part 4: Testing and measurement techniques. Section 2: Electrostatic discharge immunity test. |

LS inverters, iP5A series

## RFI FILTERS

THE L.S. RANGE OF POWER LINE FILTERS FF ( Footprint) - FE (Standard) SERIES, HAVE BEEN SPECIFICALLY DESIGNED WITH HIGH FREQUENCY LS INVERTERS THE USE OF L.S. FILTERS, WITH THE INSTALLATION ADVICE OVERLEAF HELP TO ENSURE TROUBLE FREE USE ALONG SIDE SENSITIVE DEVICES AND COMPLIANCE TO CONDUCTED EMISSION AND IMMUNITY STANDARS TO EN 50081 -> EN61000-6-3:02 and EN61000-6-1:02

## CAUTION

IN CASE OF A LEAKAGE CURRENT PROTECTIVE DEVICES IS USED ON POWER SUPPLY, IT MAY BE FAULT AT POWER-ON OR OFF. IN AVOID THIS CASE, THE SENSE CURRENT OF PROTECTIVE DEVICE SHOULD BE LARGER THAN VALUE OF LAKAGE CURRENT AT WORST CASE IN THE BELOW TABLE.

## RECOMMENDED INSTALLATION INSTRUCTIONS

To conform to the EMC directive, it is necessary that these instructions be followed as closely as possible. Follow the usual safety procedures when working with electrical equipment. All electrical connections to the filter, inverter and motor must be made by a qualified electrica technician.

1-) Check the filter rating label to ensure that the current, voltage rating and part number are correct.
2-) For best results the filter should be fitted as closely as possible to the incoming mains supply of the wiring enclousure, usually directly after the enclousures circuit breaker or supply switch

3-) The back panel of the wiring cabinet of board should be prepared for the mounting dimensions of the filter. Care should be taken to remove any paint etc... from the mounting holes and face area of the panel to ensure the best possible earthing of the filter

4-) Mount the filter securely.
5-) Connect the mains supply to the filter terminals marked LINE, connect any earth cables to the earth stud provided. Connect the filter terminals marked LOAD to the mains input of the inverter using short lengths of appropriate gauge cable.
6-) Connect the motor and fit the ferrite core (output chokes ) as close to the inverter as possible. Armoured or screened cable should be used with the 3 phase conductors only threaded twice through the center of the ferrite core. The earth conductor should be securely earthed at both inverter and motor ends. The screen should be connected to the enclousure body via and earthed cable gland

7-) Connect any control cables as instructed in the inverter instructions manual

IT IS IMPORTANT THAT ALL LEAD LENGHTS ARE KEPT AS SHORT AS POSSIBLE AND THAT INCOMING MAINS AND OUTGOING MOTOR CABLES ARE KEPT WELL SEPARATED.

Warranty period is 12 months after installation or 18 months after manufactured when the installation date is unidentified. However, the guarantee term may vary on the sales term.

## ■ IN-WARRANTY service information

If the defective part has been identified under normal and proper use within the guarantee term, contact your local authorized LS distributor or LS Service center.

- OUT-OF WARRANTY service information

The guarantee will not apply in the following cases, even if the guarantee term has not expired.

- Damage was caused by misuse, negligence or accident.
- Damage was caused by abnormal voltage and peripheral devices' malfunction (failure).
- Damage was caused by improper repair or altering by other than LS authorized distributor or service center.
- Damage was caused by an earthquake, fire, flooding, lightning, or other natural calamities.
- When LS nameplate is not attached.
- When the warranty period has expired.

## Revision History

| No. | Date | Edition | Changes |
| :---: | :---: | :---: | :---: |
